

ملاحظات متنوعة

Antagonist muscle: when it works, the prime should be relaxed.

Synergist: Prevents some unwanted movements.

Fixator:

تعمل عمل خاص بها ولكن تعمل كمساعدة للقيام بعمل آخر لعضلة أخرى.

Biologically active amino acids:

1) Neurotransmitter.

2) Hormones.

There are 20 types of amino acids:

8 Hydrophobic amino acid

12 Hydrophilic amino acid

Sympathetic activity:

للهدم

Parasympathetic activity:

للبناء

- Most connective tissues are **vascular**.
- Parasympathetic **cannot** supply sweat gland.
- Preganglionic neuron is **faster** than postganglionic neuron in the case of Sympathetic system.
