The three important things are:

- 1-Identify the section
- 2-Lining epithelium
- 3-Identifying features

Esophagus

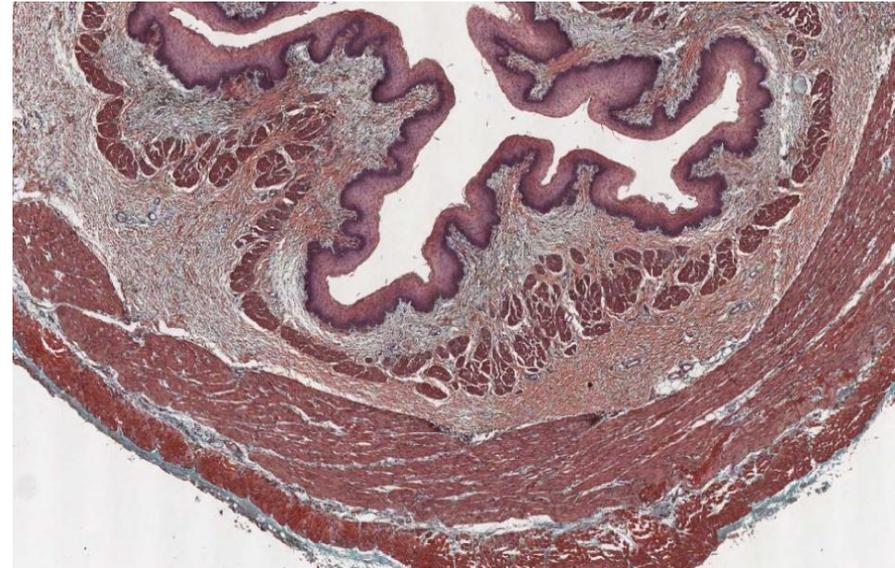

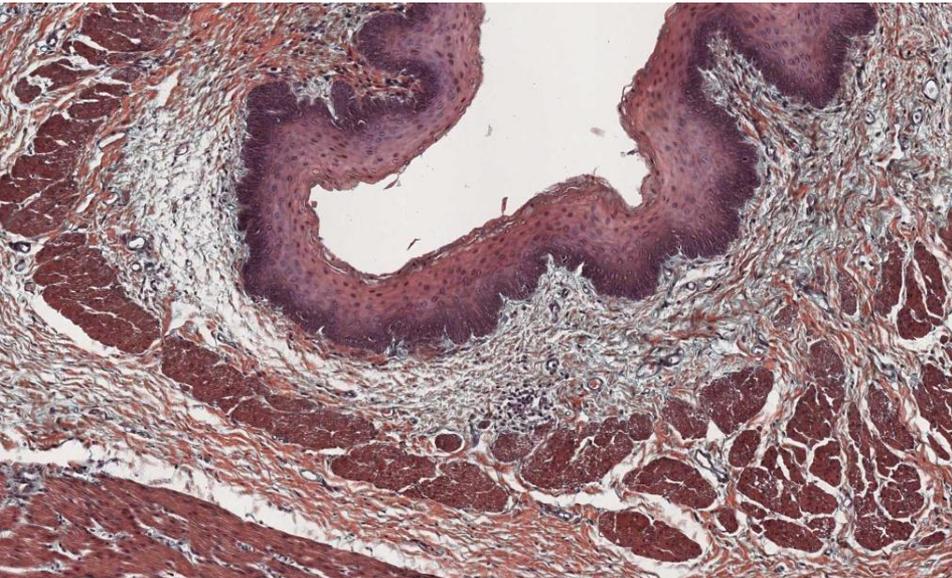

Lining epithelium: Non-Keratinized Stratified Squamous Epithelium

Identifying features:

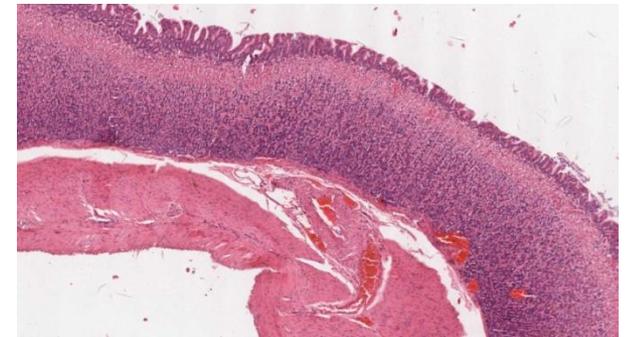

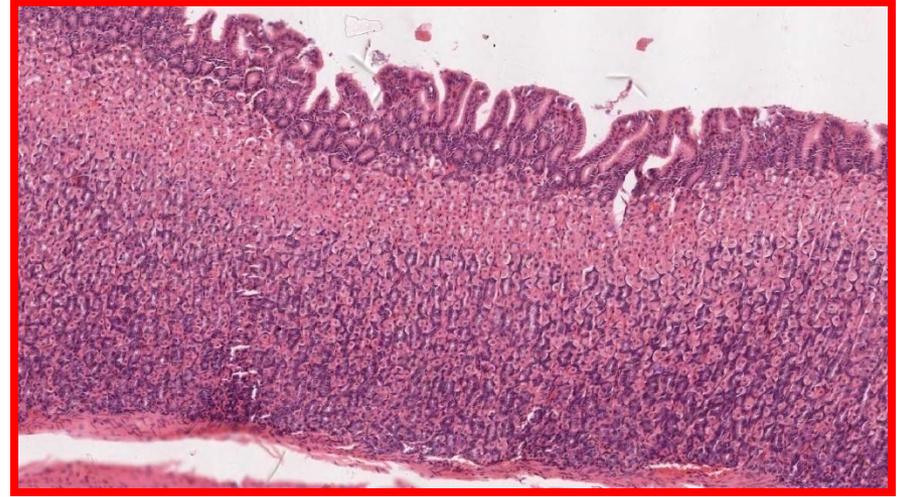

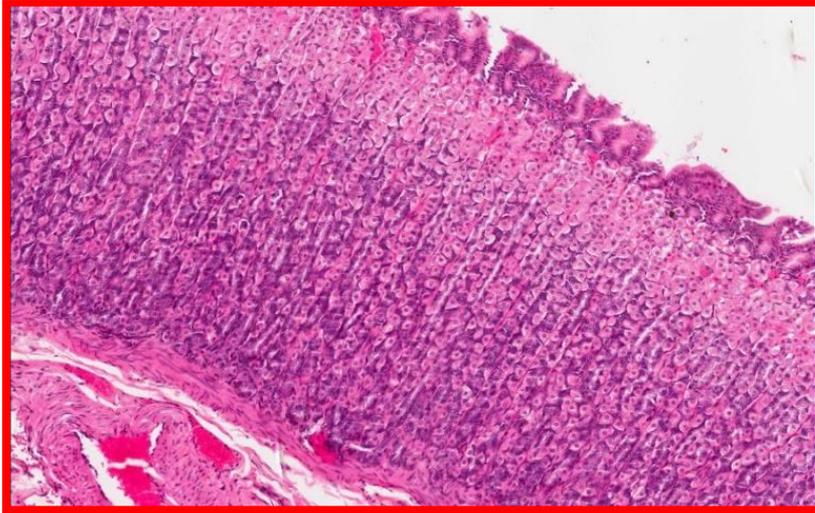

1-Muscularis mucosa

2-Non keratinized stratified squamous epithelium

3-Muscularis externa(inner circular – outer longitudinal)

Fundus of stomach

Lining epithelium: simple columnar epithelium.

Identifying features:

1-simple columnar epithelium.

2-The fundic pit ratio 1:4 of mucosa thickness

3-Muscularis mucosa.

Pylorus of the stomach

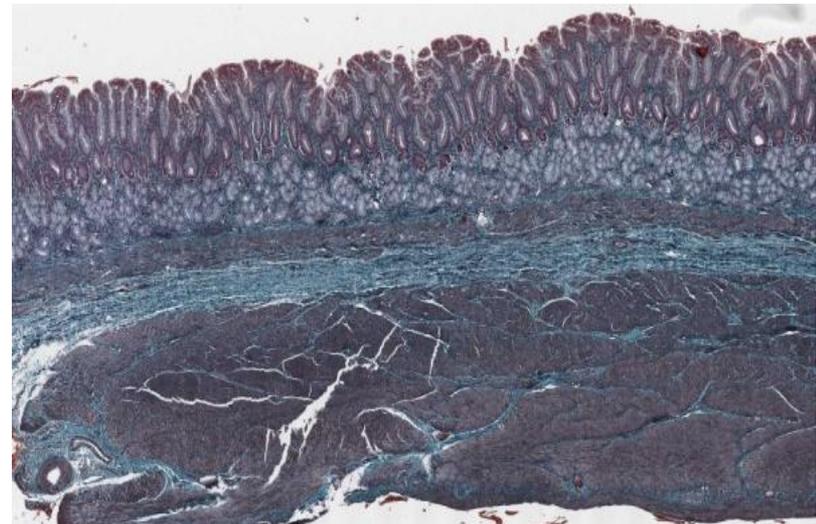

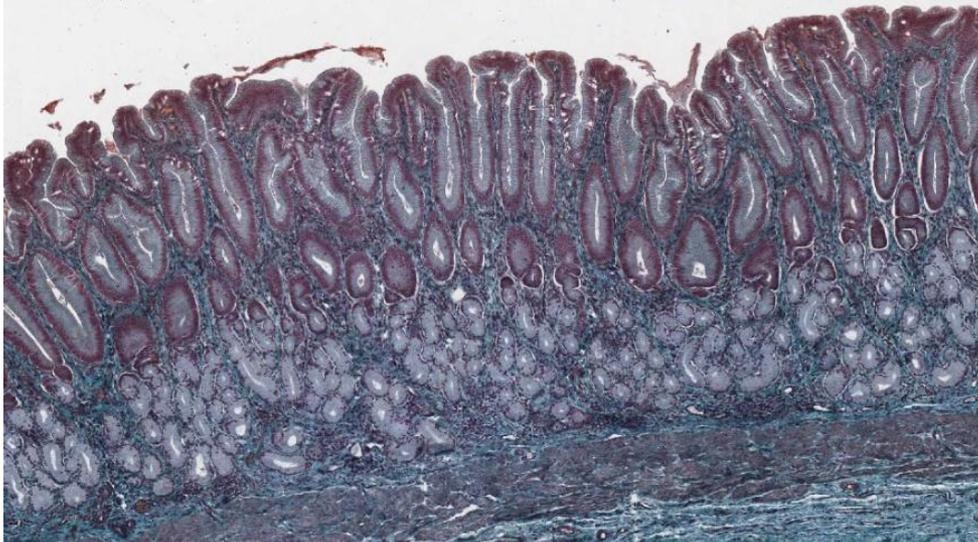

Lining epithelium: simple columnar epithelium.

Identifying features:

1-Simple columnar epithelium

2-The proportion of the pit and the body of the gland is 1:1

3-Muscularis mucosa

Duodenum

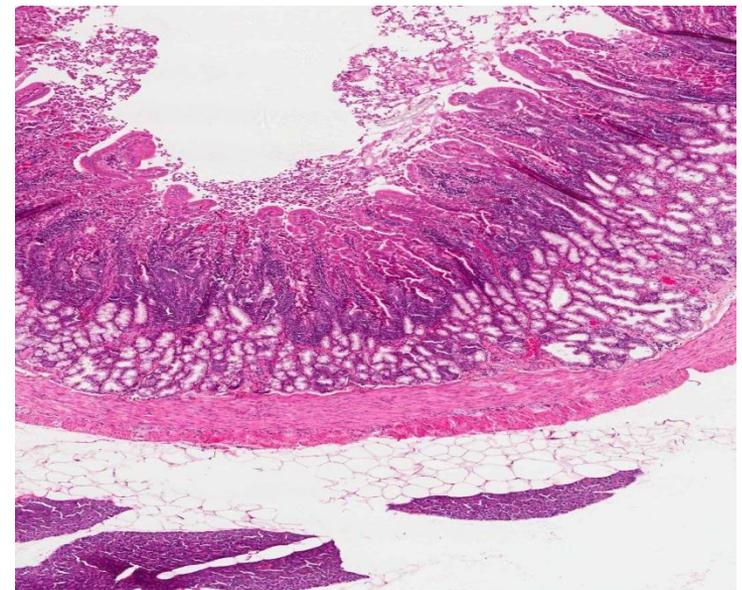

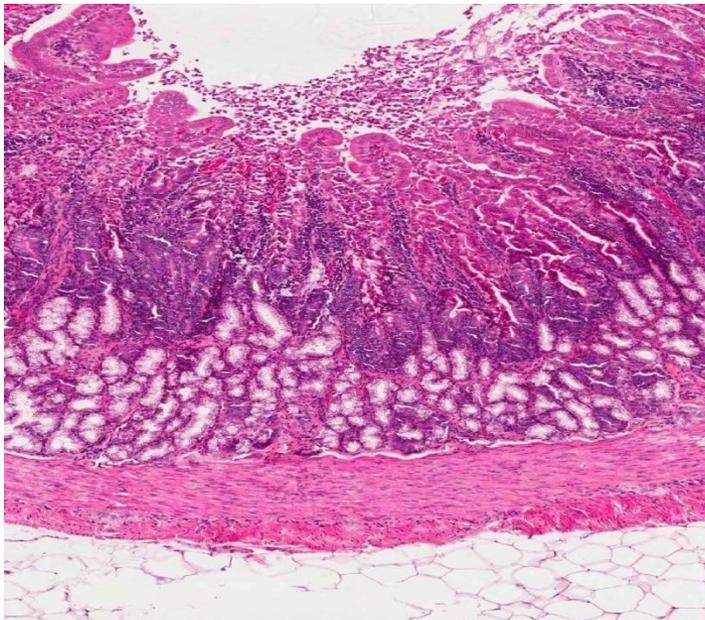

Lining epithelium: simple columnar epithelium with goblet cells

Identifying features:

1-Intestinal villi

2-Brunners gland (in the submucosa)

3-Intestinal crypts.

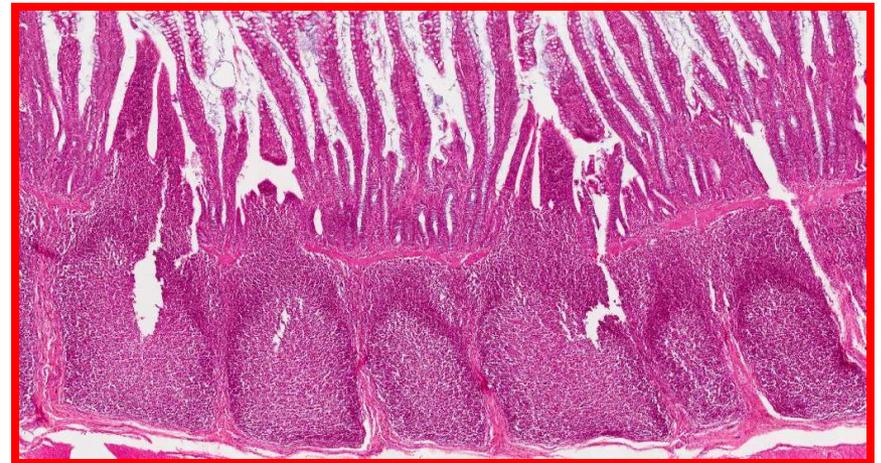

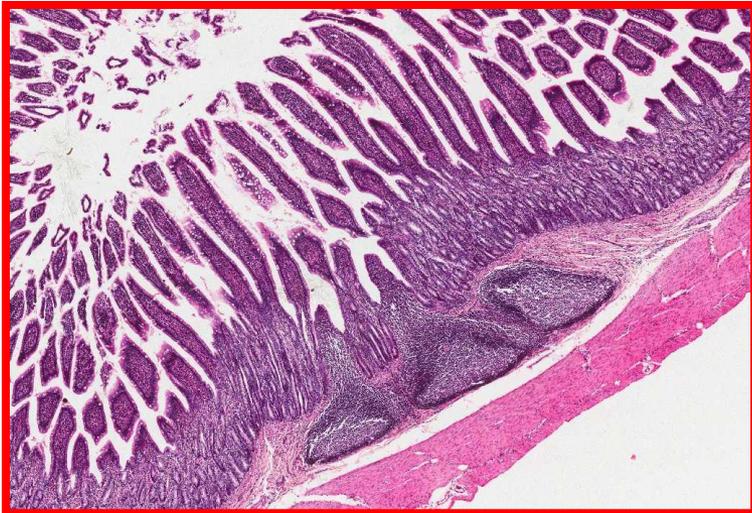

Ileum (be aware from the spelling)

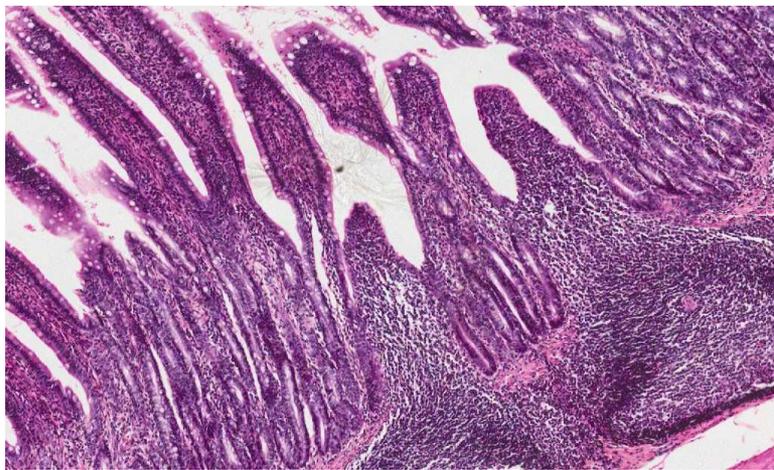

Lining epithelium: Simple columnar epithelium with goblet cells

Identifying features:

- 1-Intestinal villi.
- 2-Payers patches.
- 3-Intestinal crypts

More pictures for the ileum (The Two pictures in the previous slide are the most important)

Colon

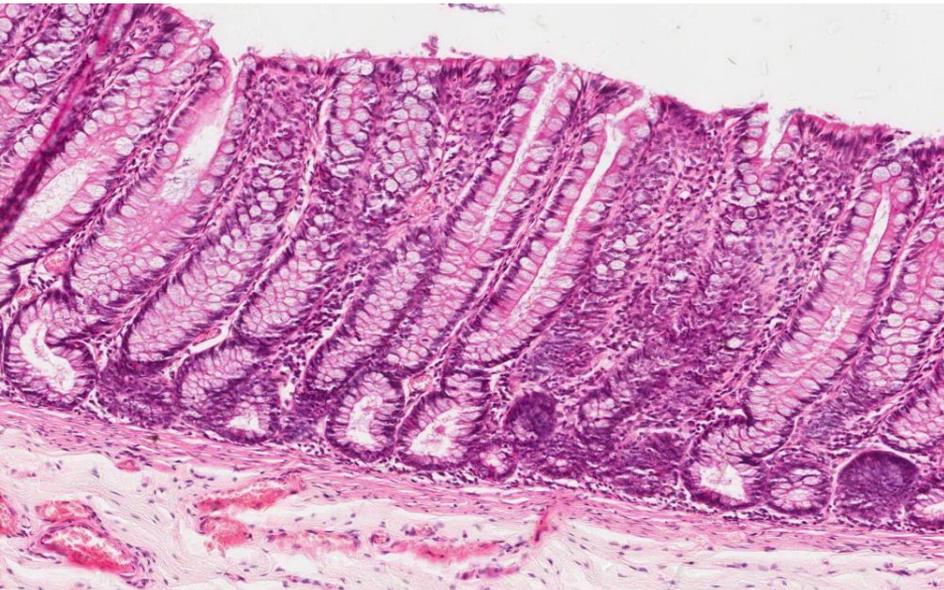

Lining epithelium: Simple columnar epithelium with goblet cells.

Identifying features:

1-Numerous goblet cells.

2-**No** intestinal villi.

3-Muscularis mucosa.

Appendix

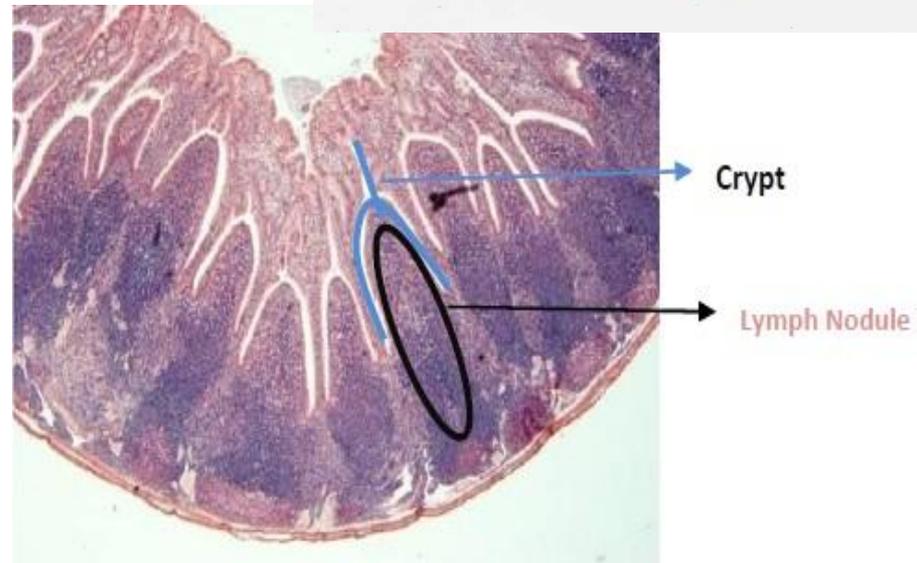

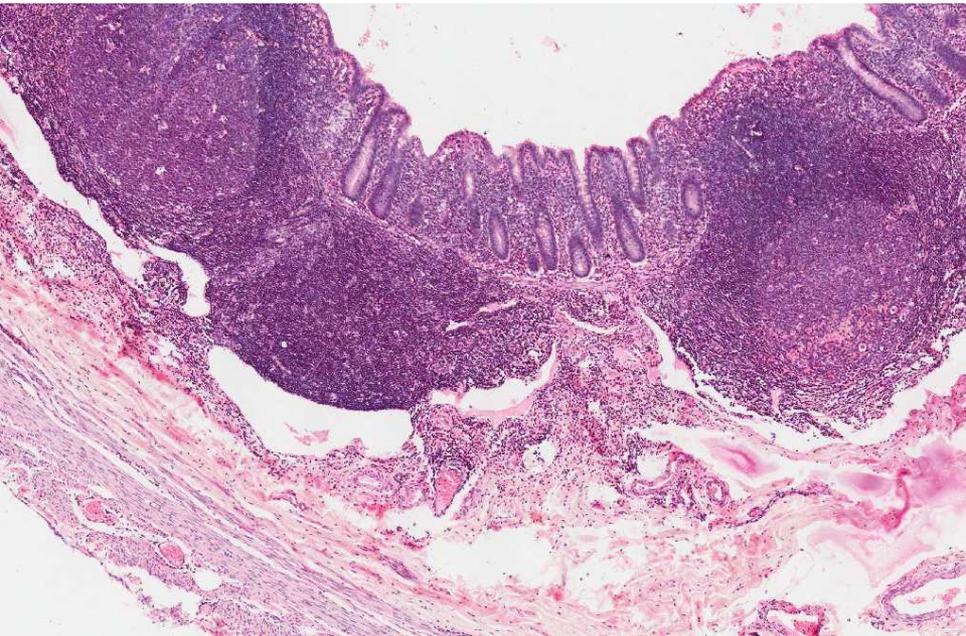

Lining epithelium: Simple columnar epithelium with goblet cells.

Identifying features:

1-No intestinal villi.

2-Lymph nodules(in the lamina propria) (1:3 of gland height)

3-Simple columnar epithelium with goblet cells.

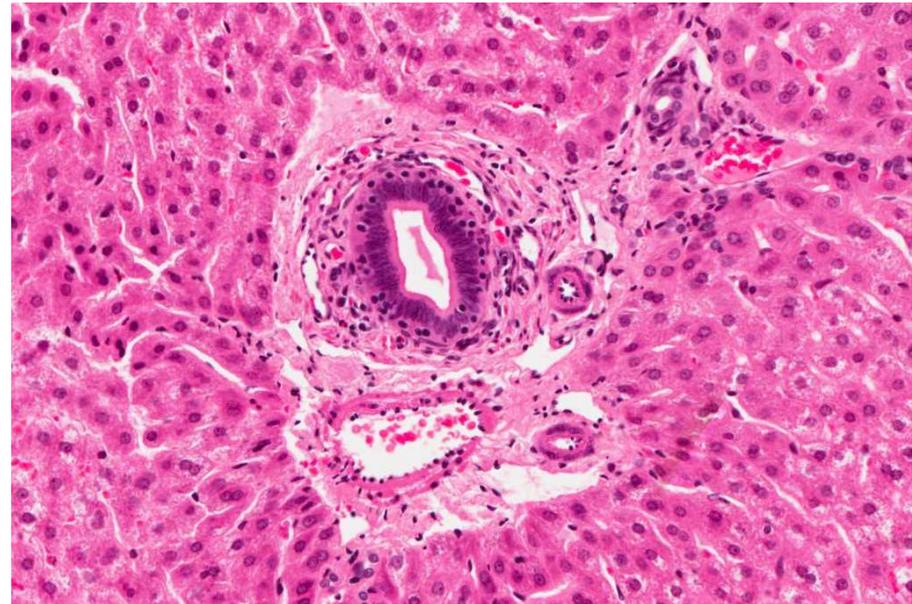

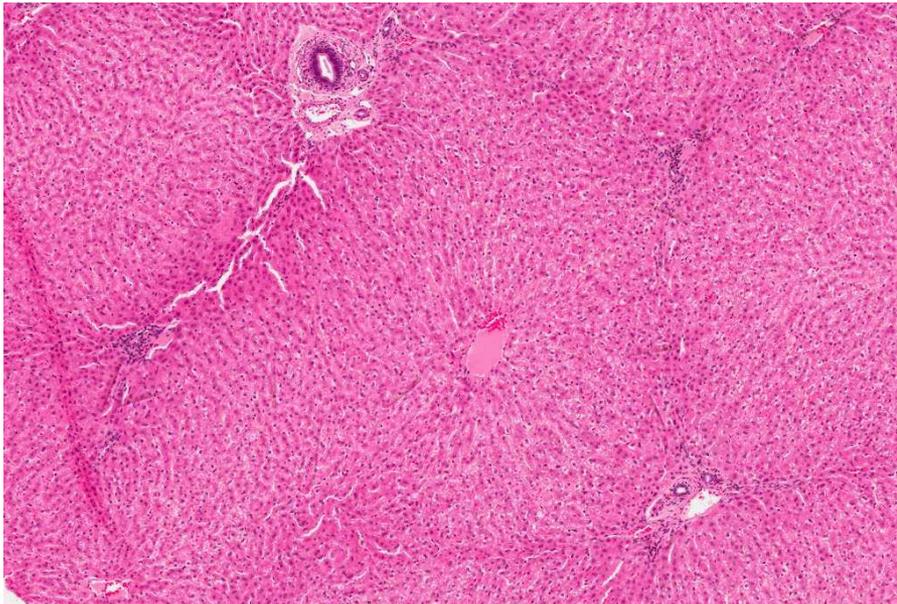

Liver

Portal area:

1-Bile duct.

2-Branch of portal vein.

3-Branch of hepatic artery.

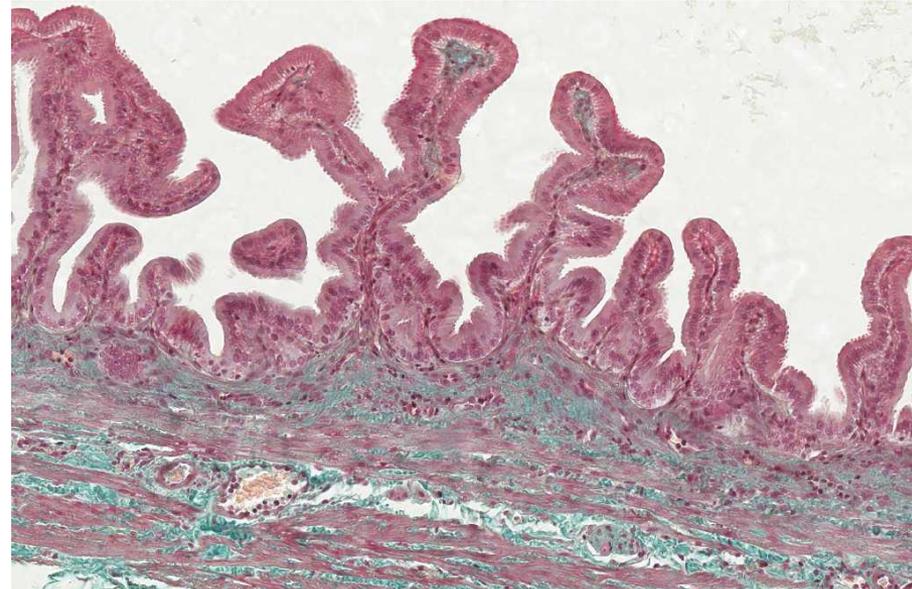

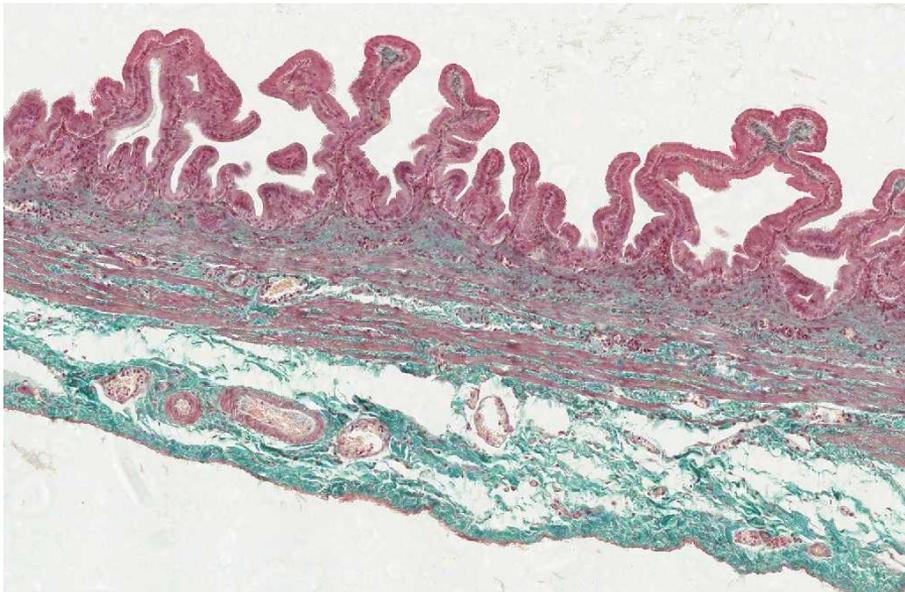

Gall Bladder

Lining epithelium: Simple columnar epithelium.

Identifying features:

1-Mucosal folds.

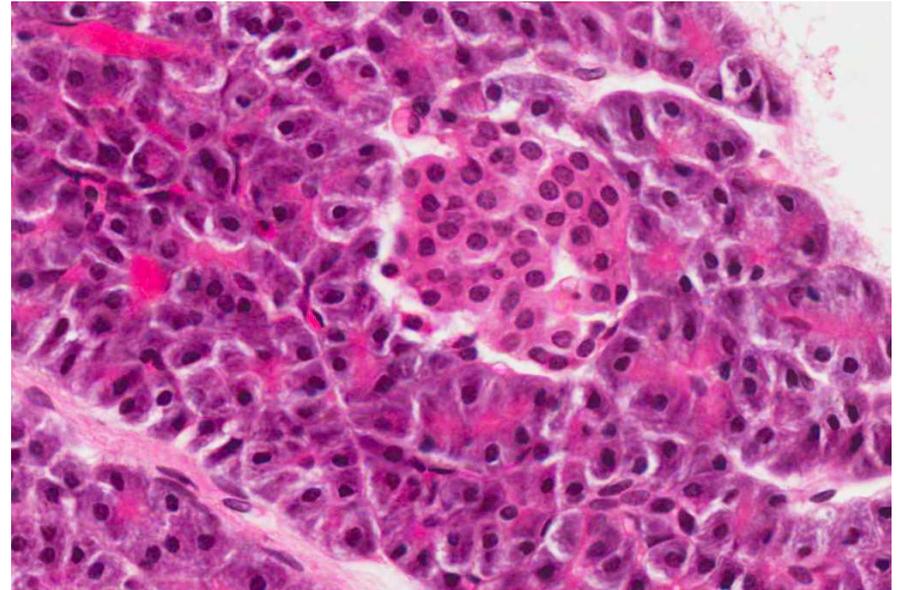

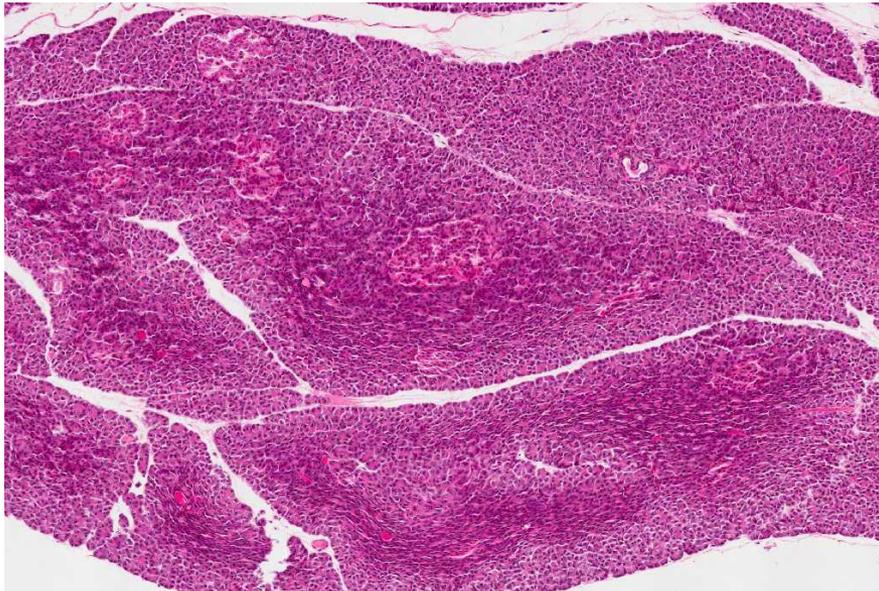

2-Serosa.

Pancreas (Not very important)

Identifying features:

- 1-Islets of langerhans.
- 2-Lobules of pancreatic acini.

Spleen

1-White pulp:
Lymphatic nodule.
Central artery

2-Red pulp.
