# BONES OF THE UPPER and LOWER LIMBS

# **OBJECTIVES**

# At the end of the lecture the students should be able to:

Classify the bones of the three regions of the upper and lower limb.

#### Memorize the main features of the

- Bones of the arm (humerus), of the thigh (femur & patella)
- Bones of the forearm (radius & ulna), of the leg (tibia & Fibula).
- Bones of the hand (carpal, metacarpal, phalanges), of the foot (tarsals, metatarsals and phalanges)

Recognize the side and position of each bone

# The Bones of UL are:

Pectoral Girdle.

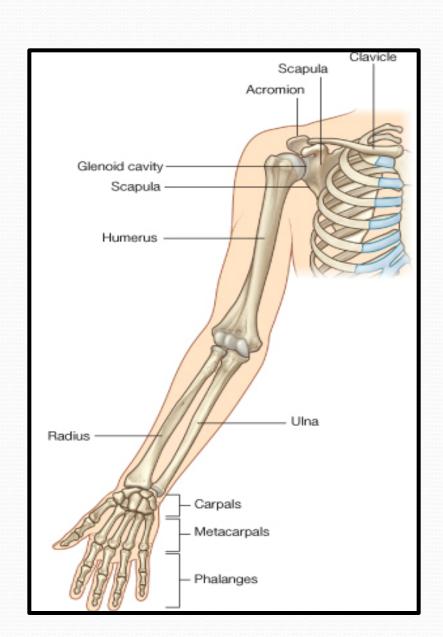

Arm: Humerus.

Forearm: Radius & Ulna.

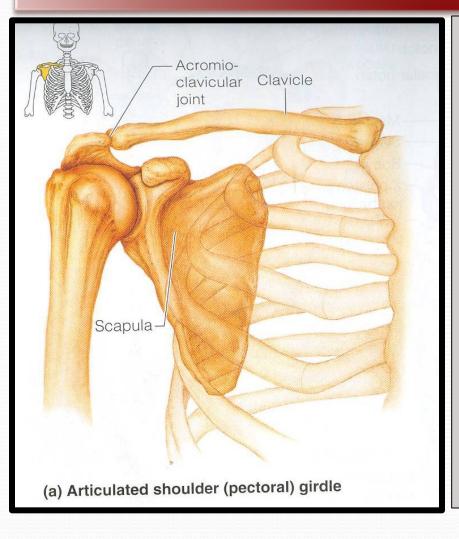

Wrist: Carpal bones

Hand: Metacarpals &

**Phalanges** 

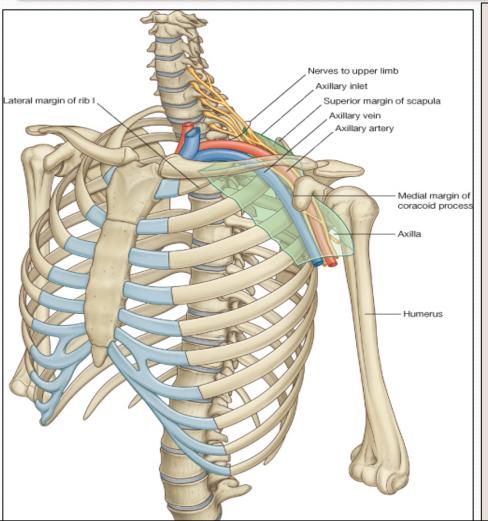

# Pectoral Girdle

- Formed of Two Bones:
- Clavicle (anteriorly) and Scapula (posteriorly).
- It is very light and allows the upper limb to have exceptionally free movement.

# Clavicle

- It is a doubly curved <u>long bone</u> lying horizontally across the root of the neck
- It is subcutaneous throughout its length.

#### It has Two Ends:

Medial (Sternal): enlarged & triangular.

Lateral (Acromial): flattened.

#### **Body (shaft):**

Its medial 2/3 is convex forward.

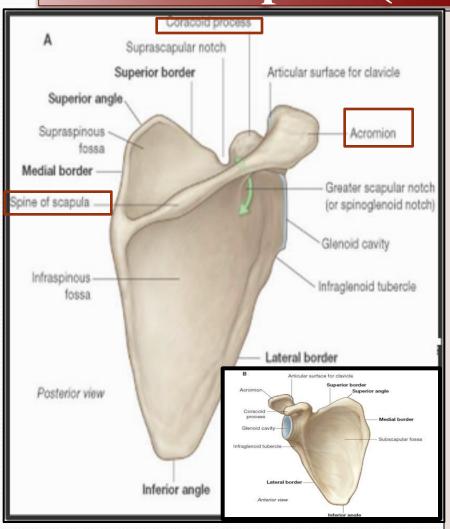

Its lateral 1/3 is concave forward.

**Surfaces:** Superior: smooth as it

lies just deep to the skin.

**Inferior**: rough because strong ligaments bind it to the 1<sup>st</sup> rib.

# Scapula (Shoulder Blade)

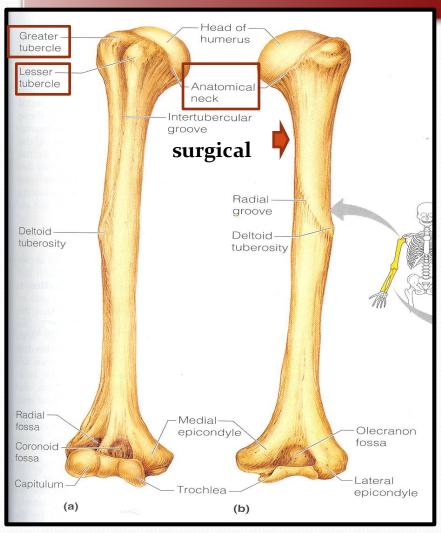

- It is a triangular Flat bone.
- Extends between the 2<sup>nd</sup> 7<sup>th</sup> ribs.
- It has:
- Three Processes:
- (1)Spine, (2) Acromion, (3) Coracoid
- Three Borders: Superior, Medial (Vertebral) & Lateral (Axillary)
- Three Angles: Superior, Lateral (forms the Glenoid cavity), Inferior.

#### **Two Surfaces:**

- Convex Posterior, Smaller Supraspinous Fossa (above the spine) and the larger Infraspinous Fossa (below the spine).
- Concave Anterior (Costal)

# Humerus

**Typical Long bone.** 

**Proximal End:** Head, Neck, Greater & Lesser Tubercles.

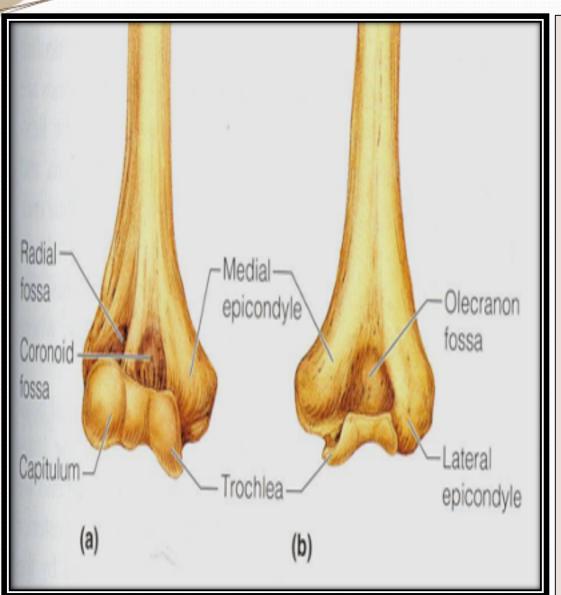

Intertubercular Groove.

Anatomical neck: formed by a groove separating the head from the tubercles. Surgical Neck: a narrow part distal to the tubercles.

**Shaft (Body):** Has two prominent features:

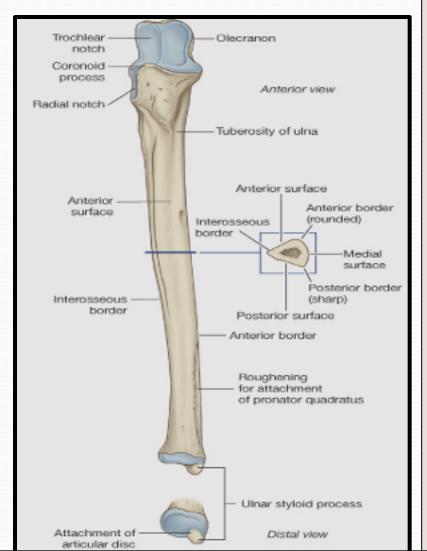

- 1. Deltoid tuberosity:
- 2. Spiral (Radial) groove:

**Distal End:** Medial (can be felt) and Lateral Epicondyles.

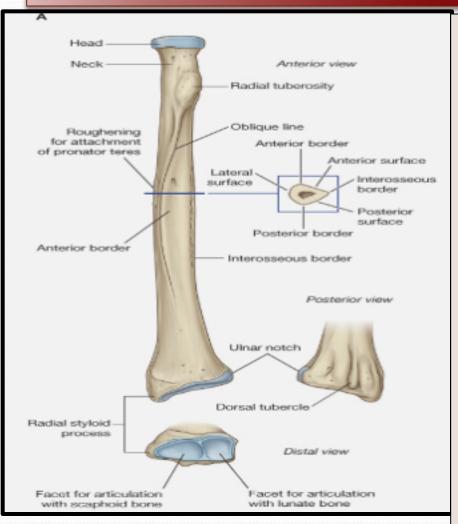

- Structures at Distal end:
- Anteriorly:
- Trochlea: (medial) for articulation with the ulna
- Capitulum: (lateral) for articulation with the radius.
- Coronoid fossa: above the trochlea.
- Radial fossa: above the capitulum.
- Posteriorly:
- Olecranon fossa: above the trochlea.

# Ulna

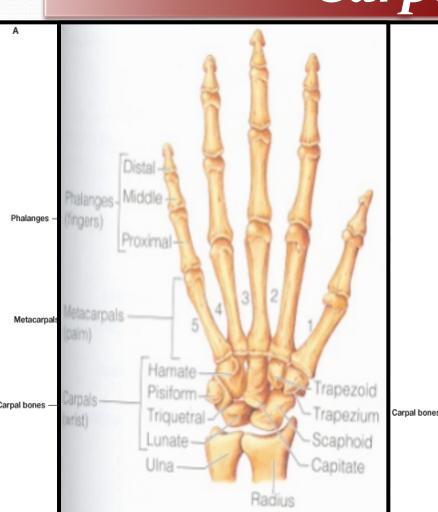

- It is the stabilizing bone of the forearm.
- It is the medial & longer of the two bones of the forearm.
- Proximal End
- 1. Olecranon Process:
- 2. Coronoid Process:
- 3.Tuberosity of Ulna:
- 4.Trochlear Notch:
- 5.Radial Notch:
- Shaft:
- Thick & cylindrical superiorly but diminishes in diameter inferiorly
- It has Three Surfaces (Anterior, Medial & Posterior).
- Sharp Lateral Interosseous border.
- **Distal End:** Small rounded
- 1. Head: lies distally at the wrist. .
  - 2. Styloid process: Medial.

# Radius

- It is the shorter and lateral of the two forearm bones.
- Proximal End:
- 1. Head: small & circular
- Its upper surface is concave for articulation with the Capitulum.
- 2. Neck.
- 3. Radial (Biciptal) Tuberosity: medially directed and separates the proximal end from the body.
- Shaft:
- Has a lateral convexity.
- It gradually enlarges as it passes distally.
- Distal (Lower) End: It is rectangular
- 1. Ulnar Notch: a medial concavity to accommodate the head of the ulna.
- 2.Radial Styloid process: extends from the lateral aspect.
- 3.Dorsal tubercle: projects dorsally.

# Carpal Bones

- Composed of <u>Eight short</u> bones
   <u>Proximal row</u> (from lateral to medial):
- Scaphoid, Lunate, Triquetral & Pisiform bones.
- <u>Distal row</u> (from lateral to medial):
- Trapezium, Trapezoid,
- Capitate & Hamate.
- Five Metacarpal bones, each has a Base, Shaft, and a Head.
- Each digit has **Three Phalanges**
- Except the Thumb which has only Two

# The Bones of LL are:

**Pelvic Girdle: Hip bone** 

&Sacrum

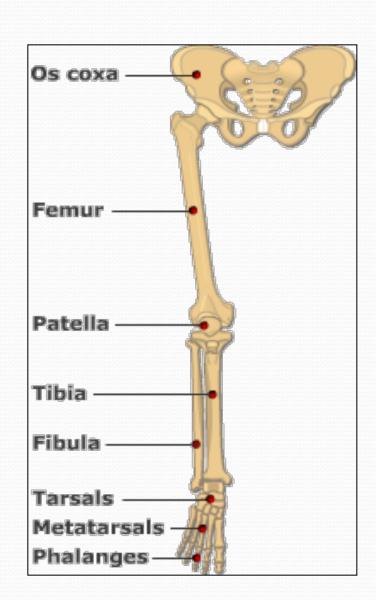

Thigh: Femur& Patella.

Leg: Tibia & Radius.

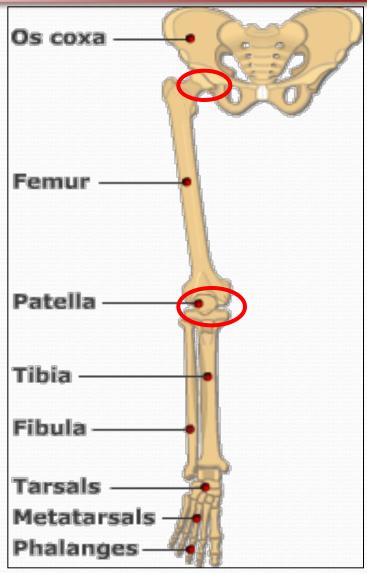

**Ankle: Tarsal bones** 

Foot: Metatarsal &

Phalanges.

# BONES OF THIGH (Femur and Patella)

#### Femur:

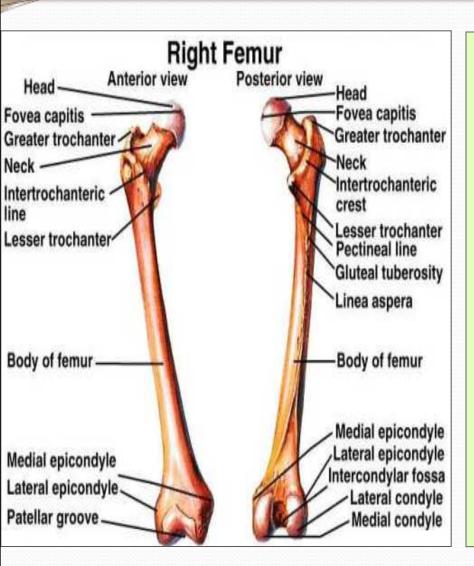

- Articulates above with acetabulum of hip bone to form the hip joint.
- Articulates below with tibia and patella to form the knee joint.

# • Femur:

#### **Consists of:**

- Upper end
- Shaft
- Lower end

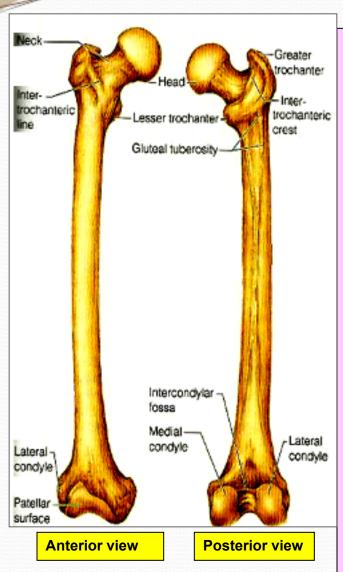

# UPPER END OF FEMUR

#### Head:

- It articulates with acetabulum of hip bone to form hip joint.
- Neck :
- It connects head to the shaft.
   Greater & lesser trochanters:
- Anteriorly, connecting the 2 trochanters, the intertrochanteric line, where the iliofemoral ligament is attached.
- Posteriorly, the intertrochanteric crest, on which is the quadrate tubercle (Qudratus femoris muscle).

# SHAFT OF FEMUR

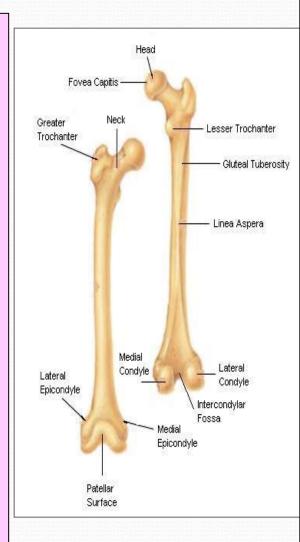

#### It has 3 surfaces

Anterior Medial Lateral

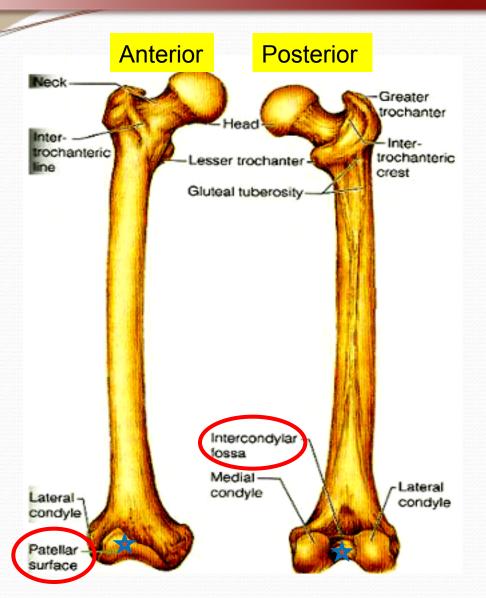

#### It has 3 borders

Two rounded medial and lateral

One thick posterior border or ridge called linea aspera

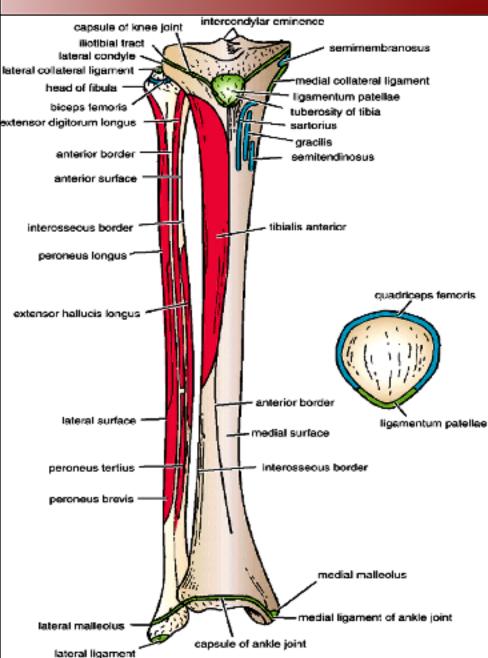

# LOWER END OF FEMUR

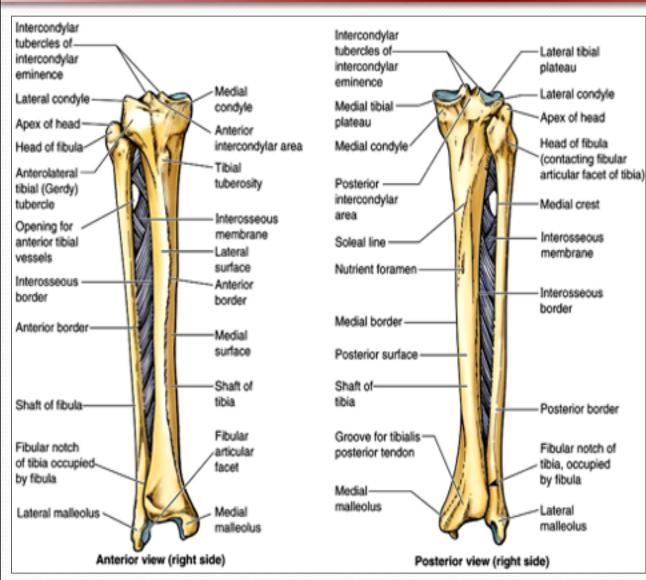

- Has lateral and medial condyles, separated anteriorly by articular patellar surface, and posteriorly by intercondylar notch or fossa.
- The 2 condyles take part in the knee joint.
- Above the condyles are the medial & lateral epicondyles.

# PATELLA

- It is a largest sesamoid bone (lying inside the Quadriceps tendon in front of knee joint).
- Its anterior surface is rough and subcutaneous.
- Its posterior surface articulates with the condyles of the femur to form knee joint.
- Its apex lies inferiorly and is connected to tuberosity of tibia by ligamentum patellae.
- Its upper, lateral, and medial margins give attachment to Quadriceps femoris muscles.

# BONES OF LEG (TIBIA AND FIBULA)

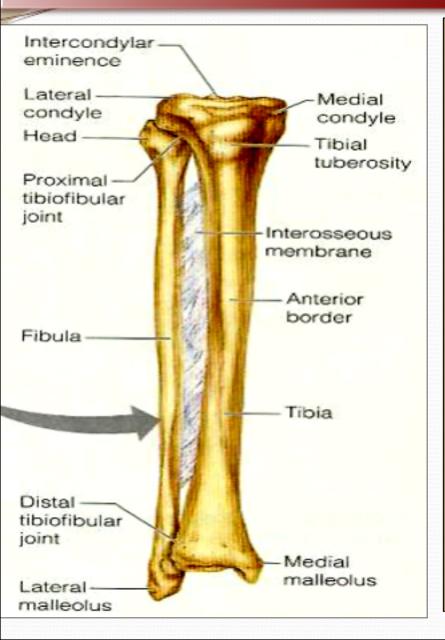

### Tibia:

It is the medial bone of leg.

#### Fibula:

- It is the lateral bone of leg.
- Each of them has upper end, shaft, and lower end.

# TIBIA

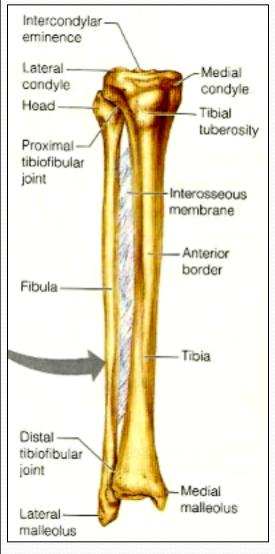

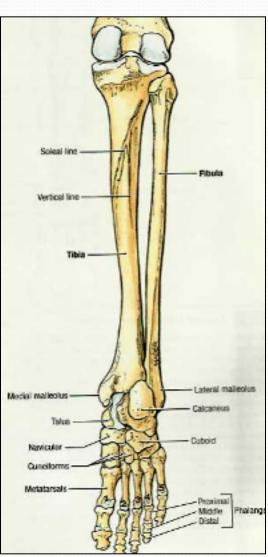

# **Upper end has:**

- 2 tibial condyles:
- Medial condyle: is larger and articulate with medial condyle of femur. It has a groove on its posterior surface for semimembranosus muscles.
- Lateral condyle: is smaller and articulates with lateral condyle of femur.

  It has facet on its lateral side for articulation with head of fibula to form proximal tibio-fibular joint.
- Intercondylar area:
  is rough and has intercondylar
  eminence.

# TIBIA

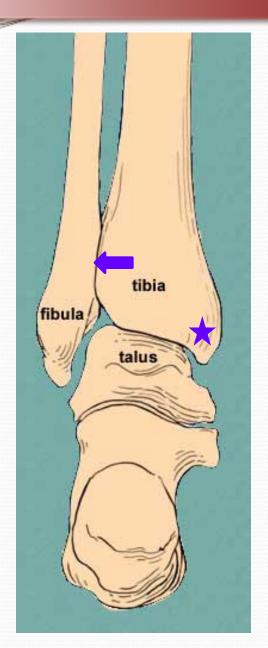

## **Shaft has:**

- Tibial tuberosity:
  - Its upper smooth part gives attachment to <u>ligamentum</u> patellae.
  - Its lower rough part is subcutaneous.
- 3 borders:
- Anterior boder: sharp and subcutaneous.
- Medial border.
- Lateral border interosseous border.
- 3 surfaces:
- Medial: subcutaneous.
- Lateral
- Posterior has oblique line, soleal line for attachment of soleus muscle

# TIBIA

#### Lowe end:

- Articulates with talus for formation of ankle joint.
- Medial malleolus:

- Its <u>medial surface</u> is subcutaneous.
- Its <u>lateral surface</u> articulate with talus.
- Fibular notch: lies on its lateral surface of lower end to form distal tibiofibular joint.

# **HBULA**

# **Fibula**

# Upper end:

- fibular head
- neck of fibula

# Shaft:

interosseous border

## Lower end:

lateral malleolus

- It is the selender lateral bone of the leg.
- It takes no part in articulation of knee joint.

#### Its upper end has:

**Head**: articulates with lateral condyle of tibia.

Styloid process.

Neck.

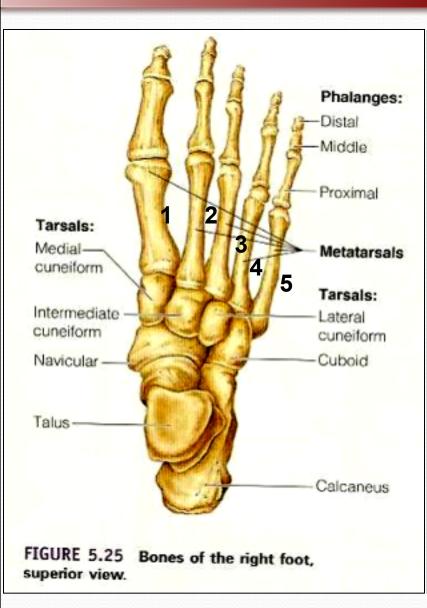

#### Shaft has:

- 4 borders: its medial 'interosseous border gives attachment to interosseous membrane.
- 4 surfaces.

#### Lower end forms:

Lateral malleolus: is subcutaneous, Its medial surface is smooth for articulation with talus to form ankle joint.

# BONES OF FOOT

#### 7 Tarsal bones:

- 1. Calcaneum.
- 2. Talus.
- 3. Navicular.
- 4. Cuboid.
- 5. 3 cuneiform bones.

Only Talus articulates with tibia & fibula at ankle joint.

Calcaneum: the largest bone of foot, forming the heel.

#### 5 Metatarsal bones:

- They are numbered from medial (big toe) to lateral.
- 1st metatarsal bone is large and lies medially.
- Each metatarsal bone has a base (proximal). a shaft and a head (distal).

#### 14 phalanges:

- 2 phalanges for big toe (proximal & distal)
- 3 phalanges for each of the lateral 4 toes (proximal, middle & distal)

# THANK YOU
