# Glucose Metabolism: Gluconeogenesis

By

**Amr S. Moustafa, MD, PhD**

Assistant Prof. & Consultant, Medical Biochemistry Unit,  
Pathology Dept., College of Medicine, KSU

[amrsm@ksu.edu.sa](mailto:amrsm@ksu.edu.sa)

# Objectives

- **The importance of gluconeogenesis as an important pathway for glucose production**
- **The main reactions of gluconeogenesis**
- **The rate-limiting enzymes of gluconeogenesis**
- **Gluconeogenesis is an energy-consuming, anabolic pathway**

# **Gluconeogenesis: An Overview**

- **Liver (mainly) and Kidneys**

- **Both mitochondria and Cytosol**

**Exception: Glycerol, only cytosol**

- **Gluconeogenic substrates:**

**Glycerol**

**Lactate and Pyruvate**

**Glucogenic amino acids**

# Gluconeogenic Pathway

4. Dephosphorylation of G6P

3. Dephosphorylation of F1,6P

2. Transport of OA

1. Carboxylation of pyruvate

# Gluconeogenic Substrates: Glycerol

**\*GK: Glycerol kinase only in liver & kidneys**

# Glucogenic Amino Acids

Aspartate (Asp)  
Asparagine (Asn)

Glutamate (Glu)  
Glutamine (Gln)

Phenylalanine (Phe)  
Tyrosine (Tyr)

Methionine (Met)  
Valine (Val)

# Gluconeogenic Substrates

Lactate

Pyruvate

Amino acids

Alanine (Ala)  
Glycine (Gly)

Aspartate (Asp)  
Asparagine (Asn)

Glutamate (Glu)  
Glutamine (Gln)

Phenylalanine (Phe)  
Tyrosine (Tyr)

Methionine (Met)  
Valine (Val)

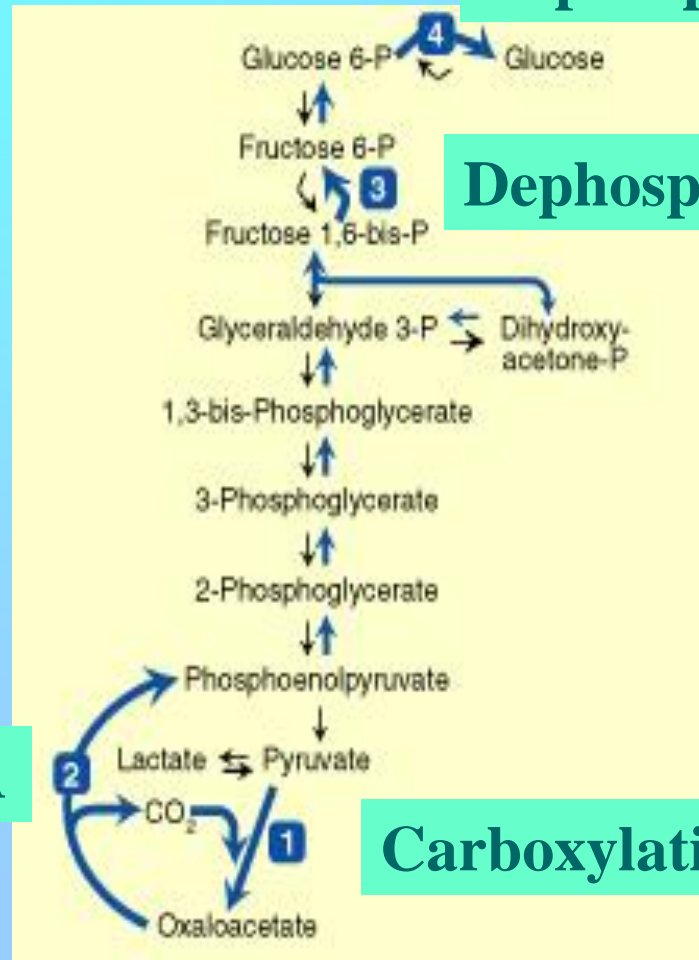

# Gluconeogenic Substrates: Lactate (Cori Cycle)

# Gluconeogenic Pathway

Dephosphorylation of G-6-P

Dephosphorylation of F 1,6-P

Transport of OAA

Carboxylation of pyruvate

# Carboxylation of Pyruvate in the Mitochondria

# Regulation of Pyruvate Carboxylase

Acetyl CoA diverts pyruvate away from oxidation and toward gluconeogenesis

# Pyruvate Carboxylase and PEP-CK

Fasting:  
Acetyl CoA  
(From FAO)\*

\*Fatty Acid  
Oxidation

Pyruvate carboxylase + PEP-CK ≠ Pyruvate kinase

# Fructose 1,6-Bisphosphatase

Fructose 1,6-bisphosphatase ~~≠~~ PFK-1

# Glucose 6-Phosphatase

Glucose 6-phosphatase  $\neq$  Glucokinase

# Gluconeogenesis: E- Consumed

Six High-Energy  
Phosphate Bonds  
Are Consumed for  
the Conversion of  
Pyruvate to Glucose

# Gluconeogenesis: Regulation

- Reciprocal control of  
**Gluconeogenesis & Glycolysis**
- Allosteric regulation:  
**Acetyl CoA**  $\oplus$  **Pyruvate carboxylase**

**AMP**  $\ominus$  or  $\oplus$  **ATP**  
**F 2,6-Bisphosphate**  $\ominus$  } **F 1,6-bisphosphatase**

- $\uparrow$  **Glucagon** ( $\downarrow$  **I/G ratio**)  
**Allosteric** ( $\downarrow$  **F 2,6-Bisphosphate**)  
**Induction** (**PEP-CK**)

# Take Home Message

- **Gluconeogenesis:**  
**Synthesis of glucose from noncarbohydrates**  
**Anabolic**  
**Energy-consuming**
- **Four unique enzymes are required for reversal of the 3 irreversible reactions of glycolysis**
- **Both gluconeogenesis & glycolysis are reciprocally-regulated**
