Autoimmune Diseases

Dr. Hend Alotaibi

Assistant professor & Consultant
College of Medicine, King Saud University
Dermatology Department /KKUH

Email: halotaibi1@ksu.edu.sa

- To know that the inflammatory processes in auto immune diseases are mediated by hypersensitivity reactions (type II, III and IV)
- To know that autoimmune diseases can be either organ specific or may be generalized involving many organs or tissues
- To understand that the manifestations of autoimmune diseases depend upon the organ and the degree of damage inflicted on the target tissues

Disease processes and tissue damage are due to Type II Type III and Type IV hypersensitivity reactions

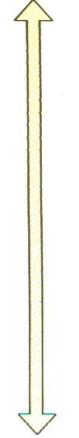

SOME AUTOIMMUNE DISEASES IN HUMANS

Disease	Self-antigen	Immune response
	Organ-specific autoimmune diseases	
Addison's disease	Adrenal cells	Auto-antibodies
Autoimmune hemolytic anemia	RBC membrane proteins	Auto-antibodies
Goodpasture's syndrome	Renal and lung basement membranes	Auto-antibodies
Graves' disease	Thyroid-stimulating hormone receptor	Auto-antibody (stimulating)
Hashimoto's thyroiditis	Thyroid proteins and cells	TDTH cells, auto-antibodies
Idiopathic thrombocyopenia purpura	Platelet membrane proteins	Auto-antibodies
Insulin-dependent diabetes mellitus	Pancreatic beta cells	T _{DTH} cells, auto-antibodies
Myasthenia gravis	Acetylcholine receptors	Auto-antibody (blocking)
Myocardial infarction	Heart	Auto-antibodies
Pernicious anemia	Gastric parietal cells; intrinsic factor	Auto-antibody
Poststreptococcal glomerulonephritis	Kidney	Antigen-antibody complexe
Spontaneous infertility	Sperm	Auto-antibodies
	Systemic autoimmune disease	
Ankylosing spondylitis	Vertebrae Immune complexes	
Multiple sclerosis	Brain or white matter T_{DTH} and T_{C} cells, auto-antibodies	
Rheumatoid arthritis	Connective tissue, IgG	Auto-antibodies, immune complexes
Scleroderma	Nuclei, heart, lungs, gastrointestinal tract, kidney	Auto-antibodies
Sjogren's syndrome	Salivary gland, liver, kidney, thryoid	Auto-antibodies
Systemic lupus erythematosus (SLE)	DNA, nuclear protein, RBC and platelet membranes	Auto-antobidies, immune complexes

spectrum of autoimmune disease

organ specific

non-organ specific

Hashimoto's thyroiditis Primary myxoedema Thyrotoxicosis Pernicious anaemia Autoimmune atrophic gastritis Addison's disease Premature menopause (few cases) Insulin-dependent diabetes mellitus Goodpasture's syndrome Myasthenia gravis Male infertility (few cases) Pemphigus vulgaris Pemphigoid Sympathetic ophthalmia Phacogenic uveitis Multiple sclerosis (?) Autoimmune haemolytic anaemia Idiopathic thrombocytopenic purpura Idiopathic leucopenia Primary biliary cirrhosis Active chronic hepatitis (HBs Ag negative) Cryptogenic cirrhosis (some cases) Ulcerative colitis Sjögren's syndrome Rheumatoid arthritis Dermatomyositis Scleroderma Mixed connective tissue disease Discoid lupus erythematosus Systemic lupus erythematosus (SLE)

Examples of Autoimmune Diseases Affecting Different Systems:

Nervous System:

Multiple sclerosis Myasthenia gravis

Autoimmune neuropathies such as:

- Guillain-Barré Syndrome (GBS)

Autoimmune uveitis

Blood:

Autoimmune hemolytic anemia

Pernicious anemia

Autoimmune thrombocytopenia

Blood Vessels:

Temporal arteritis

Anti-phospholipid syndrome Vasculitides such as

Wegener's granulomatosis

Behcet's disease

Skin:

Psoriasis

Dermatitis herpetiformis

Pemphigus vulgaris

Vitiligo

Gastrointestinal System:

Crohn's Disease Ulcerative colitis Primary biliary cirrhosis

Autoimmune hepatitis

Endocrine Glands:

Type 1 or immune-mediated diabetes mellitus

Grave's Disease Hashimoto's thyroiditis

Autoimmune oophoritis and orchitis

Autoimmune disease of the adrenal gland

Multiple Organs, Musculoskeletal System

Rheumatoid arthritis

Systemic lupus erythematosus Scleroderma

Polymyositis, dermatomyositis

Ankylosing spondylitis

Sjogren's syndrome

Organ Specific Autoimmune Diseases

Mediated by stimulating or blocking auto-antibodies

- 1) Graves' disease (Stimulating antibodies)
- 2) Myasthenia gravis (Blocking Antibodies)

1. Graves' Disease (Thyrotoxicosis)

- Production of thyroid hormones is regulated by thyroidstimulating hormones (TSH)
- •The binding of TSH to a receptor on thyroid cells stimulates the synthesis of two thyroid hormones: thyroxine and triiodothyronine

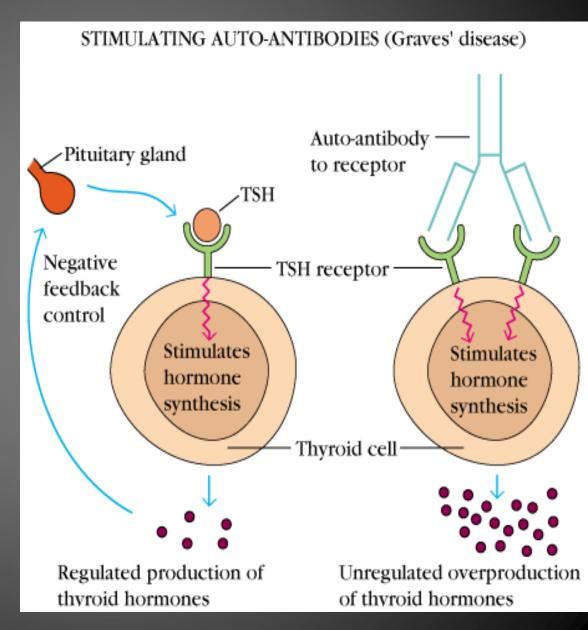

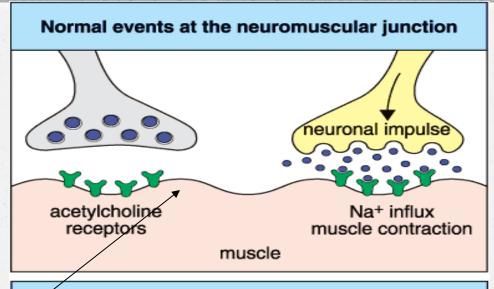

Fig. 1B

- •A person with Graves' Disease makes autoantibodies to the receptor for TSH.
- •Binding of these autoantibodies to the receptor mimics the normal action of TSH leading to overstimulation of the thyroid gland

- Clinically characterized by weakness and fatigability on sustained effort
- Antibodies directed against acetylcholine receptor (AChR)
- IgG Ab interact with the postsynaptic AChR at the nicotinic neuromuscular junction (NMJ)
- There is reduction in the number of functional AChR receptors by increasing complement mediated degradation of receptors

Myasthenia gravis

Motor endplates of muscles

Systemic Autoimmune Immune diseases

- I. Systemic lupus erythematosis (SLE)
- Systemic lupus erythematosis is the most common autoimmune disorder
- The characteristic "butterfly rash" is made worse by exposure to sunlight
- Lupus is a potentially fatal autoimmune disease

Figure 13.11 The Immune System, 3ed. (© Garland Science 2009)

Symptom complex

Constitutional

Fatigue:

Myalgia

Fever:

Weight change:

Arthritis:

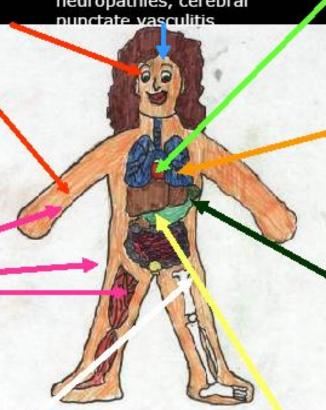

- migratory and asymmetrical. Only a few joints are usually affected, especially the hands
- •Joint deformities including ulnar deviation, MCP subluxation, and swan-neck deformities caused by tendon laxity, rather than bony destruction.

Dermatological:

- malar rash
- discoid lesions
- hair loss
- · oral ulcers
- · Raynaud's
- Nailfold erythema/crus
- livedo on hands/legs
- Bullous rash on legs
- dermatitis or fingers

CNS:

 cognitive defects, anxiety, depression, psychosis, seizures, and/or neuropathies, cerebral

Cardiovascular

- Pericarditis
- •Verrucous endocarditis => •emboli
- CAD from teroids

Pulmonary:

- Dyspnea and restrictive LFTs
- Pleurisy, pleural effusion, pneumonitis, interstitial lung disease, and pulmonary hypertension

Renal:

•glomerulon ephritis

GI:

Hematologic

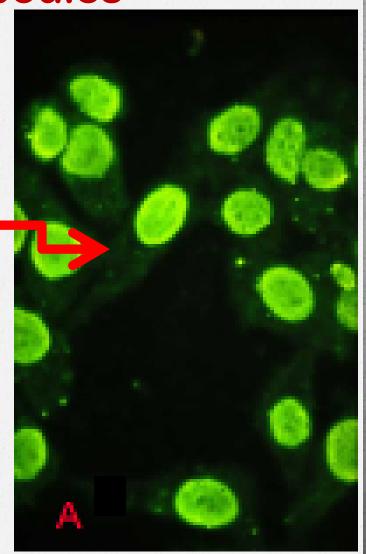

- Anemia of chronic disease
- Asymptomatic leukopenia
- Thrombocytopenia
- lymphadenopathy

- Gastritis/peptic ulcer due to NSAID/corticosteroids
- Pancreatitis, peritonitis, and colitis: due
 SLE vasculitis
- Lupoid hepatitis
- hepatosplenomegaly

Auto antibodies

 The anti-nuclear antibody (ANA) test is the best screening test for SLE and is determined by immunofluorescence or ELISA tests

 The ANA is positive in significant titer (usually 1:160 or higher) in virtually all patients with SLE

Significance of Autoantibodies in SLE

Antigen	SLE	Clinical Associations
ds DNA	70%	Nephritis (and flare)
Anti RNP	40%	Scleroderma, myositis
Histones	70%	Drug-Induced Lupus
SM Antigen	30%	Severe SLE
Anti ribosomal	20%	Psychosis, Depression
Antiphospholipid	50%	Clotting, fetal loss
SSA/Ro	35%	SCLE, Sjogren's, NLS
SSB/La	15%	SCLE, Sjogren's, NLS
Anti neuronal	60%	Active CNS lupus

Other investigations

- Anti-double-stranded DNA titers
- Complement Levels (CH50, C3, C4)
- ESR
- CRP
- Complement Split products
- Decreased complement C1q

Treatment

NSAIDs (Non-steroidal anti-inflammatory drugs)

Antimalarials (Hydroxychloroquine)

Immunosuppressive agents

2. Rheumatoid Arthritis

- Is an autoimmune disease in which the normal immune response is directed against an individual's own tissue, including the:
 - Joints
 - Tendons
 - Bones

Resulting in inflammation and destruction of these tissues

Rheumatoid Arthritis (Contd.)

- The cause of rheumatoid arthritis is not known
 - Investigating possibilities of a foreign antigen, such as a virus

 Both prevalence and incidence are 2-3 times greater in women than in men

Pathogenesis

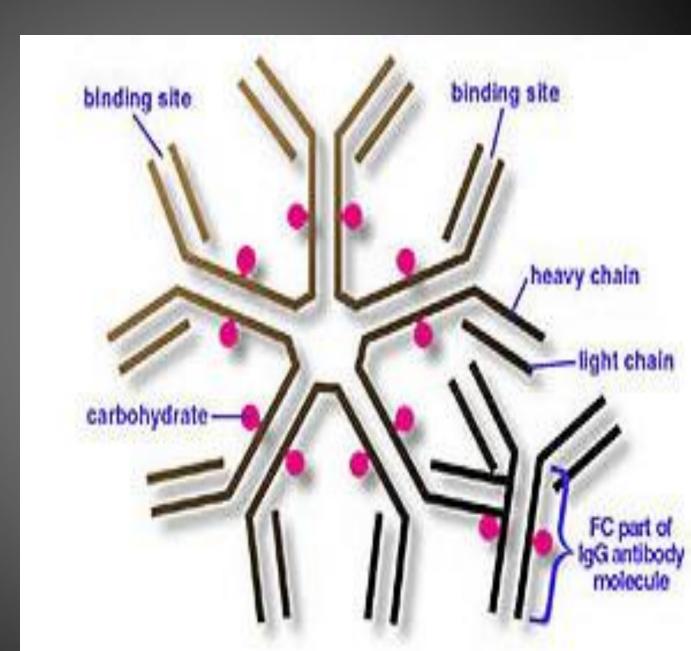

(Type III hypersensitivity reaction)

In rheumatoid arthritis, many individuals produce a group of auto-antibodies known as rheumatoid factor

These antibodies react with determinants in the $F_{\rm C}$ region of IgG

Rheumatoid Factor

The classic rheumatoid factor is an IgM antibody with this kind of reactivity

Pathogenesis

(Type III hypersensitivity reaction)

Such auto-antibodies bind to normal circulating IgG, forming IgM-IgG complexes which may be deposited in joints.

This leads to activation of synovial macrophages

The macrophages engulf the immune complexes and then release TNF and other pro-inflammatory cytokines e.g., IL-1

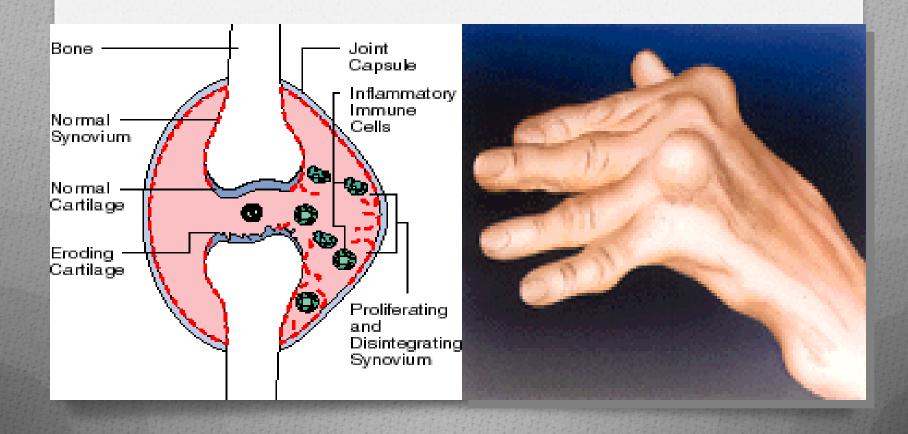

TNF induces the secretion of metalloproteinases; which are known to cause joint destruction.

T cell activation due to unknown antigens also contributes to the inflammation in RA

Rheumatoid Arthritis

Rheumatoid arthritis (RA) affects peripheral joints and may cause destruction of both cartilage and bone.

Treatment and Prognosis

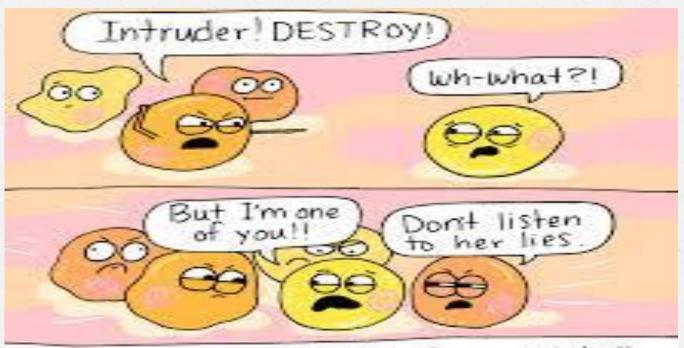

Medications

- NSAIDS (Non-steroidal anti-inflammatory drugs)
- Disease-modifying drugs (eg, gold, hydroxychloroquine, sulfasalazine, penicillamine)
- Immunosuppressive therapy:
 - Corticosteroids
 - Methotrexate
- Surgery
- Physical therapy

- The spectrum of autoimmune disorders is wide ranging from single organ involvement to a systemic disease
- The disease process is usually prolonged and is generally associated with significant morbidity and mortality
- The mainstay of the treatment is to maintain immunosuppression

Thank you

Autoimmune disorders in a nutshell.
