

## 4 Female Perineum and External Genitalia

# MIND MAP

[perineal membrane & deep perineal pouch](#)

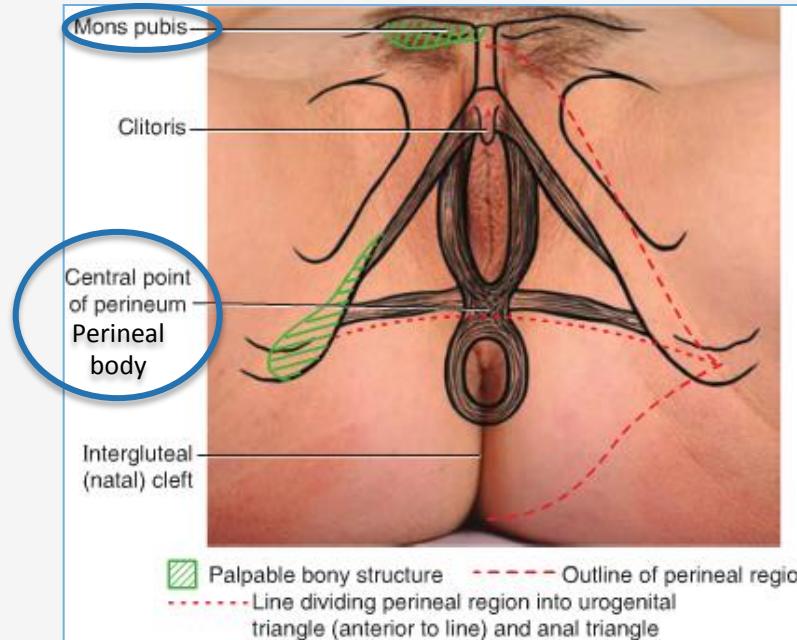

# Perineum

## Perineum

Is the **region of the body below the pelvic diaphragm (The outlet of the pelvis)**.  
 It is a **diamond shaped area between the thighs**.

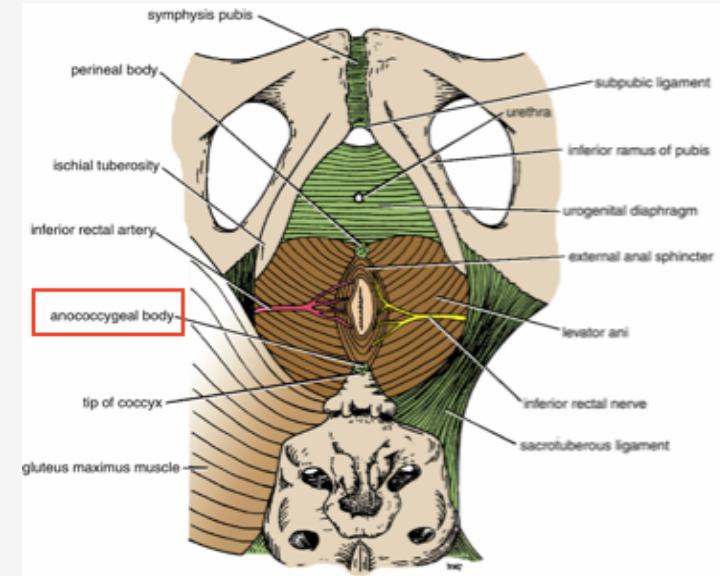

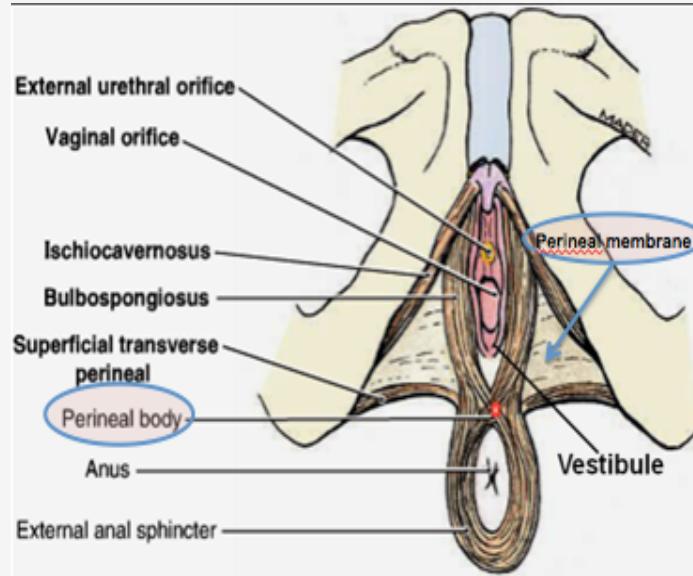

Boundaries	Contents
Anteriorly <b>Mons pubis</b> Laterally <b>Medial surfaces of the thighs</b> Posteriorly <b>Intergluteal folds</b>	Lower ends of <b>urethra, vagina &amp; anal canal</b> <b>External genitalia</b> <b>Perineal body &amp; Anococcygeal body</b>

# Perineal & Anococcygeal body

	Perineal body	Anococcygeal body
Description	irregular fibromuscular mass	complex musculotendinous structure
Location	in the <b>subcutaneous tissue</b> , posterior to <b>vaginal vestibule</b> and anterior to the <b>anal canal &amp; anus</b> (midpoint of the line <b>between the ischial tuberosities and blends interiorly with the perineal membrane</b> ) Forms the <b>central point of the perineum</b>	between the <b>anterior aspect of the coccyx</b> and the <b>posterior wall of the anorectal canal</b>
Function	<ul style="list-style-type: none"> <li>✓ Gives attachment to <b>perineal muscles</b>.</li> <li>✓ Plays an important role in <b>visceral support</b> especially in female.</li> </ul>	<ul style="list-style-type: none"> <li>✓ <u>Receives insertion of fibers of <b>levator ani muscle</b></u>.</li> </ul>

# Perineum

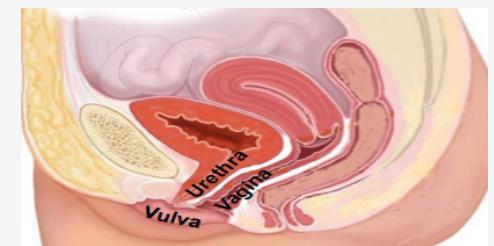

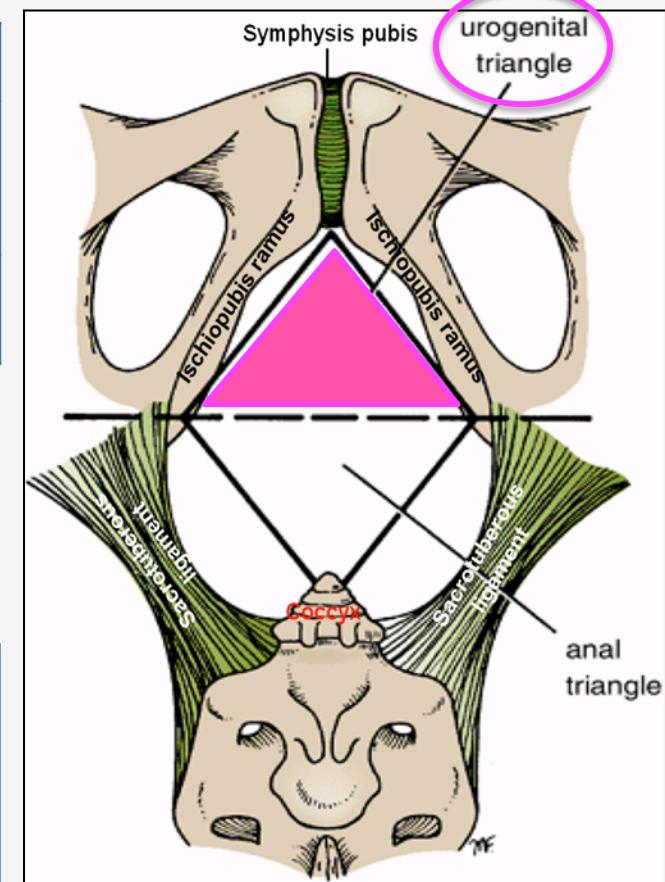

bony boundaries	Division
Anterior: Symphysis pubis. Posterior: Coccyx. Lateral: Ischiopubic rami, ischial tuberosities & sacrotuberous ligaments.	By an imaginary line passing through two <b>ischial tuberosities</b> , it is divided into:  <b>Urogenital triangle</b> anteriorly <b>Anal triangle</b> posteriorly

## Urogenital Triangle

Boundaries	Contents
<b>Anteriorly</b> : Symphysis pubis <b>Posteriorly</b> : Transverse line passing through the 2 ischial tuberosities. <b>Laterally</b> : Ischiopubic rami & ischial tuberosities.	Lower part of <b>urethra</b> & <b>vagina</b> . External genitalia ( <b>vulva</b> ).

# Urogenital Diaphragm

## Urogenital Diaphragm

### Description

A triangular **musculofascial diaphragm**

### Location

- In the **anterior part of the perineum**
- Fills in the gap between the **pubic arch**.

### Compositions

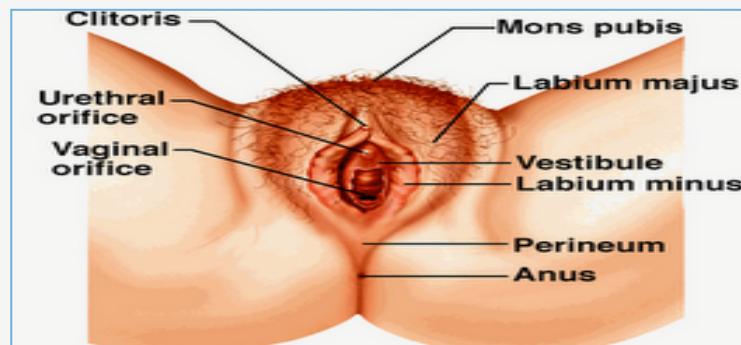

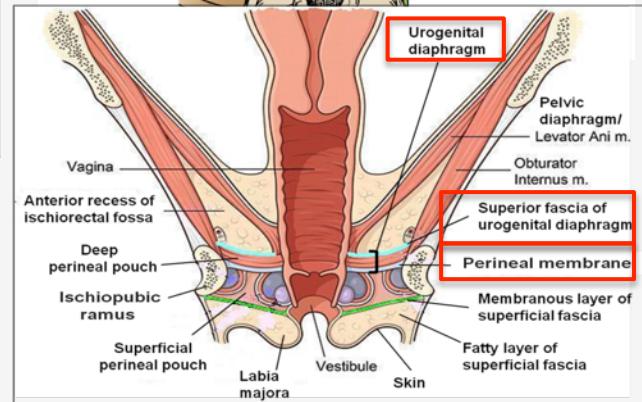

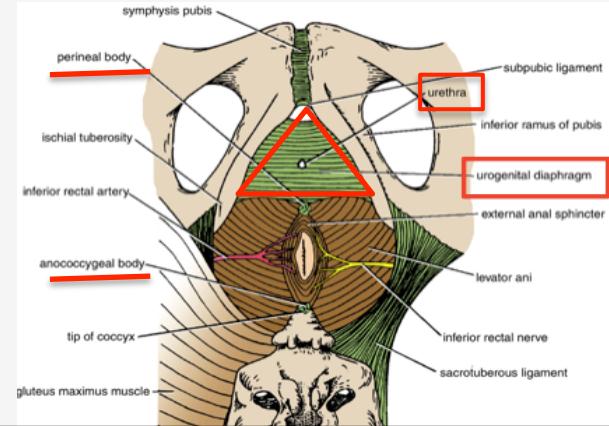

- Sphincter urethrae.**
- deep transverse perineal muscles:** enclosed within the **superior and inferior layers of fascia of the urogenital diaphragm**
- The **inferior layer of the fascia is formed by the perineal membrane**

\*Pelvic diaphragm: levator ani ms. +coccygus ms.

## Female External Genitalia (Vulva)

- Mons pubis :** a collection of fat overlying the pubes.
- Labia majora.**
- Labia minora.**
- Clitoris.**
- Vestibule of vagina:** The interval between the two **labia minora**.  
Vagina & urethra open into the vestibule through **urethral orifice** anteriorly and **vaginal orifice** posteriorly

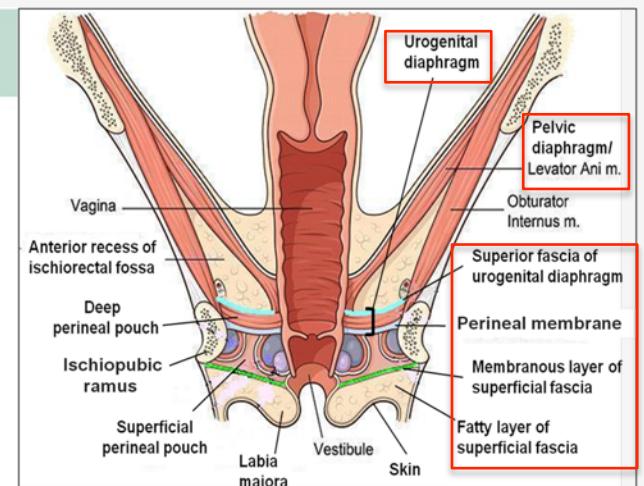

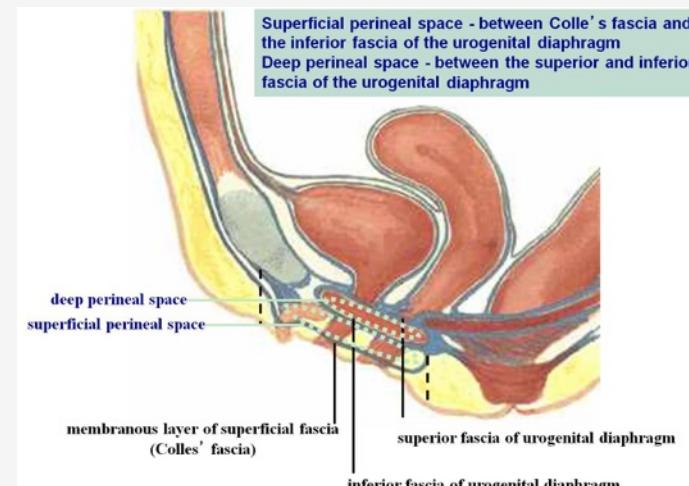

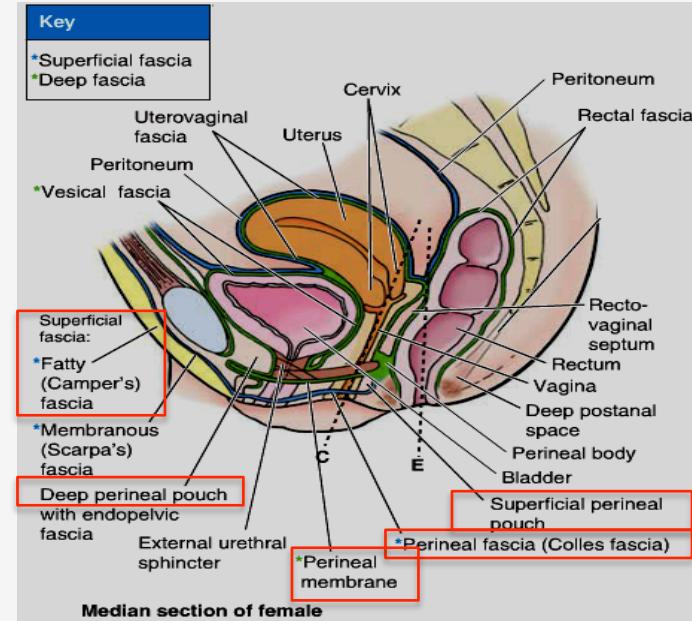

# Fascia of Urogenital Triangle (Perineal Fascia)

## Fascia of Urogenital Triangle (Perineal Fascia)

The **perineal fascia** is continuous **anteriorly** with the **fascia of abdomen** and consists of **superficial** and **deep** layers.

Superficial perineal fascia	Deep perineal fascia
<b>Superficial fatty layer (Camper's fascia)</b>	<b>Deep membranous layer (Colle's fascia )</b>
makes up the substance of <b>mons pubis &amp; labia majora</b> and <b>extends into the anal region</b>	<b>Does not extend to anal region.</b> Becomes fused with the posterior margin of the <b>perineal membrane</b>

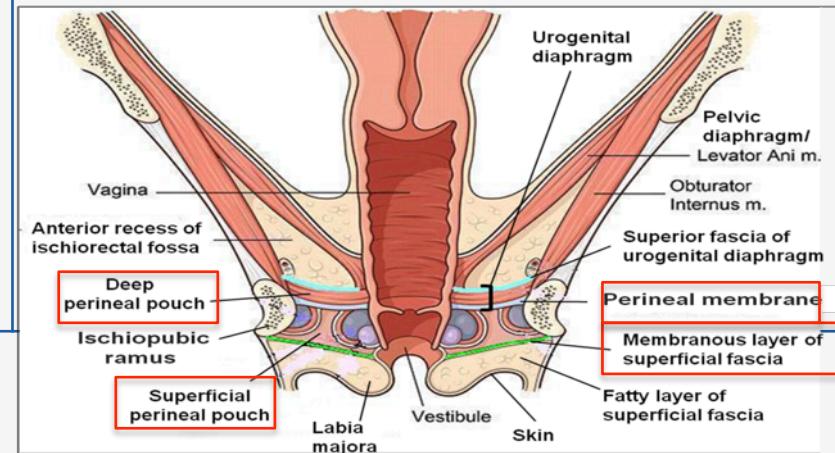

Structurally, the urogenital triangle is complex, with a number of fascial layers and pouches. Unlike the anal triangle, the urogenital triangle has an additional layer of strong deep fascia, known as the **perineal membrane**. This membrane has **pouches** on its superior and inferior surfaces.

# Superficial & Deep Perineal Pouch

	Superficial perineal pouch	Deep perineal pouch
Description	space between the <b>deep membranous layer</b> of superficial fascia and the <b>perineal membrane</b> .	It is a completely closed space <b>deep to the perineal membrane</b>
Boundaries	<ul style="list-style-type: none"> <li><b>Inferiorly:</b> membranous layer of superficial fascia.</li> <li><b>Superiorly:</b> perineal membrane.</li> <li><b>Laterally:</b> ischiopubic rami</li> </ul>	<ul style="list-style-type: none"> <li><b>Inferiorly:</b> Inferior fascia of the urogenital diaphragm (Perineal membrane)</li> <li><b>Superiorly:</b> Superior fascia of the urogenital diaphragm</li> <li><b>Laterally:</b> Inferior portion of obturator internus fascia.</li> </ul>
Contents	<ul style="list-style-type: none"> <li><b>Bulbs of vestibule:</b> on each side of vaginal orifice.</li> <li><b>Crura of clitoris.</b></li> <li><b>Superficial perineal muscles:</b></li> <li><b>Bulbospongiosus muscle</b>, surrounds orifice of vagina and covers vestibular bulb.</li> <li><b>Ischiocavernosus muscle</b>, covers crus of clitoris on each side.</li> <li><b>Superficial transverse perineal muscles.</b></li> <li><b>Greater vestibular glands:</b> on each side of vaginal orifice.</li> <li><b>Perineal branch of pudendal nerve</b> supplying muscles &amp; skin.</li> </ul>	<ul style="list-style-type: none"> <li><b>Part of urethra</b></li> <li><b>Part of vagina</b></li> <li><b>Sphincter urethrae muscle</b>, which is pierced by urethra &amp; vagina.</li> <li><b>Deep transverse perineal muscles</b></li> <li><b>Internal pudendal vessels</b></li> <li><b>Dorsal nerve of clitoris</b></li> </ul>

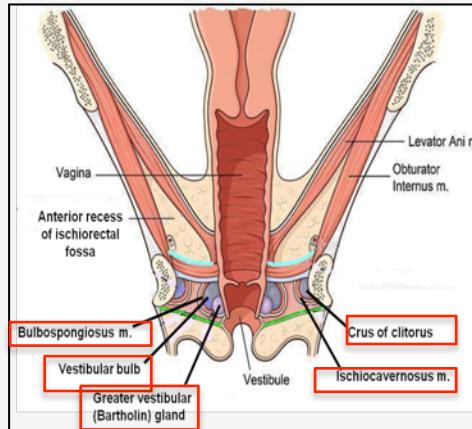

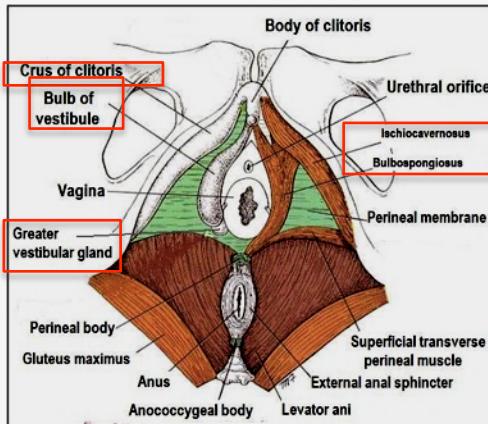

Skin → Superficial fatty layer → deep membranous fascial layer → Perineal membrane (inferior layer of urogenital fascia) → Urogenital diaphragm (Muscle) → superior layer of urogenital fascia.

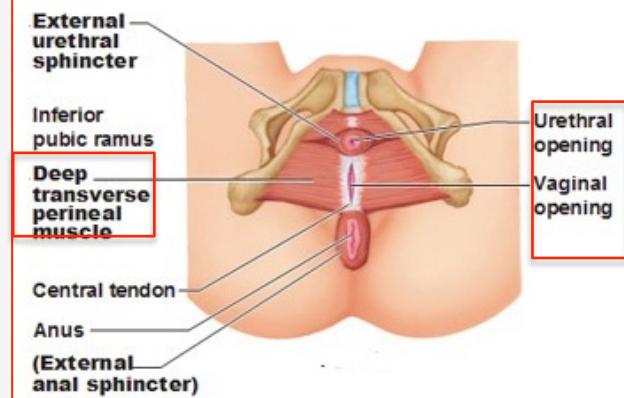

# Vagina

## Superficial perineal pouch

## Deep perineal pouch

## vagina

The vagina is a muscular canal that leads from the uterus to the external orifice of the genital canal

It measures about 3 in. (8 cm) long.

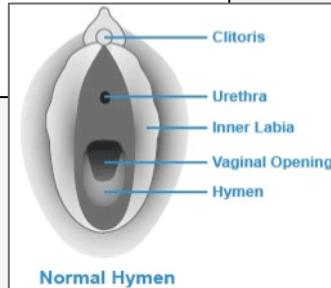

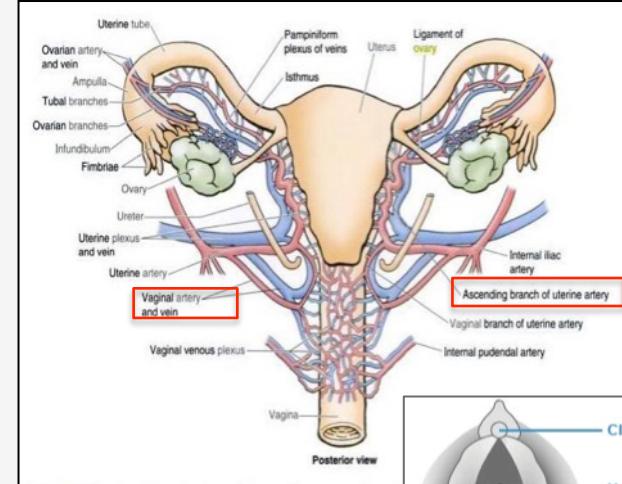

It serves as the **excretory duct** for the **menstrual flow** & forms part of the **birth canal**.

The **vaginal orifice** in a **virgin\*** possesses a **thin mucosal fold**, called the **hymen**, which is perforated at its center.

### Arteries:

- Vaginal artery**, a branch of the **internal iliac artery**
- Vaginal branch** of the **uterine artery**

**Veins:** drain into the **internal iliac veins**.

\*a person who has never had sexual intercourse.

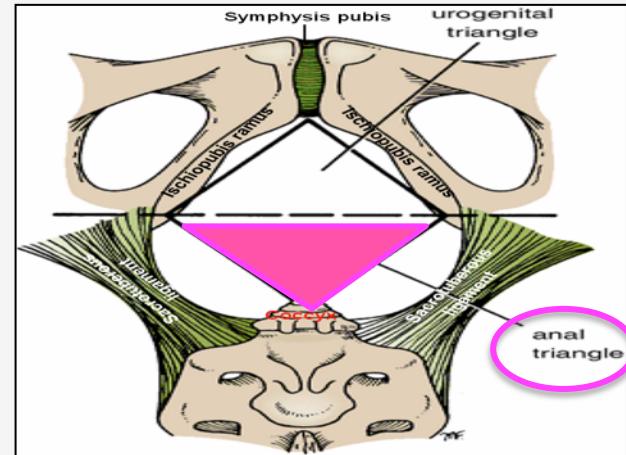

# Anal Triangle

Boundaries	Contents
<ul style="list-style-type: none"> <li><b>Anteriorly:</b> Transverse line passing through the 2 ischial tuberosities.</li> <li><b>Posteriorly :</b> coccyx.</li> <li><b>Laterally :</b> ischial tuberosity &amp; sacrotuberous lig.</li> </ul>	<ul style="list-style-type: none"> <li><b>Lower part of Anal canal.</b></li> <li><b>Ano-coccygeal body.</b></li> <li><b>Ischiorectal fossa</b> on each side.</li> </ul>

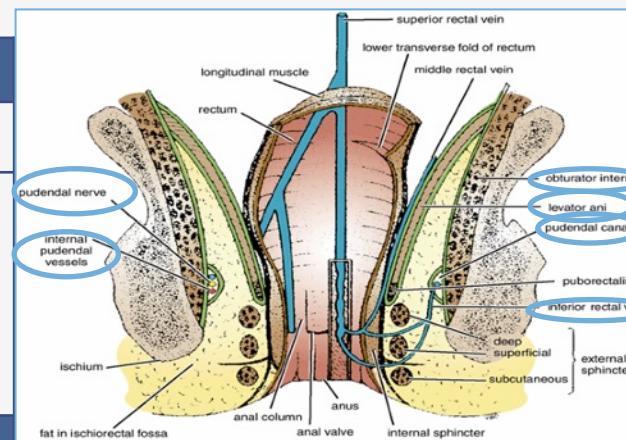

## Ischiorectal Fossa

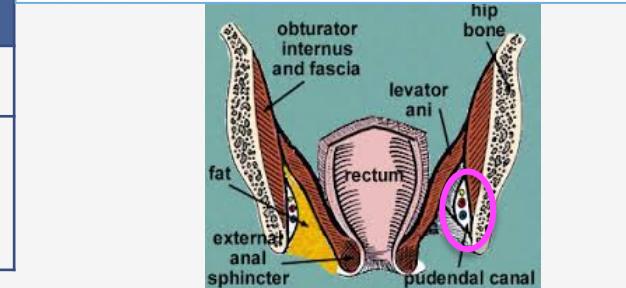

A fascial lined wedge-shaped space on each side of the anal canal.

Boundaries	Contents
<ul style="list-style-type: none"> <li><b>Base:</b> Skin of the perineum.</li> <li><b>Medial wall:</b> Levator ani &amp; anal canal.</li> <li><b>Lateral wall:</b> Obturator internus, covered with fascia.</li> </ul>	<ul style="list-style-type: none"> <li>Dense fat.</li> <li><b>Pudendal nerve &amp; internal pudendal vessels</b> within the <b>pudendal canal</b></li> <li><b>Inferior rectal nerve &amp; vessels</b> crossing the fossa to reach anal canal.</li> </ul>

## Pudendal Canal:

Definition	Contents
A <b>fascial canal</b> formed by <b>obturator fascia</b> , located on the lateral wall of the ischiorectal fossa	<b>Pudendal nerve.</b> Internal pudendal vessels.

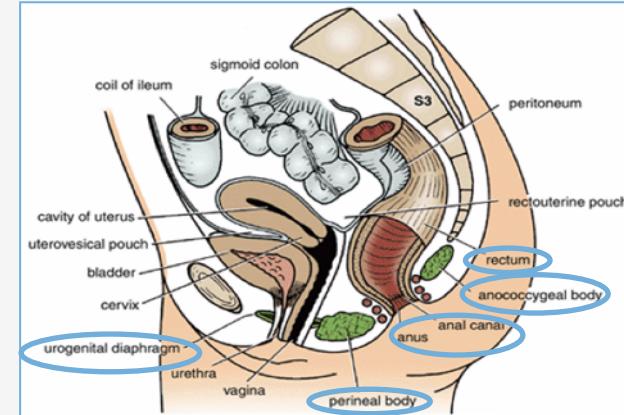

# Anal Canal

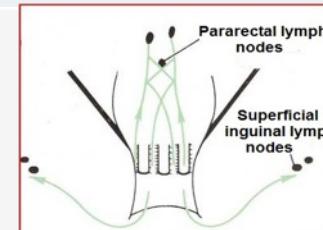

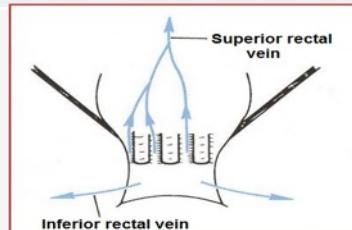

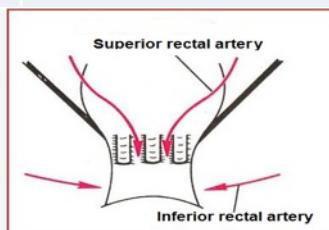

It is about 1.5 in. long, descending from the **rectal ampulla** to the **anus**.

Division		Relations
Upper half	Lower half	Anteriorly: Perineal body, urogenital diaphragm, and lower part of vagina Posteriorly: Anococcygeal body. Laterally: Ischiorectal fossae.
derived from hindgut (endoderm)	derived from the proctodeum (ectoderm)	

The two parts have different **blood supply**, **nerve supply** and **lymphatic drainage**.

Anal canal	Arterial supply	Venous drainage	Lymphatic drainage	Nerves
Upper half	<b>Superior rectal artery</b> (continuation of the inferior mesenteric artery)	<b>Superior rectal vein</b> drained into the inferior mesenteric vein ( <b>portal circulation</b> )	<b>Para-rectal nodes</b> drained into inferior mesenteric lymph nodes	<b>Visceral motor</b> (sympathetic & parasympathetic) & <b>sensory nerves</b>
Lower half	<b>Inferior rectal a.</b> (branch of internal pudendal artery)	<b>Inferior rectal vein</b> drained into the internal pudendal vein ( <b>Systemic circulation</b> ) ( <b>site of portal-systemic anastomosis</b> )	<b>Superficial inguinal lymph nodes</b>	<b>Somatic motor &amp; sensory nerves</b> -( <b>Inferior rectal N. branch of pudendal N.</b> ) <b>supplies</b> external sphincter muscle of the anus and that supply <b>the skin of the anal region</b> .

# Pudendal Nerve Block

**Pudendal nerve block** is used in **providing analgesia** for the **second stage of labour** and to provide **anesthesia of the perineum** in order to create or repair an **episiotomy**. Can be done by **transvaginally** or through **perineal approach**.

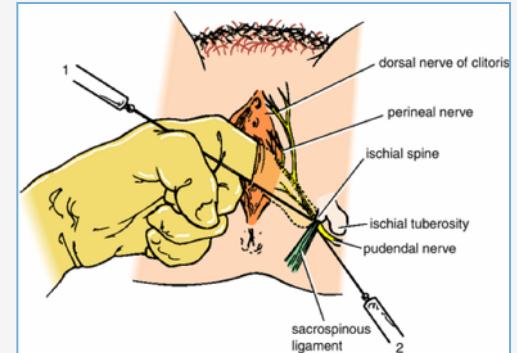

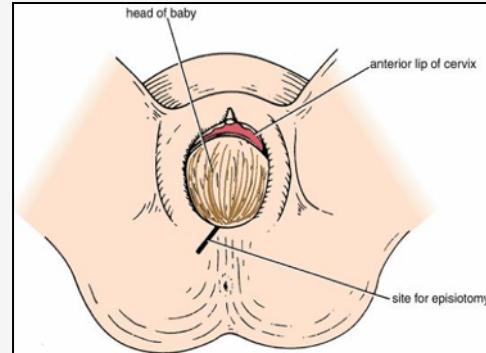

## Transvaginal method:

The needle is passed **through** the **vaginal mucous membrane** toward the **ischial spine**. After the needle is passed through the **sacrospinous ligament**, the **anesthetic solution** is **injected around the pudendal nerve**

## Perineal method:

The **ischial tuberosity** is **palpated subcutaneously** through the buttock. The needle is inserted on the **medial side of the ischial tuberosity** to a depth of about 1 in. (2.5 cm) from the free surface of the tuberosity. **The anesthetic is injected around the pudendal nerve.**

**An episiotomy** is a surgically planned incision on the perineum and the posterior vaginal wall **during second stage of labor to prevent perineal tear.**
