HISTOLOGY
435

Identify : Esophagus

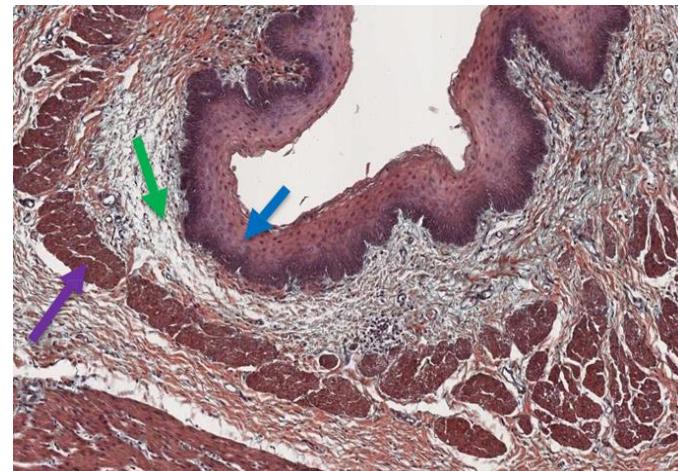

1. Mucosa:

A) Epithelial Lining:

Non-Keratinized Stratified Squamous Epithelium.

B) Lamina propria.

C) Muscularis mucosae.

2. Submucosa:

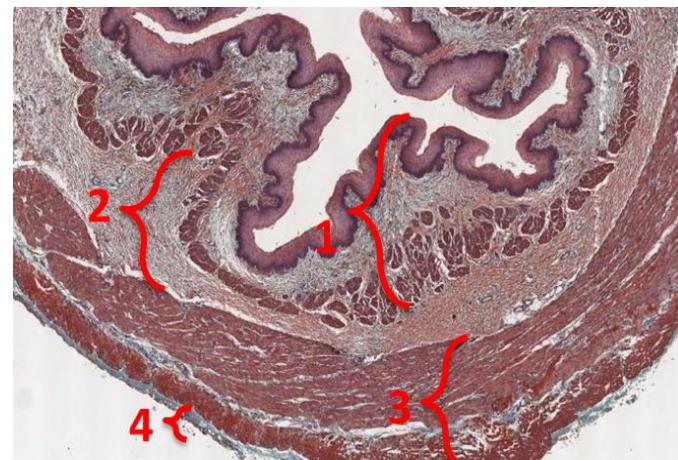

Contain glands , Meissner's plexus.

3. Muscularis Externa: (2 layers) :

(upper 1/3 skeletal, middle 1/3 mixed, lower 1/3 smooth)

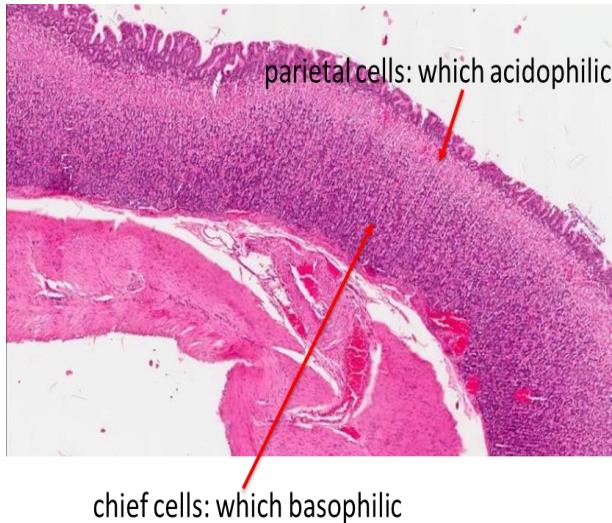

- Inner circular layer.
- Outer longitudinal layer.
- Auerbach's (myenteric) plexus in between the 2 layers.

4. Serosa (in abdominal part) or adventitia (in cervical and thoracic part)

Identify : Fundus of stomach

1. Mucosa:

- A. **Epithelial Lining:** Simple columnar mucus-secreting cells.
- B. **Lamina propria:**
- C. **Fundic Glands:** Short pits with simple branched glands .It is rich in parietal and chief cells. (Fundic glands are found in the lamina propria)
- D. **Muscularis mucosae**

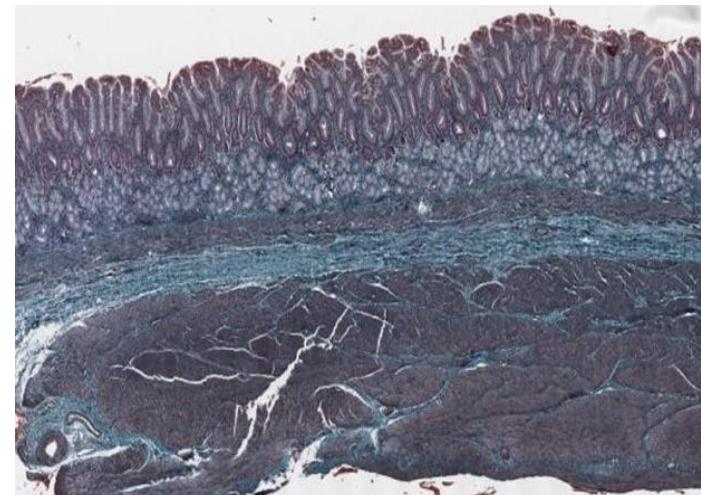

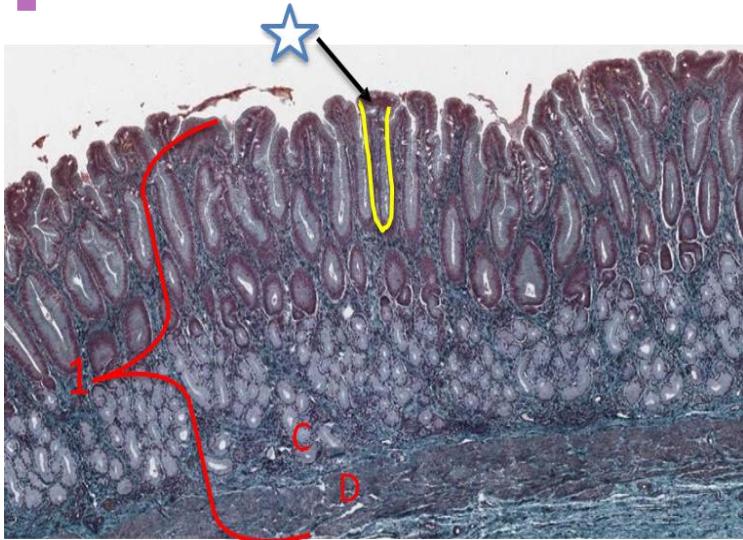

2. Submucosa.

3. Muscularis Externa: (3 layers) :

Inner oblique layer.
Middle circular layer.
Outer longitudinal layer.
Auerbach's(myenteric) plexus.

4. Serosa ONLY

Identify : Pylorus of stomach

1. Mucosa:

A. Epithelial Lining: Simple columnar mucus-secreting cells.

B. Pyloric Glands:

Deep pits with branched and convoluted glands.

C. Lamina propria: Loose C.T contains **pyloric gland**.

mucous-neck cells

D. Muscularis mucosae

2. Submucosa.

3. Muscularis Externa: (2 layers) :

Inner circular layer.
Outer longitudinal layer.
Auerbach's(myenteric) plexus

4. Serosa ONLY

Identify : Duodenum

1. Mucosa:

([Crypts](#) and [villi](#))

A) Epithelial Lining:

1. Villi : Simple columnar epithelium absorptive cells with goblet cells.
2. Crypts of lieberkuhn : Simple columnar epith. With goblet cells, stem cells, enteroendocrine cells, and Paneth cells(Paneth cells located in base of crypt).

B) Lamina propria

D) Muscularis mucosae

2. Submucosa:

Contains **Brunner's glands** which secrete mucus.

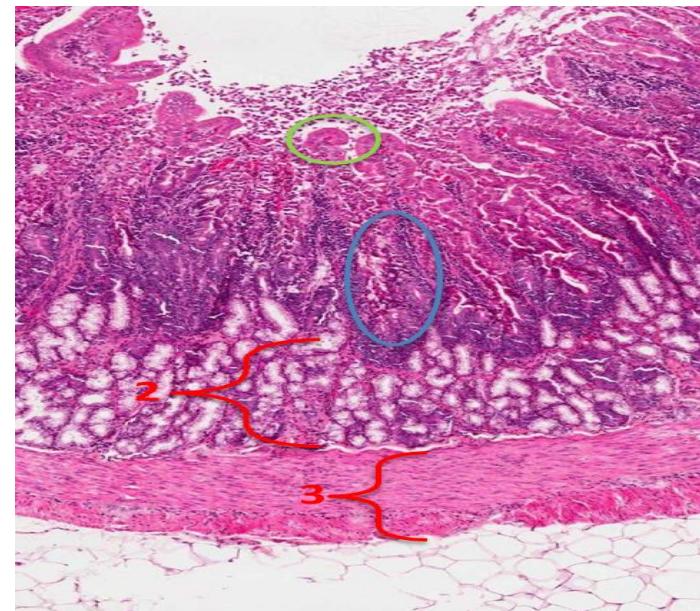

3. Muscularis Externa: (2 layers)

Inner circular layer.

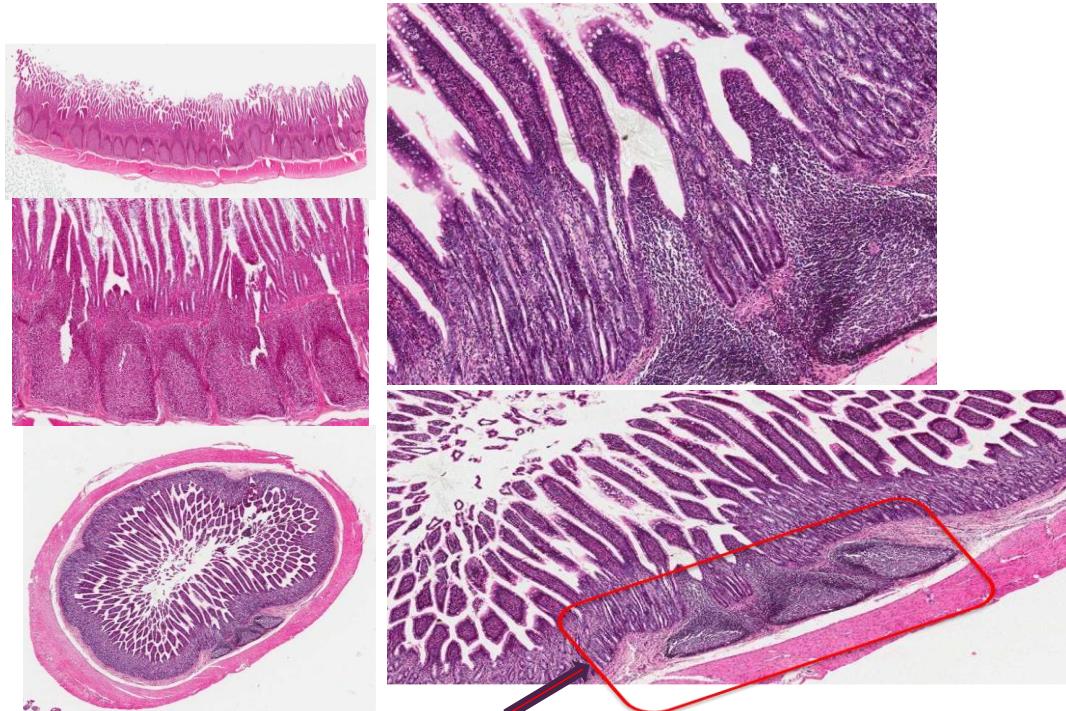

Outer longitudinal layer.

4. Serosa:

in upper part and Adventitia in 2nd & 3rd parts.

Identify : Ileum

Peyer's Pathches is in front of mesentery attachment

1. Mucosa: (Crypts and villi)

A) **Epithelial Lining:** Similar to the duodenum,
Simple columnar epithelium with goblet cells.

B) **Lamina propria:** Has lymphoid nodules (**Peyer's patches**).

that extend to the submucosa.

C) **Muscularis mucosae**

2. Submucosa

2. Muscularis Externa: **(2 layers)**

- Inner circular layer.
- Outer longitudinal layer.

4. Serosa

Identify : Colon

1. Mucosa: (Crypts ONLY)

A) Epithelial Lining:

Simple columnar epithelium with goblet cells.

B) Lamina propria:

Contains frequent lymphatic nodules (White circle)

D) Muscularis mucosae.

2. Submucosa.

3. Muscularis Externa: (2 layers)

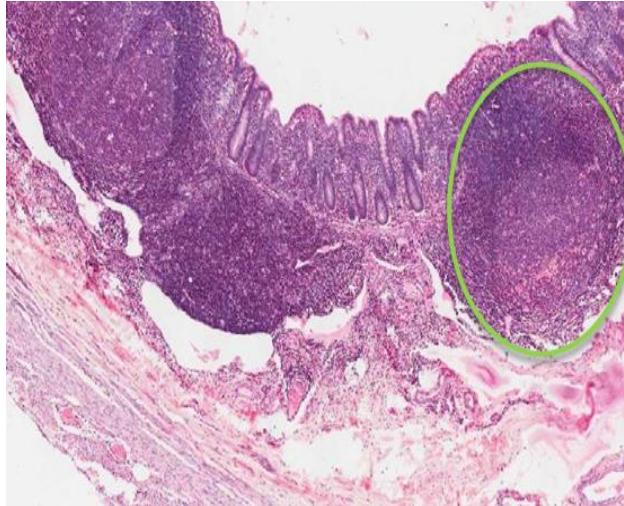

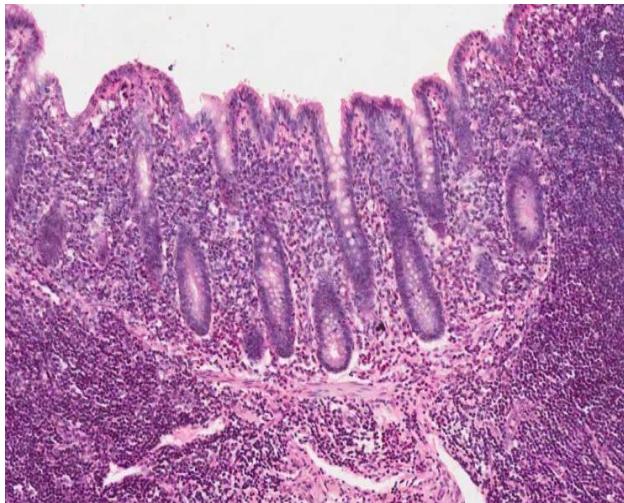

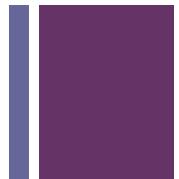

- Inner circular layer.
- Outer longitudinal layer. (has Teniae coli).

4. Serosa (has appendices epiploicae).

Cells lining the crypts are:

1. Surface columnar absorptive cells.
2. Goblet cells.
3. Enteroendocrine cells.
4. Stem cells.
5. M-cells.

Identify : Appendix

1. Mucosa:
(shallow Crypts ONLY)

A) Epithelial Lining:

Similar to the colon,
Simple columnar epithelium
with **goblet cells**.

B) Lamina propria:

Contains lymphatic nodules.

D) Muscularis mucosae.

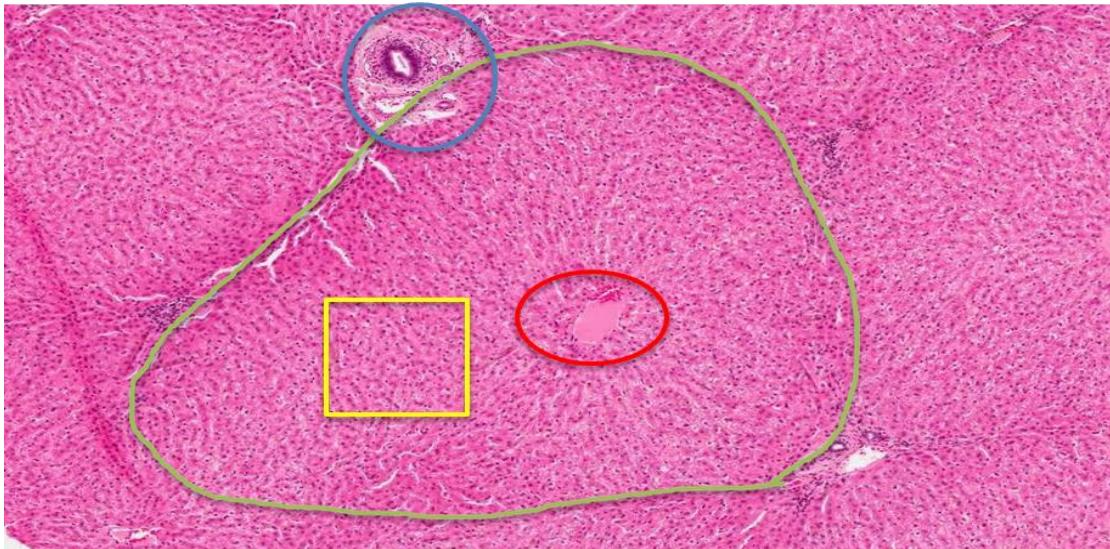

2. Submucosa

3. Muscularis Externa:
(2 layers)

- Inner circular layer.
- Outer longitudinal layer.

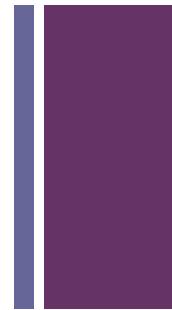

4. Serosa

Identify : Liver

Features:

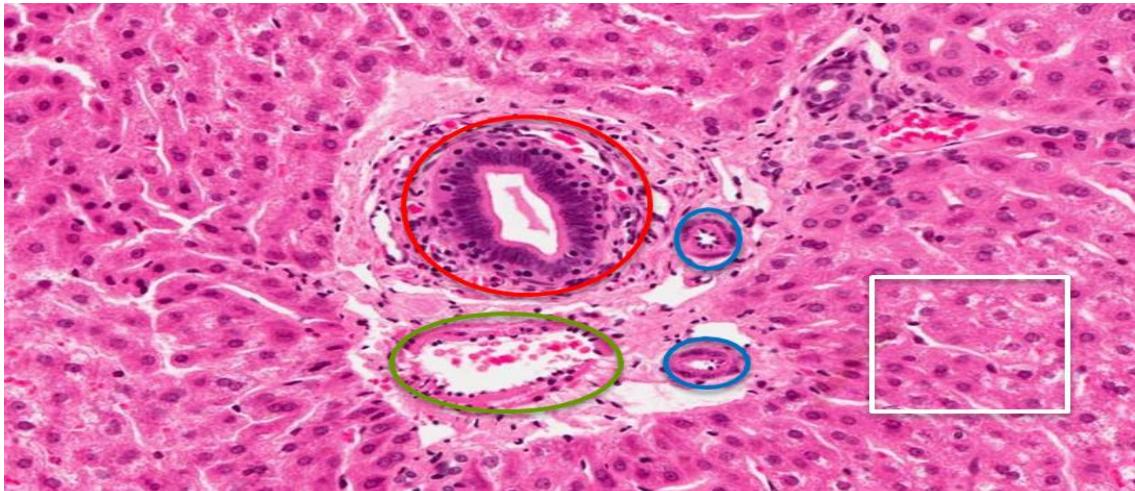

- 1-Classical hepatic lobule.
- 2-Central hepatic vein.
- 3-Portal area.
- 4- C.T.

Mention four cells in the square:

- HEPATOCYTES.
- ITO CELLS
- KUPFFER CELLS
- CELLS OF ENDOTHELIAL

Identify : Portal Area

Features:

- 1-Bile Duct.
- 2-Branch of hepatic artery.
- 3-Branch of portal vein.

Mention four cells in the square:

- HEPATOCYTES.
- ITO CELLS
- KUPFFER CELLS
- CELLS OF ENDOTHELIAL

Identify : GallBladder

1. Mucosa: (highly folded)

A) Epithelial Lining:

Simple columnar epithelium.

B) Lamina propria:

contains **mucous glands** in the **neck** of gall bladder.

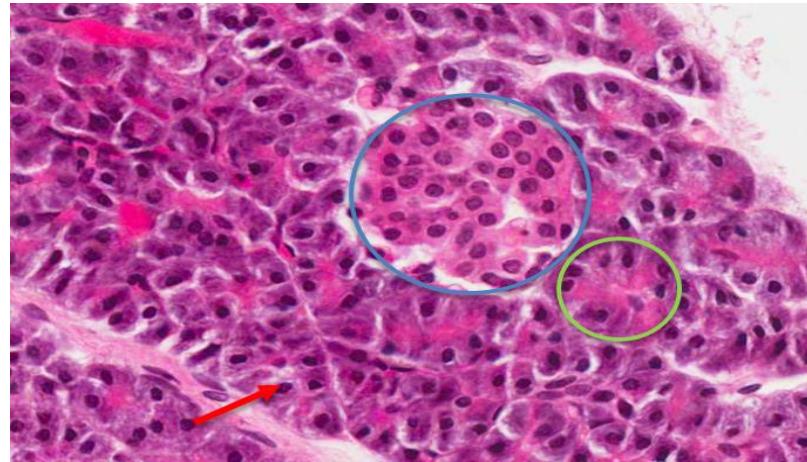

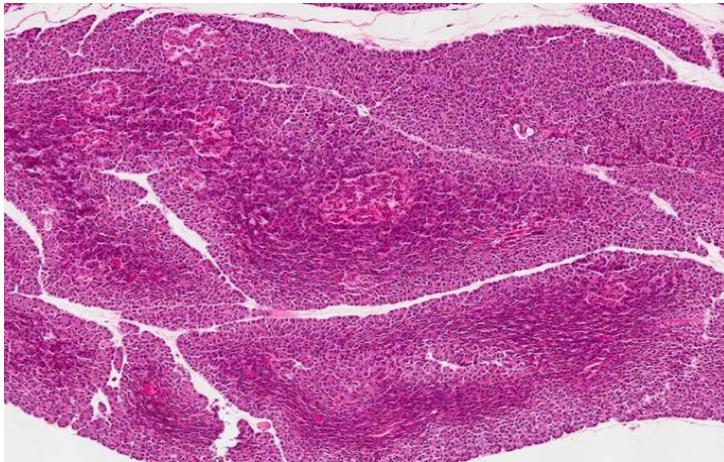

2. Muscularis.

3. Serosa or adventitia.

Identify : Pancreas

Features:

1-Islets of Langerhans

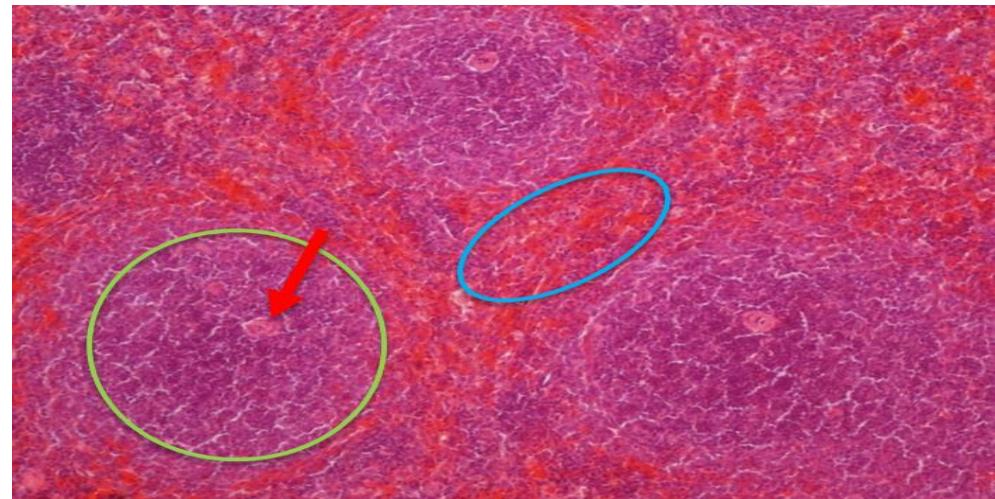

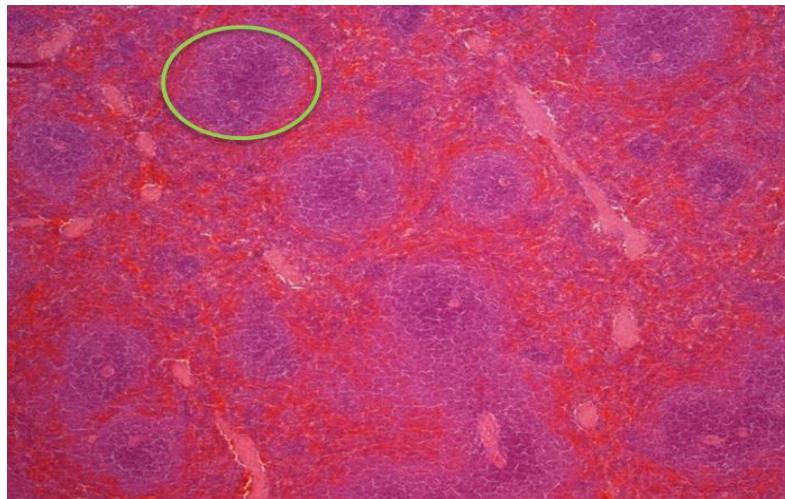

2-Pancreatic acini

3-Centroacinaarcells:

- Basal part basophilic due to abundant rER (Rough endoplasmic reticulum)
- Apical part acidophilic due to granules

Identify : Spleen

Features:

1-White pulp

1-Periarterial lymphatic sheaths (PALS):

housing T lymphocytes.

2-Lymphoid follicles (with germinal centers):

housing B lymphocytes **and macrophages.**

2-Central artery

3-Red pulp:

A- Splenic (pulp) cords (Bilroth's cord):

Extravasated blood cells, plasma cells, macrophages & reticular cells and fibers.

B- Splenic blood sinusoids.
