

ANATOMY TEAM

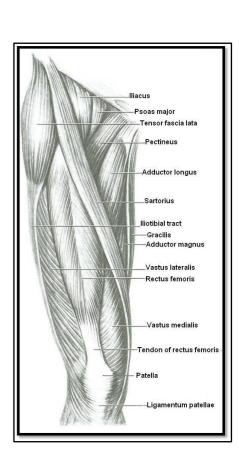

LECTURE (15)
MEDIAL AND ANTIRIOR
COMPRTMENTS OF THE
THIGH

Medial and anterior Compartments of the Thigh

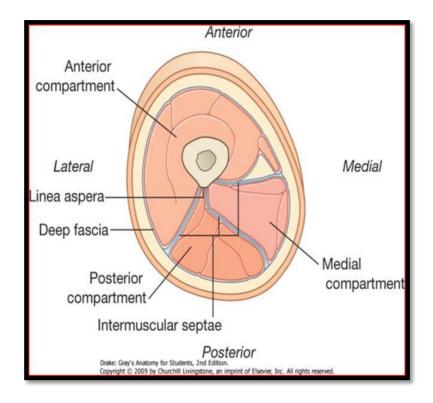

تنويه / هذا العمل لا يعتبر مصدر أساسي للمذاكره وإنما هو للمراجعه فقط والمصدر الاساسي هو السلايدز ، وقد تم التأكد بأنه لا يوجد أي اختلاف بين سلايدز الأولاد والبنات "ماعدا بعض النقاط وسيتم ذكر ها "

At the end of this lecture, the student should be able to:

- List the name of muscles of anterior compartment of thigh.
- Describe the anatomy of muscles of anterior compartment of thigh regarding: origin, insertion, nerve supply and actions.
- List the name of muscles of medial compartment of thigh.
- Describe the anatomy of muscles of medial compartment of thigh regarding: origin, insertion, nerve supply and actions.
- Describe the location, boundaries and contents of femoral triangle & adductor canal.

Deep fascia of the femur extends to form three intramuscular septa. The septa divide the thigh into three compartments: **Anterior**, **Posterior**, **and Medial**.

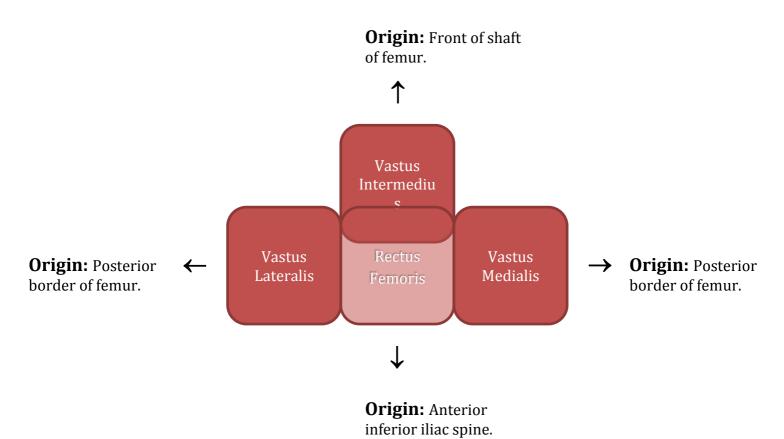

Posterior Compartment: Hamstring, (Flex the knee and extend the hip). Supplied by **Sciatic Nerve**.

♦ The Anterior Compartment of the Thigh

Supplied by the Femoral Nerve

1. Knee Extensors: (Quadriceps Femoris)

Insertion of Quadriceps Femoris: Into patella to the tuberosity of

the tibia through ligamentum patellae

Action: Extension of the hip.

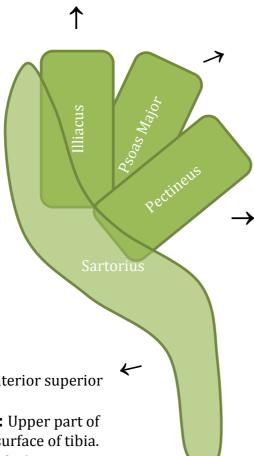

2. Hip Flexors:

Origin: Illiac fossa. **Insertion:** Lesser trochanter of the

femur.

Action: Flexion of

the hip joint.

Origin: T12 and lumbar vertebrae. **Insertion:** Lesser trochanter of the femur. **Action:** flexion of hip

joint.

Origin: Superior pubic

ramus.

Insertion: Back of femur (below lesser trochanter). Action: Flexion and adduction of the hip joint.

Origin: Anterior superior

iliac spine.

Insertion: Upper part of the medial surface of tibia.

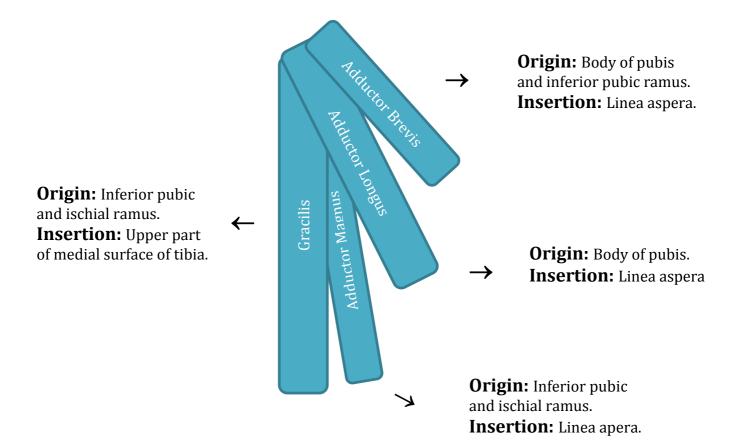

Action: Tailor's Position

 \rightarrow Hip flexed and abducted, Knee is flexed.

> In less than 50 percent of humans, the psoas is accompanied by the **psoas minor**. It is located in front of the psoas major muscle.

♦ The Medial Compartment of the Thigh

Supplied by the Obturator Nerve

Action: Adduction of the hip joint * Gracilis also flexes the knee joint.

♦ Femoral Triangle

A deep hollow in the upper third of the front of the thigh, inferior to the **inguinal ligament**.

Boundaries:

Base: Inguinal ligament

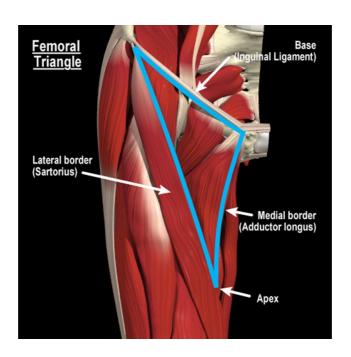

Medial: Medial border of the adductor longus muscle

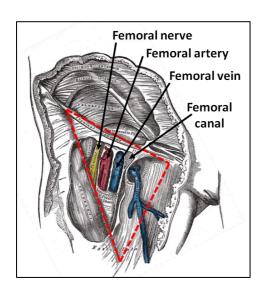

Lateral: Medial border of Sartorius muscle

Floor: Adductor longus, pectineus, psoas major, iliacus

(MEDIAL TO LATERAL).

Roof: Skin, superficial and deep fascia.

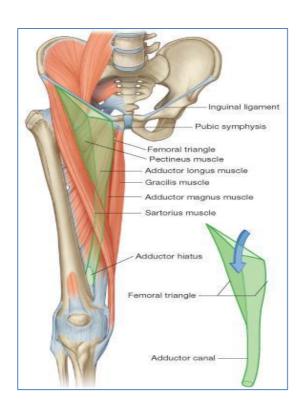

Contents of the triangle:

- 1. Femoral Nerve and its branches.
- 2. Femoral sheath: (lateral to medial)
 - Femoral artery.
 - Femoral vein.
 - Femoral canal (lymphatic vessels and some deep inguinal lymph nodes).

♦ Adductor Canal

An aponeurotic tunnel for femoral artery and vein **in** the middle of front of thigh, deep to Sartorius muscle. It **extends** from the apex of the femoral triangle to adductor hiatus. *Also called Subsartorila or Hunter's Canal.

Boundaries:

Roof (Anterior): Sartorius, medially, and vastus medialis, laterally.

Floor (Posterior): Adductor longus and magnus.

موجود عند البنات فقط

In less than 50 percent of humans the psoas major is accompanied by the *psoas minor*. It is located in front of the psoas major *muscle*.

ORIGIN:

Psoas major: T12 & lumbar

vertebrae

Iliacus: Iliac fossa

- Femoral triangle is: It is a deep hollow in the Upper third of front of thigh inferior to the inguinal ligament
- Adductor canal is also called (subsartorial/hunter's canal)

موجود عند الأولاد فقط

- □ ORIGIN OF Rectus femoris: Anterior inferior iliac spine (Hip bone)
- ☐ Which one of the following muscles is inserted into the tibia?
- 1. Sartorius
- 2. Pectineus
- 3. Iliacus
- 4. Adductor longus
- ☐ Which one of the following muscles is supplied by femoral nerve?
- 1. Sartorius
- 2. Gracilis
- 3. Adductor longus
- 4. Adductor brevis

SUMMARY

MUS	CLES OF ANTERI COMPARTMENT OF THIGH:
	Flexors of hip: Sartorius, pectineus, psoas major &
	iliacus (all are inserted into femur EXCEPT :
	Sartorius: inserted into tibia)
N.E	3.: Tailor's position performed by sartorius: flexion,
abdu	ction & lateral rotation of hip + flexion of knee.
	Extensors of knee: Quadriceps femoris
	All parts originate from femur EXCEPT: Rectus femoris: from hip
	All parts are inserted into patella
	-
_	NERVE SUPPLY: femoral nerve
MUS	CLES OF MEDIAL COMPARTMENT OF THIGH:
MUS	CLES OF MEDIAL COMPARTMENT OF THIGH: ACTION:
MUSO 1.	CLES OF MEDIAL COMPARTMENT OF THIGH: ACTION: All muscles adduct hip joint.
MUS 1. 2.	CLES OF MEDIAL COMPARTMENT OF THIGH: ACTION: All muscles adduct hip joint. Gracilis also flexes knee joint.
MUS 1. 2.	CLES OF MEDIAL COMPARTMENT OF THIGH: ACTION: All muscles adduct hip joint.
MUS 1. 2.	CLES OF MEDIAL COMPARTMENT OF THIGH: ACTION: All muscles adduct hip joint. Gracilis also flexes knee joint.
MUS(1. 2	CLES OF MEDIAL COMPARTMENT OF THIGH: ACTION: All muscles adduct hip joint. Gracilis also flexes knee joint. ATTACHMENTS:
MUS(1. 2. 1. 2.	CLES OF MEDIAL COMPARTMENT OF THIGH: ACTION: All muscles adduct hip joint. Gracilis also flexes knee joint. ATTACHMENTS: All muscles originates from pubic bone.

Quiz

- 1. What muscle is responsible for Tailor's position?
 - a. Rectus Femoris
 - b. Sartorius
 - c. Gracilis
 - d. Pectineus
- 2. Vastus medialis is supplied by:
 - a. Obturator Nerve
 - b. Sciatic Nerve
 - c. Axillary Nerve
 - d. Femoral Nerve
- 3. All the muscles listed below are inserted into Linea aspera <u>EXCEPT:</u>
 - a. Gracilis
 - b. Adductor brevis
 - c. Adductor longus
 - d. Adductor mungus
- 4. Which one forms the base of the femoral triangle?
 - a. Medial border of the Sartorius muscle
 - b. Inguinal ligament
 - c. Psoas major
 - d. Deep fascia
- 5. The muscle that originates from the superior pubic rami is:
 - a. Sartorius
 - b. Illiacus
 - c. Pectineus
 - d. Psoas major

6. The structure that contains the femoral nerve, artery, and vein is called:

- a. Femoral triangle
- b. Obturator foramen
- c. Adductor Canal
- d. Iliac fossa

7. The muscles of Quadriceps Femoris are inserted into:

- a. Tuberosity of the tibia
- b. Lesser trochanter of the femur
- c. Below the lesser trochanter of the femur
- d. Linea apera

8. Medial thigh compartments are responsible for:

- a. Medial rotation of the femur
- b. Adduction of the hip joint
- c. Flexion of the knee
- d. Extension of the knee

9. Nerve supply of the medial compartment of the thigh:

- a. Obturator nerve
- b. Femoral nerve
- c. Thoracodorsal artery
- d. Sciatic nerve

10. Extensor of the knee:

- a. Sartorius
- b. Pectineus
- c. Iliacus
- d. Quadriceps femoris

11- which one of the following has double nerve supply:

A-Adductor magnus

- **B-** Pectineus
- **C- Gracilis**
- D-(A and B)

Question Number	Answer
1	b
2	d
3	a
4	b
5	С
6	a
7	a
8	В
9	A
10	d
11	d

NOTE:

- Pectineu: supply by Femoral nerve, sometimes obturator nerve
- Adductor magnus: supply by obturator nerve and sciatic nerve
