Platelet Structure & Function

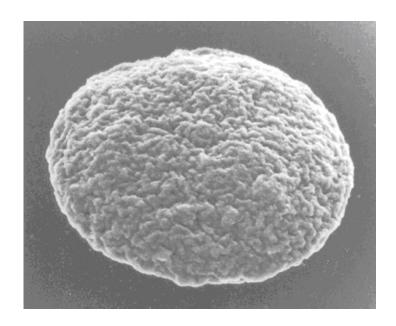

Dr. Abeer Al-Ghumlas MB.BS, MSc, Ph-D

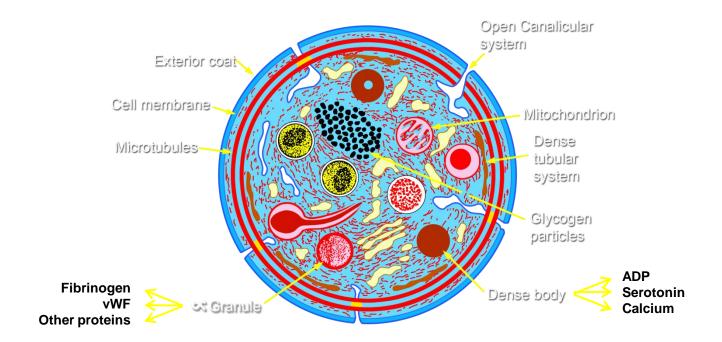

Objectives

- -- Understand platelet normal ultrastructure
- -- Understand the functions of different platelets organelles and surface receptors
- -- Understand the mechanisms of platelet functions
- Relate membrane receptors and granule content to normal function in hemostasis and bleeding (platelet) disorders

Platelet ultra-structure

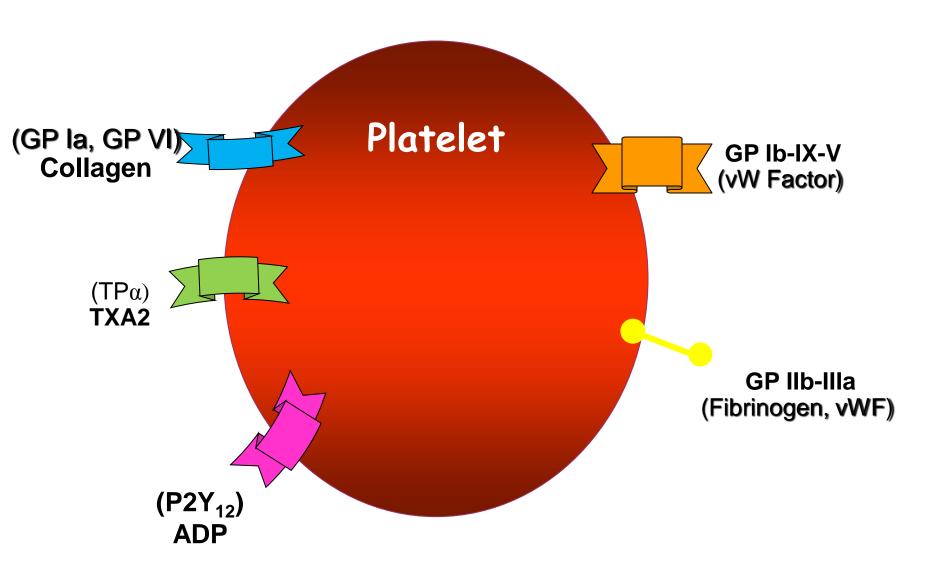

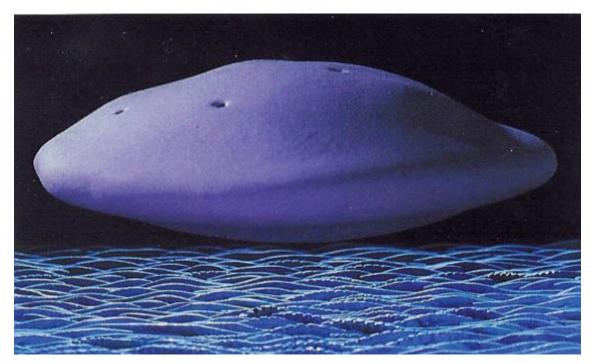

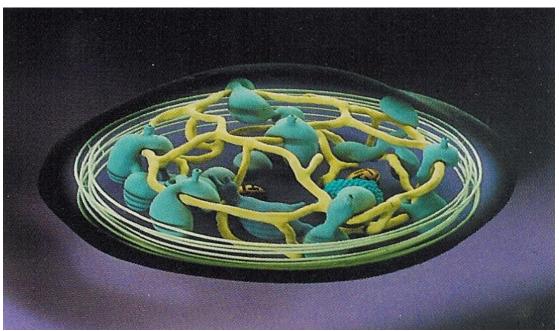

(Thrombocytes)

- · Anuclear and discoic cell → spherical when activated
- Platelet count = $150 \times 10^3 300 \times 10^{3} / \text{ml}$
- Size: 1.5-3.0 μm
- · Life span: 7-10 days
- Sequestered in the spleen; hypersplenism may lead to low platelet counts.

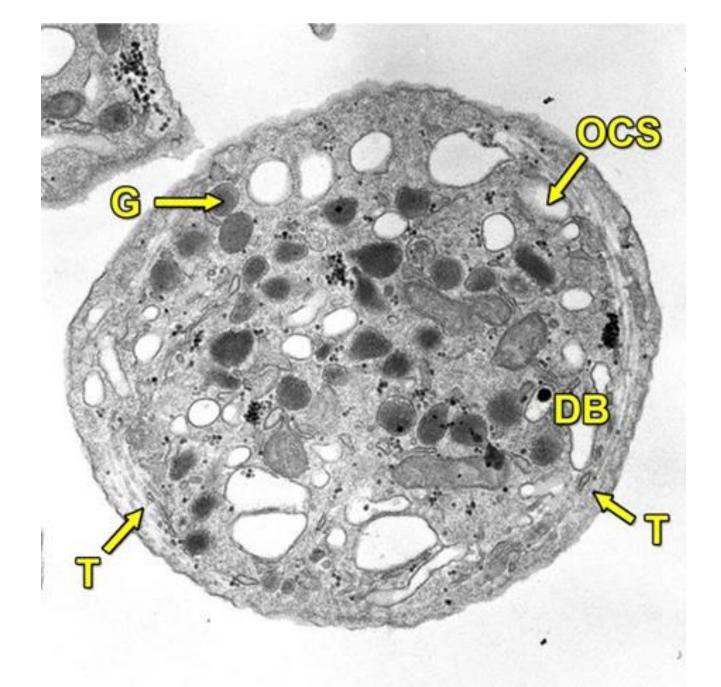

Platelet Receptors

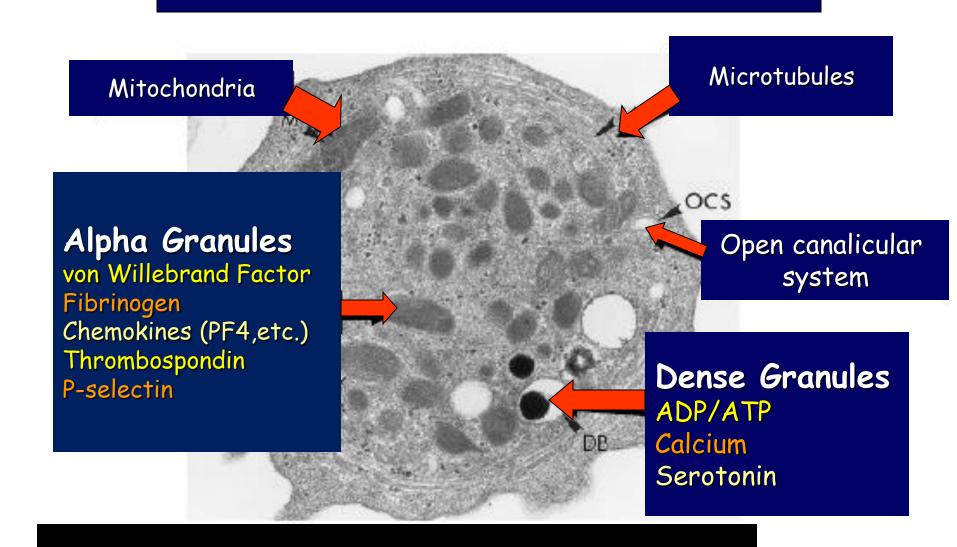

Platelet EM

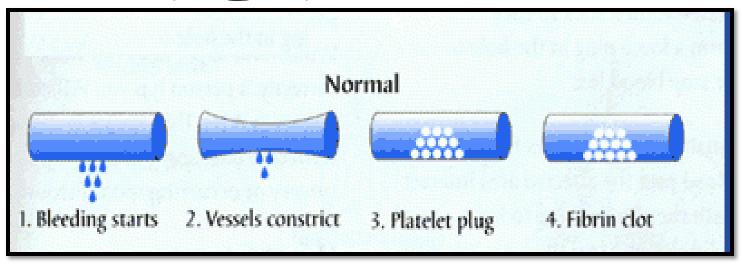

Platelet Ultrastructure

General functions of the platelets

HEMOSTASIS

- 1. VASCULAR PHASE
- 2. PLATELET PHASE
- 3. COAGULATION PHASE
- 4. FIBRINOLYTIC PHASE

Hemostatic Mechanisms

- 1. Vessel wall
- 2. Platelet
- 3. Blood coagulation
- 4. Fibrinolytic system

Platelet activation:

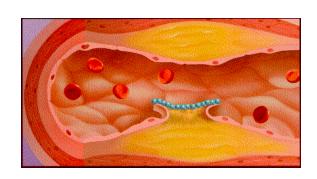

- 1. Adhesion
- 2. Shape change
- 3. Aggregation
- 4. Release reaction
- 5. Clot retraction

Platelet Activation

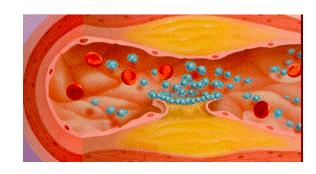

- Adhesion
- Aggregation
- · Release
- · Clot Retraction

Platelet function

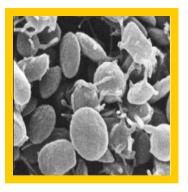

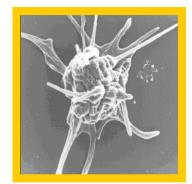

Adhesion

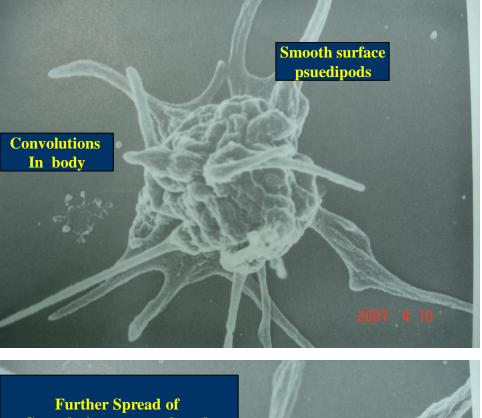

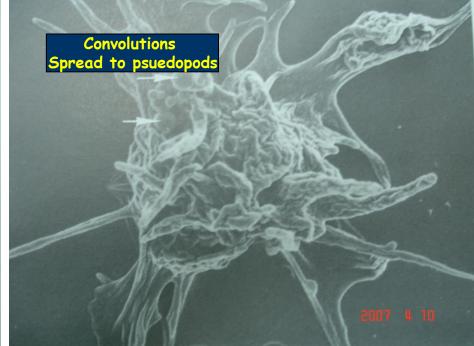

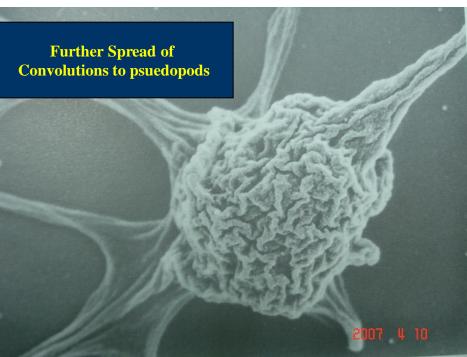

Activation

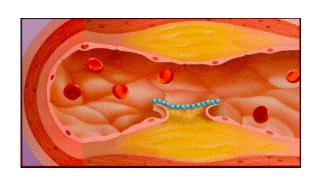

Platelet Aggregation

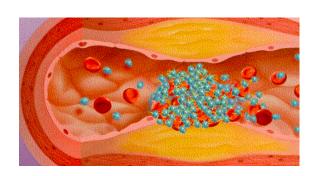

· Aggregation:

Fibrinogen is needed to join platelets to each other via platelet fibrinogen receptors

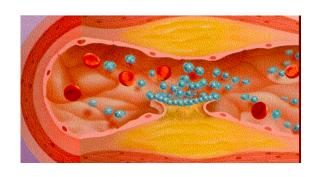

Platelet function

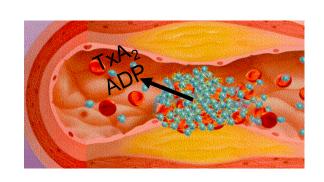

Adhesion

Aggregation

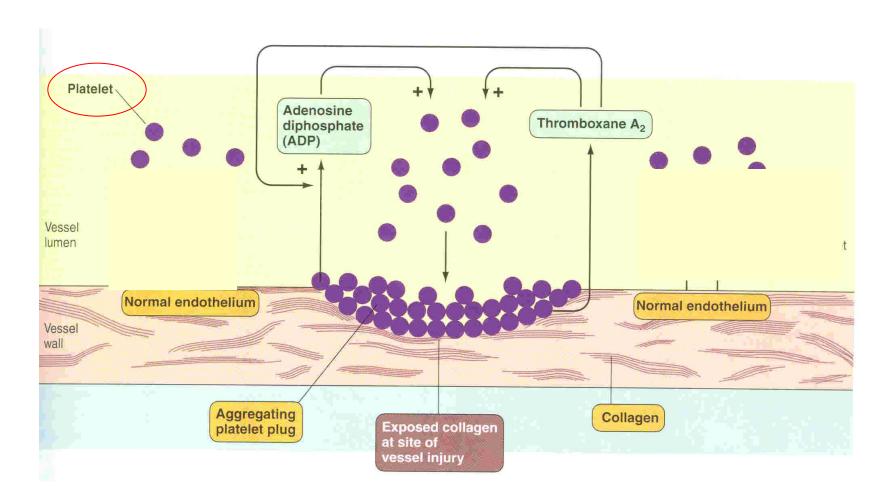

Activation

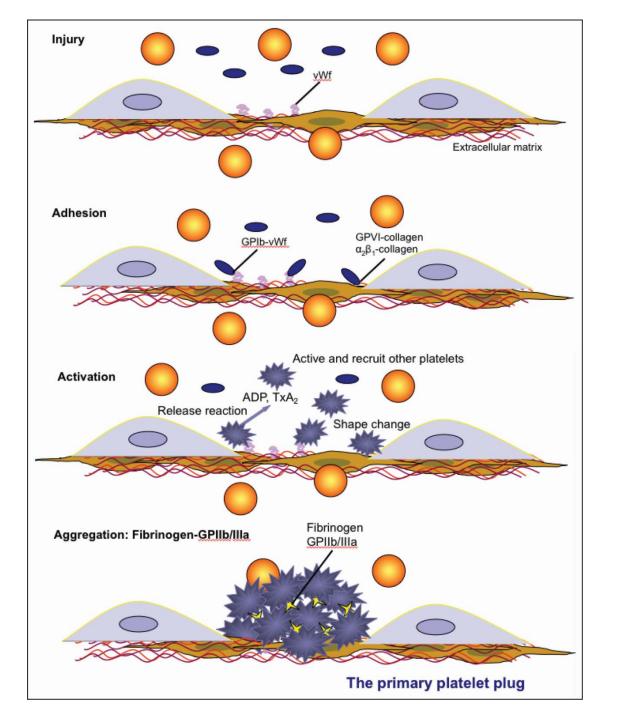

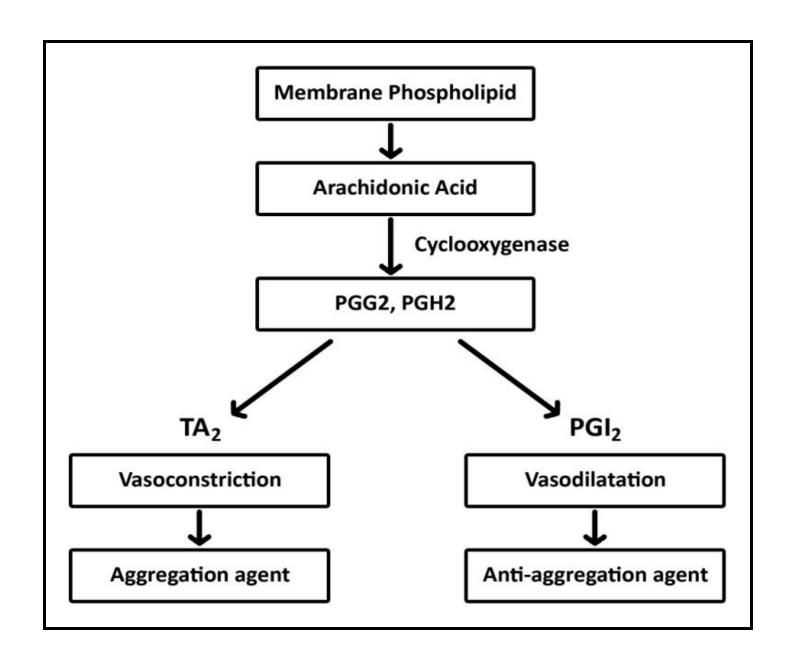

Secretion

Resting platelet activated platelet Fibrinogen Agonist GP IIb/IIIa receptors **Aggregating platelets**

Platelets aggregation

Activated Platelets

Secrete:

- 1. ADP
- 2. $5HT \rightarrow vasoconstriction$
- 3. Platelet phospholipid (PF3) \rightarrow clot formation
- 4. Thromboxane A2 (TXA2) is a prostaglandin formed from arachidonic acid

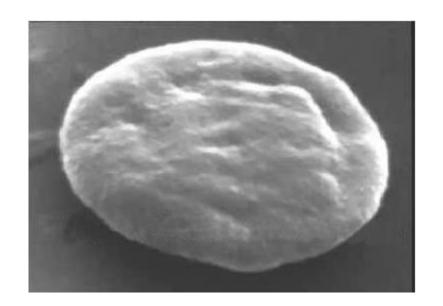

Function:

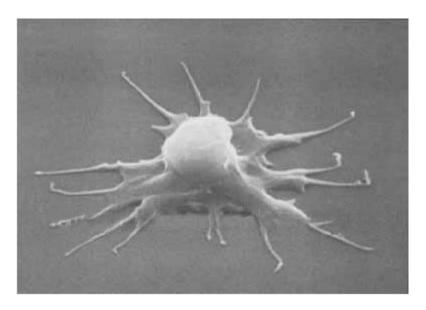

- vasoconstriction
- Platelet aggregation
 (TXA2 inhibited by aspirin)

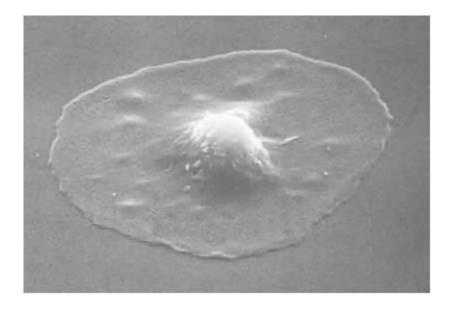

Platelet Activation

· Clot Retraction:

Myosin and actin filaments in platelets are stimulated to contract during aggregation further reinforcing the plug and help release of granule contents

Platelet haemostatic plug formation

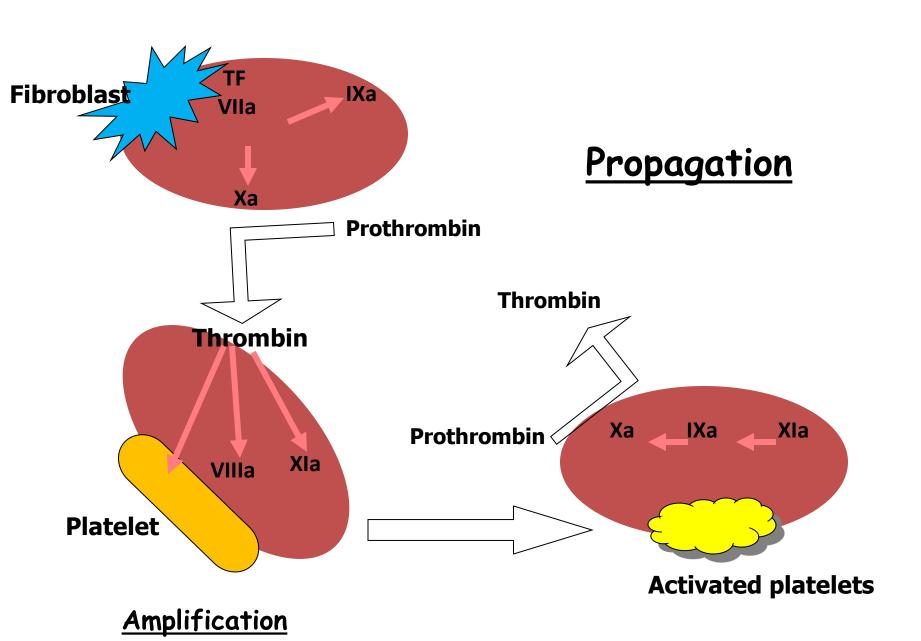

- Platelets activated by adhesion
- Extend projections to make contact with each other
- Release: thromboxane A2, serotonin & ADP >>> activating other platelets
- Serotonin & thromboxane A2 are vasoconstrictors decreasing blood flow through the injured vessel.
- ADP causes stickiness and enhances aggregation

Functions of the platelets..cont

Role of platelet in blood coagulation

(The cell based model of blood coagulation)

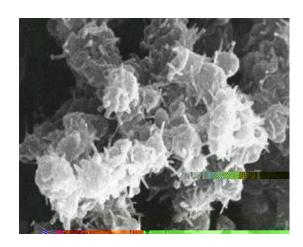

Cell based model

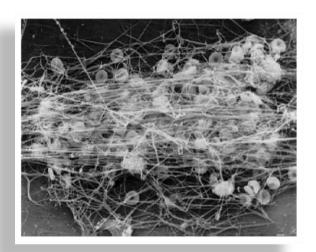

Platelet function: Maintenance of vascular integrity

➤ Initial arrest of bleeding by platelet plug formation

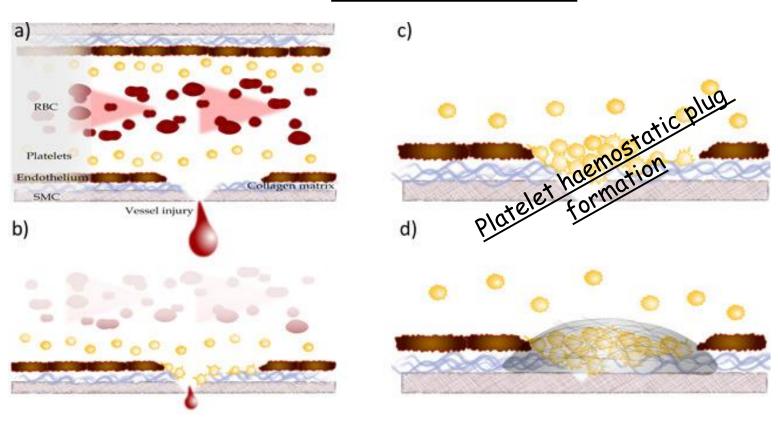

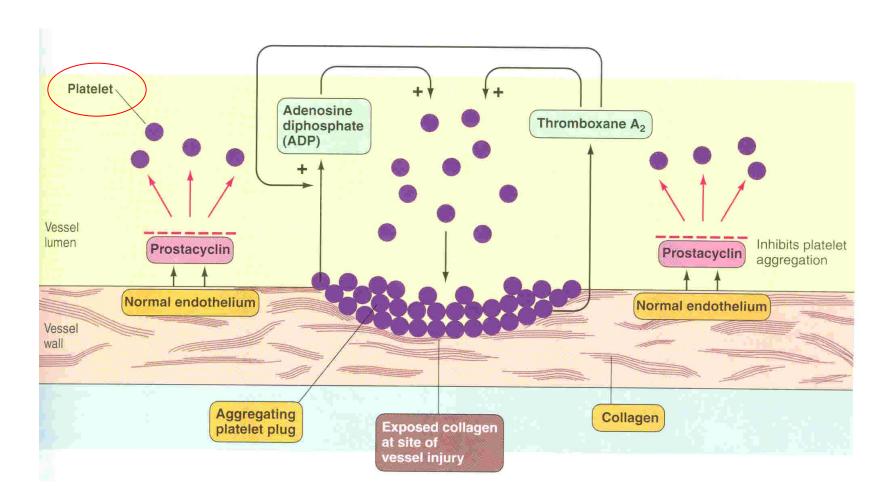

Adequate number and function of platelet is essential to participate optimally in haemostasis

Platelet haemostatic plug formation

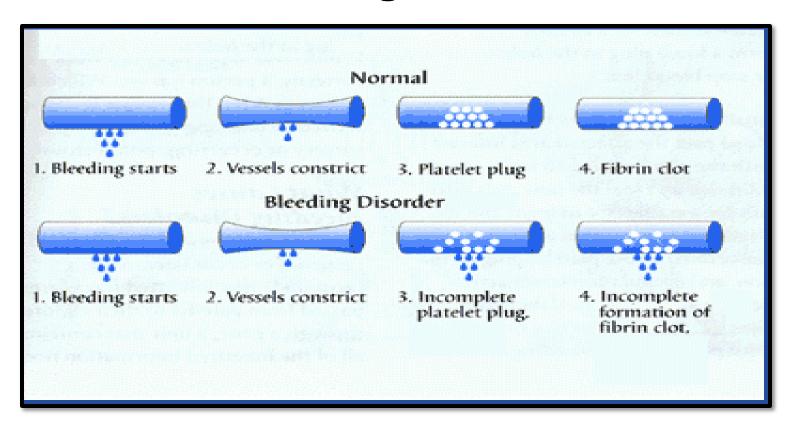

Platelets aggregation

Platelet Activation-summary

- Platelets are activated when brought into contact with collagen exposed when the endothelial blood vessel lining is damaged
- Activated platelets release a number of different coagulation and platelet activating factors
- Transport of negatively charged <u>phospholipids</u> to the platelet surface; provide a catalytic surface for coagulation cascade to occur
- Platelets adhesion receptors (integrins): Platelets adhere to each other via adhesion receptors forming a hemostatic plug with fibrin
- Myosin and actin filaments in platelets are stimulated to contract during aggregation further reinforcing the plug and help release of granule contents
- GPIIb/IIIa: the most common platelet adhesion receptor for fibrinogen and von Willebrand factor (vWF)

Bleeding Disorders

- Bleeding can result from:
 - Platelet defects:
 deficiency in number (thrombocytopenia)
 defect in function.

(Thrombocytopenia)

The causes of decreased platelet counts are:

Decreased Production

Leukemia or lymphoma

Cancer treatments such as radiation or chemotherapy

Various anemias

Toxic chemicals

Medications: diuretics, chloramphenicol

Viruses: chickenpox, mumps, Epstein-Barr, parvovirus, AIDS

Alcohol in excess

Genetic conditions: Wiskott-Aldrich, May-Hegglin,

Abnormal distribution

Splenomegaly with sequestration in the spleen

Increased destruction

Autoimmune diseases: Idiopathic (immune) thrombocytopenic purpura

Medications: quinine, antibiotics containing sulfa, Dilantin®, vancomycin,

rifampin, heparin-induced thrombocytopenia

Surgery: man-made heart valves, blood vessel grafts, bypass machines

Infection: septicemia

Pregnancy: about 5% of pregnant women develop mild decrease Thrombotic thrombocytopenic purpura

Disseminated intravascular coagulation

• Pseudothrombocytopenia

Partial clotting of specimen

EDTA-platelet clumping

Platelet satellitism around WBCs

Cold agglutinins

Giant platelets

Congenital Platelet Disorders

Disorders of Adhesion:

. Bernard-Soulier

Disorder of Aggregation:

. Glanzmann thrombosthenia

Disorders of Granules:

- . Grey Platelet Syndrome
- . Storage Pool deficiency
- . Hermansky-Pudlak syndrome
- .Chediak-Higashi syndrome

Disorders of Cytoskeleton:

. Wiskott-Aldrich syndrome

Disorders of Primary Secretion:

. Receptor defects (TXA2, collagen ADP, epinephrine)

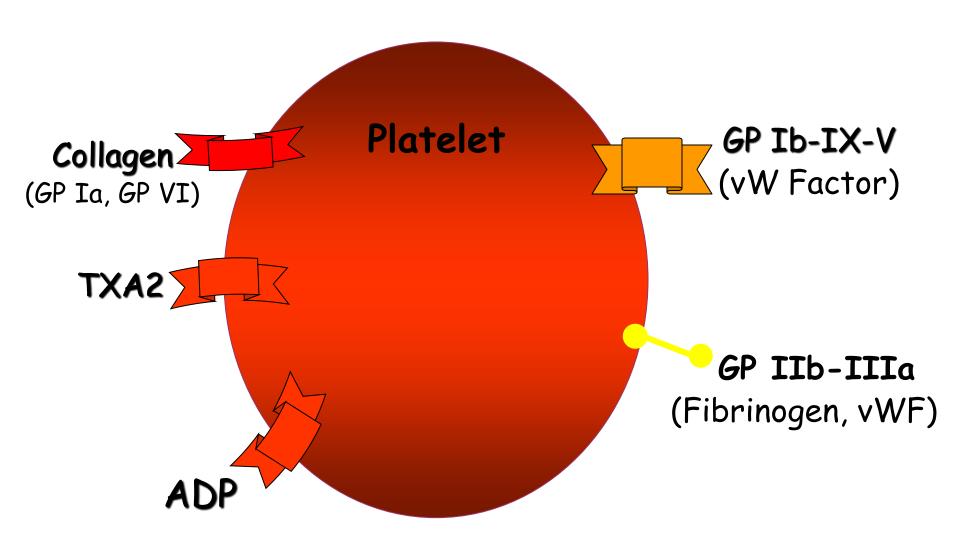

Disorders of Production:

- . Congenital amegakaryocytic thrombocytopenia
- . MYH9 related disorders
- . Thrombocytopenia with absent radii (TAR)
- . Paris-Trousseau/Jacobsen

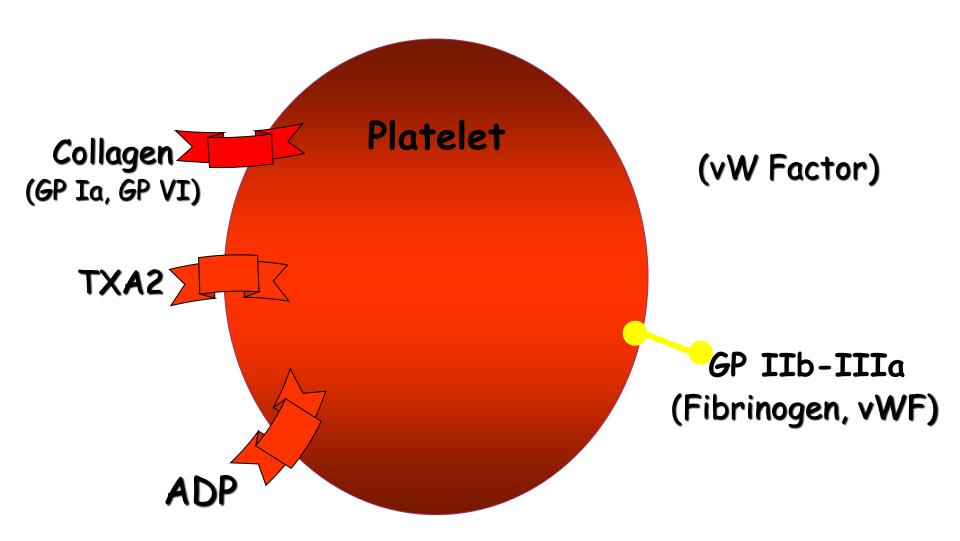

Platelet Activation

- · Adhesion:
- · Shape change
- · Aggregation
- · Release
- Clot Retraction

Bernard-Soulier Syndrome

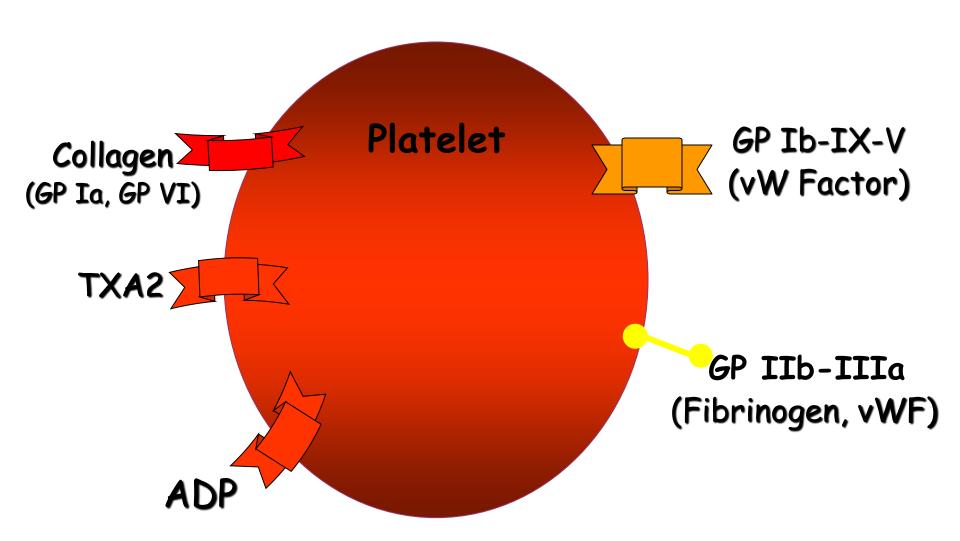

Bernard-Soulier Syndrome

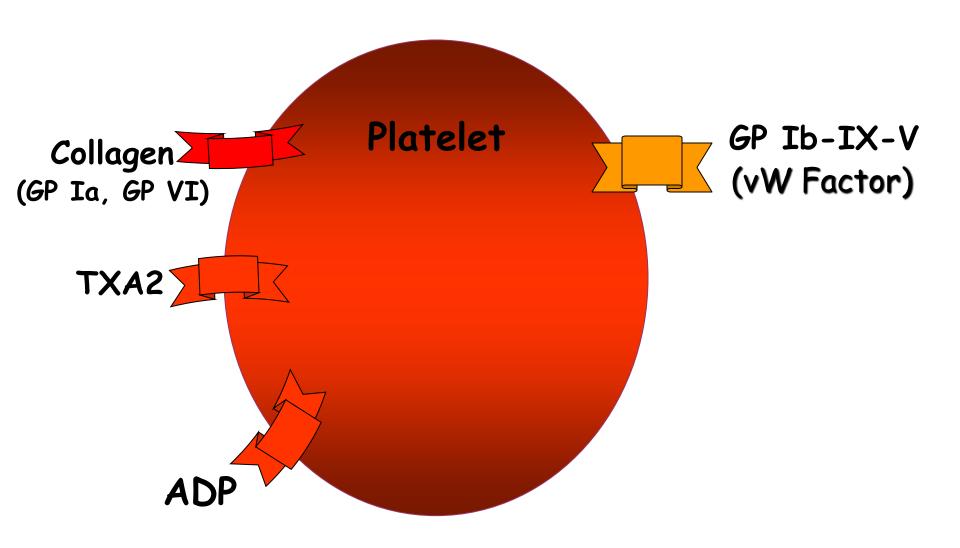

Platelet Activation

- · Adhesion: Bernard-Soulier Syndrome (BSS)
- Shape change
- Aggregation
- Release
- Clot Retraction

Glanzmann Thromasthenia

Glanzmann Thromasthenia

Platelet Activation

- · Adhesion:
- · Shape change
- · Aggregation Glanzmann Thrombashenia
- Release
- Clot Retraction

How to investigate for a platelet disorder?

Laboratory Testing of Platelet Functions

- Platelet count (& shape)
- · Electron-microscopy
- Bleeding time
- · Platelet Aggregation
- Platelet Function Analyzer (PFA-100)
- Flow-cytometry
- · Granule release products

Bleeding Time

platelet function test

Platelet Aggregometry

Laboratory Testing of Platelet Functions

Platelet Aggregation

in (PRP) Platelet rich plasma):

Provides information on time course of plat. activation.

Agonists:

ADP

Adrenaline

Collagen

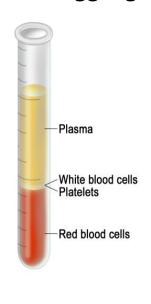

Arachidonic acid

Ristocetin

Thrombin

Reference ranges need to be determined for each agonist

Platelet Aggregation

Agonists:

- ·Adrenaline
- CollagenArachidonic acid
- •Ristocetin
- Thrombin

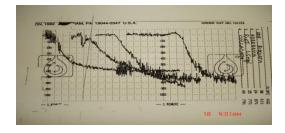

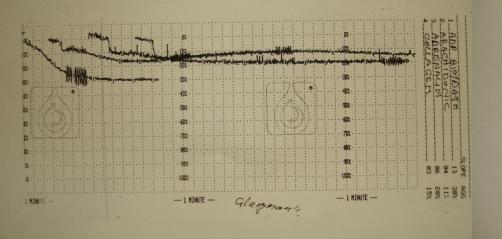

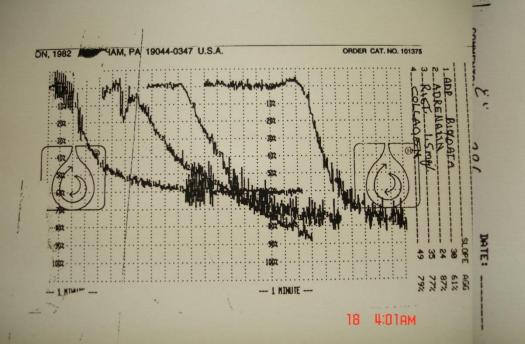

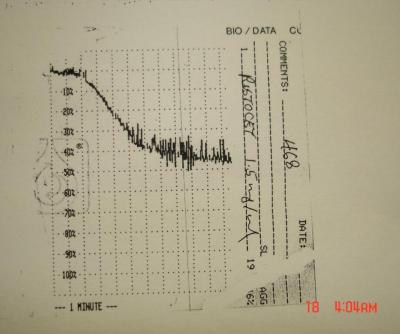

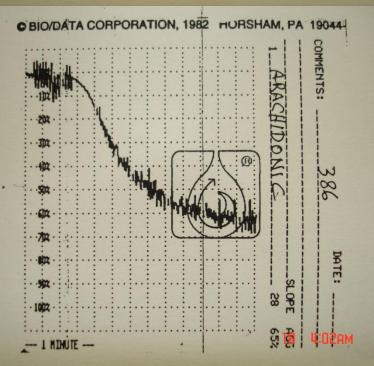

summary

-platelets are cell fragments derived from megakaryocyte in the bone marrow.

-Platelets play a pivotal role in haemostasis by arresting bleeding from an injured blood vessels

Bleeding can result from: Platelet defects acquired or congenital
