## **OBJECTIVES**

At the end of this lecture you should be able to describe:

- Nociceptors, Referred Pain, radiating pain
- "Gating" of Pain
- Pain Suppression ("Analgesia") System in the Brain and Spinal Cord
- Transcutaneous Electrical Nerve Stimulation (TENS)
- Transcranial Direct Current Stimulation (tDCS)
- Applied aspects of pain

## **Nociceptive & Neuropathic Pain**

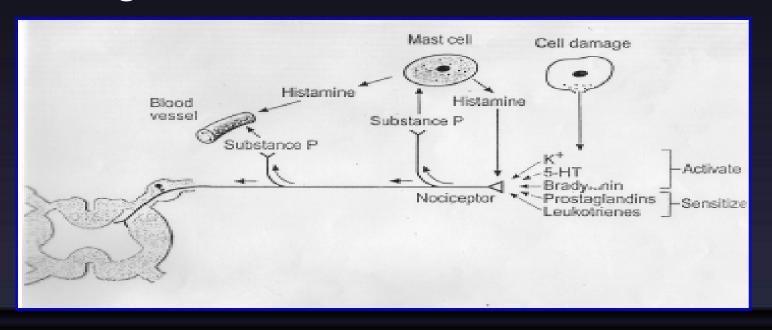

- Nociceptive pain is detected by specialized transducers connected to A-delta and C-fibers (stimuli from somatic and visceral structures)
- Neuropathic pain damage to nerves (trigeminal neuralgia, postherpetic pain, diabetic neuropathy)

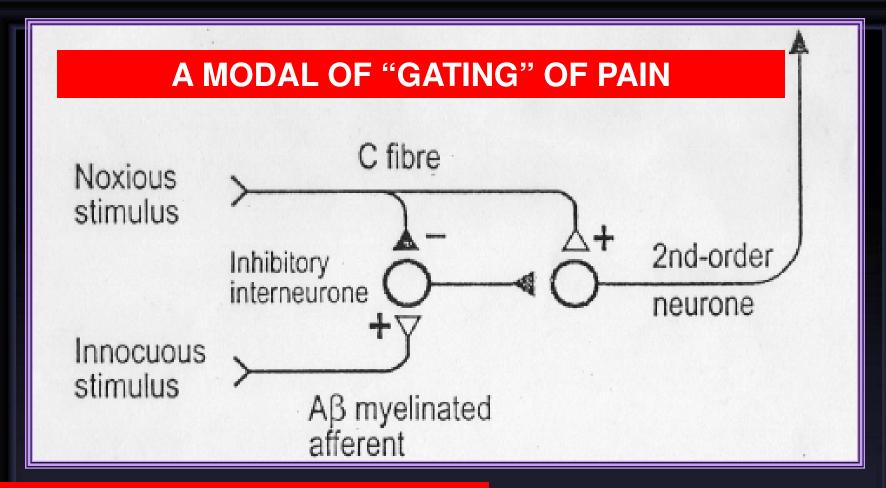

#### **4 Basic Processes**

- 1. Transduction—nociceptors free nerve endings
- 2. Transmission
- 3. Perception of Pain-At cortical Level
- 4. Modulation of Pain, Changing or inhibiting pain impulses in the descending tract (brain→ spinal cord) [norepinephrine and serotonin]

## Chemical agents that produce pain

- Nociceptors are activated by: Bradykinin, serotonin, Histamine, K+ ion, Acids, acetyl choline, & proteolytic enzymes.
- Nociceptors are sensitized by: Prostaglandins & substance P

Implies a non-painful stimulus can block the transmission of a noxious stimulus. Is based on the premise that the gate, located in the dorsal horn of the spinal cord, modulates the afferent nerve impulses.

- 1. A-Delta fibres (sharp pain)
- 2. C fibres (dull pain)
- 3. A-Beta fibres that carry messages of light touch

## Conditions that open or close the gate

	Conditions that open the gate	Conditions that close the gate	
Physical conditions	Extent of the injury	Medication	
	Inappropriate activity level	Counterstimulation, eg massage	
Emotional Conditions	Anxiety or worry	Positive emotions	
	Tamaian	5 I	
	Tension	Relaxation	
	Depression	Relaxation	
Mental conditions			

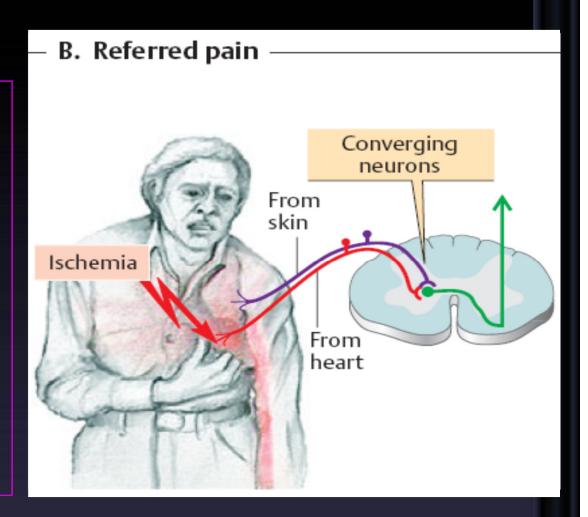

## REFERRED PAIN

- Pain that is not felt in the diseased structure itself, but at another place in the body far away from the site of origin.
- Visceral and deep somatic pain are often referred, but superficial pain is not.
- Mechanism of referred pain
  - Convergence of peripheral & visceral pain on the same second order neuron that project to brain
  - Facilitation theory: Impulses from diseased viscus pass through afferents which give collaterals to ST neurons receiving pain fibers from skin dermatomes

## REFERRED PAIN

## Convergence

Branches of visceral pain fibers synapse in the spinal cord on the same second-order Neurons that receive pain signals from the skin

## REFERRED PAIN

When visceral pain is referred to the surface of the body, the person generally localizes it in the dermatomal segment from which the visceral organ originated in the embryo, not necessarily where the visceral organ now lies.

### **Dermatomal rule**

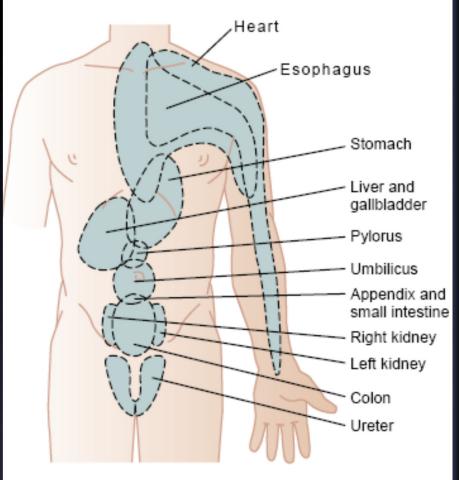

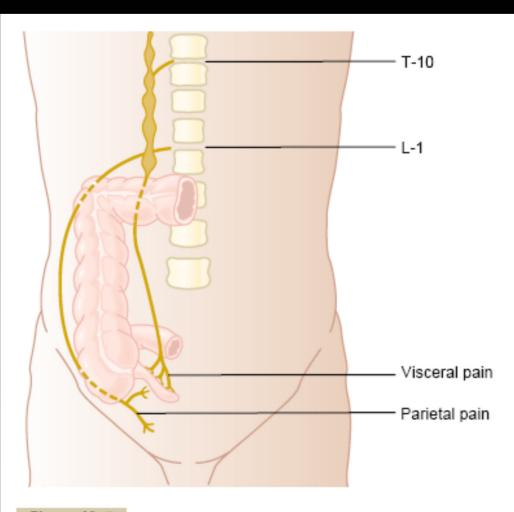

Figure 48-6

Surface areas of referred pain from different visceral organs.

## REFERRED PAIN

Localization of Visceral Pain "Visceral" and the "Parietal" Pain Transmission Pathways

When pain is both localized and referred it is called radiating pain

#### Figure 48-7

Visceral and parietal transmission of pain signals from the appendix.

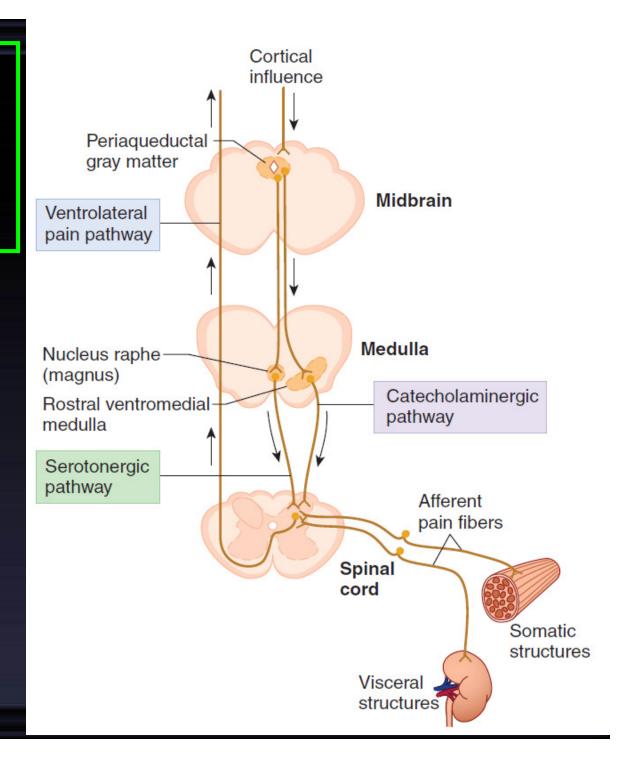

أَخْبَرَنَا أَحْمَدُ بْنُ جَعْفَرِ بْنِ حَمْدَانَ ، ثنا بِشْرُ بْنُ مُوسَى ، ثنا أَبُو عَبْدِ الرَّحْمَنِ الْمُقْرِئُ ثنا سِعِيدُ بْنُ أَبِي مَالِحٍ ، عَنْ أَبِي صَالِحٍ ، عَنْ أَبِي هُرَيْرَةَ ، أَبِي اللَّهِ صَلَّح اللَّهُ عَلَيْهِ وَسَلَّمَ ، أَنَّهُ قَالَ : عَنْ رَسُولِ اللَّهِ صَلَّى اللَّهُ عَلَيْهِ وَسَلَّمَ ، أَنَّهُ قَالَ : الشَّهِيدُ لا يَجِدُ أَلَمَ الْقَتْلِ ، إلا كَمَا يَجِدُ أَلَمَ الْقَرْ صَنَهُ اللَّهُ عَلَيْهِ وَسَنَّا اللَّهُ عَلَيْهِ وَسَنَّهُ وَاللَّهُ اللَّهُ الْمُعْمَلُ اللَّهُ الْمُعْمِلُولُ اللَّهُ اللَّهُ الْمُعْمَلُ اللَّهُ الْمُعْمَلُ اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلِى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُولُولُ الْمُعْلِى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى الْمُعْلِى الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلِى الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلِى الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ اللْهُ الْمُعْلِى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَى اللَّهُ الْمُعْلَ

(الشهيد لا يجد ألم القتل إلا كما يجد أحدكم ألم مس القرصة) ابن ماجه

Pain Suppression
("Analgesia")
System
in the Brain
and Spinal Cord

Ascending Pain Pathway

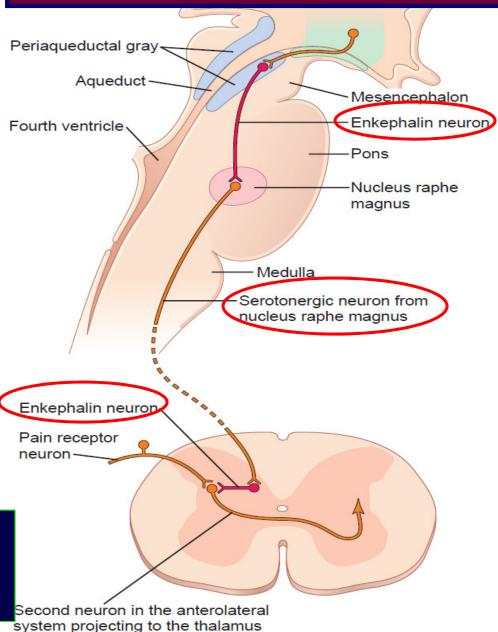

Descending Analgesic Pathway

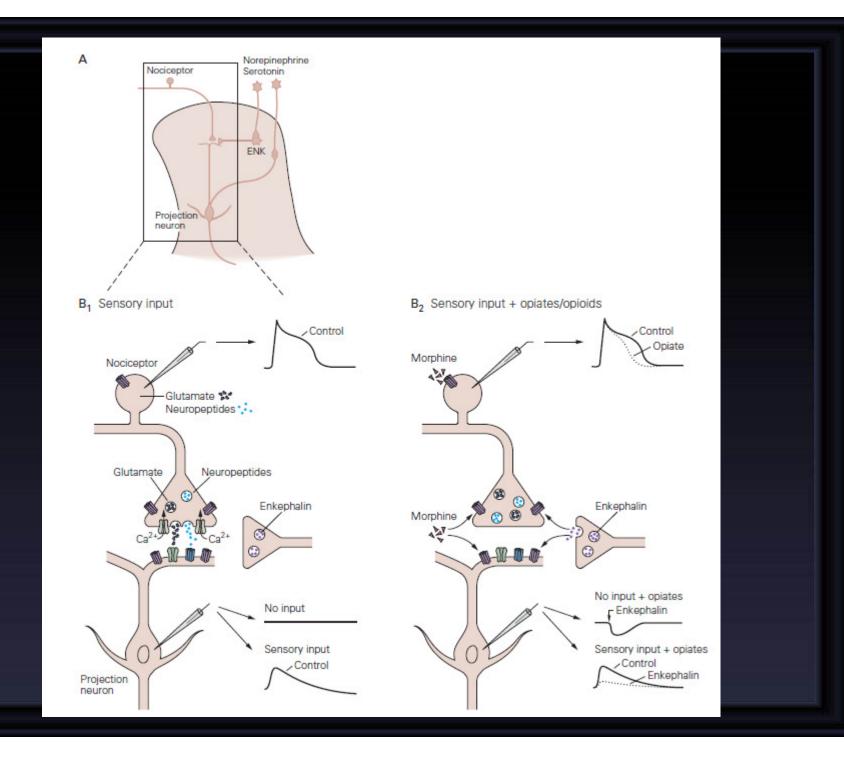

- (1) Enkephalin Neurons from periaqueductal gray and periventricular areas of the mesencephalon and upper pons send signals to
- (2) Raphe magnus nucleus, in the lower pons and upper medulla From these nuclei, second-order N go down the dorsolateral columns in the spinal cord & secrete Serotonin which act on local neurons to secrete Enkephalin
- (3) a pain inhibitory complex in the dorsal of spinal cord

At this point, the analgesia signals can block the pain before it is relayed to the brain.

## Pain Suppression ("Analgesia") System in the Brain and Spinal Cord

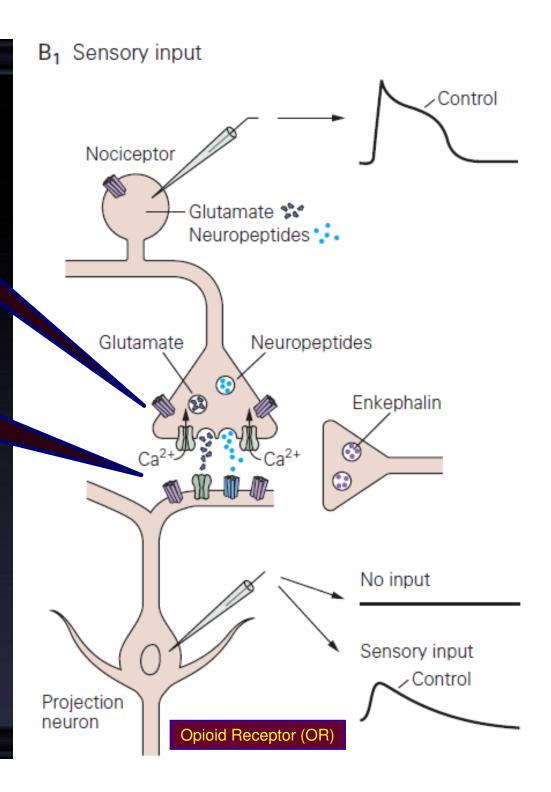

Activation of the presynaptic OR leads to a decrease in Ca<sup>++</sup> influx, resulting in a decrease in release of glutamate and substance P.

Activation of the postsynaptic OR hyperpolarizes the dorsal horn interneuron by causing an increase in K<sup>+</sup> conductance.

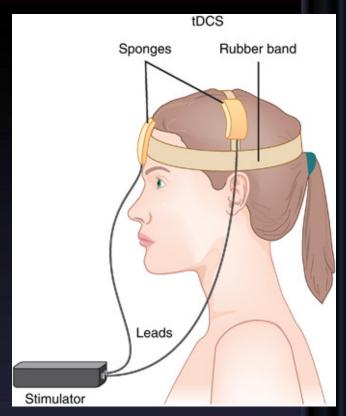

- duration of the EPSP in the dorsal horn neuron.
- Activation of OR on dorsal root ganglia cell bodies also contributes to reduced transmission from nociceptive afferents.

B<sub>2</sub> Sensory input + opiates/opioids Control Opiate Morphine Enkephalin Morphine 3 No input + opiates Enkephalin Sensory input + opiates Control Enkephalin

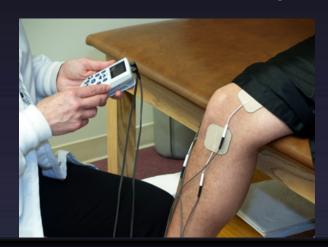

# TRANSCRANIAL DIRECT CURRENT STIMULATION (TDCS)

- It is a non-invasive procedure in which a device sends a small Direct Current (DC) across electrodes in the areas of interest on the scalp to modulate brain function.
- This current flow can increases or decreases the neuronal excitability in the specific area being stimulated, based on which type of stimulation.
- When the current passes from the anode to the cathode, it may increase the activity of the brain at the anode site and decrease the activity of the brain near the cathode site.

# TRANSCUTANEOUS ELECTRICAL NERVE STIMULATION (TENS)

- The gate-control mechanism of pain modulation and serves as the rationale behind the use of transcutaneous electrical nerve stimulation (TENS) for pain relief.
- TENS uses electrodes to activate Aα and Aβ fibers in the vicinity of the injury.

# Inhibition of Pain Transmission by Tactile Sensory Signals

- Stimulation of large type Aβ sensory fibers from peripheral tactile receptors depress transmission of pain signals from the same body area by lateral inhibition in the spinal cord
- The simultaneous physical and psychogenic excitation of the central analgesia system is the basis of pain relief by <u>ACUPUNCTURE</u>.

## **CHARACTERSITICS OF VISCERAL PAIN**

- Poorly localized
- Associated with nausea and autonomic disturbance
- Often referred
- Cutting, crushing are not painful when applied to viscera
- Pain is caused by distension, ischemia and inflammation

Pain - Aδ and fibers
Travel with autonomic
afferent

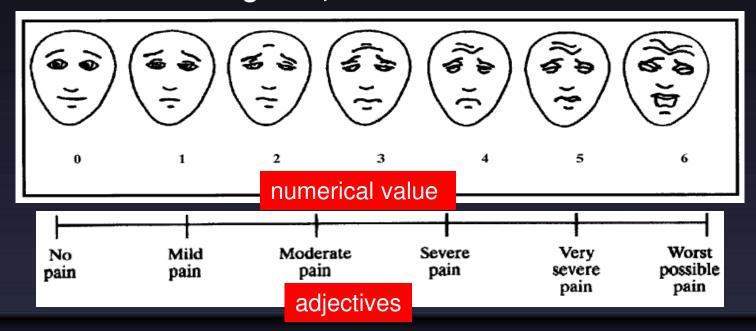

Spinal cord (Dorsal Horn) Lat. spinothalamic tract

**Thalamus** 

**Somatosensory Cortex** 

## PAIN SCALES

- Visual Analog Scale
- Locate area of pain on a picture
- McGill pain questionnaire
  - Evaluate sensory, evaluative, & affective components of pain
    - 20 subcategories, 78 words

#### Part 2. What Does Your Pain Feel Like?

Some of the words below describe your <u>present pain</u>. Circle ONLY those words that best describe it. Leave out any category that is not suitable. Use only a single word in each appropriate category—the one that applies best.

		3	4
1	2	_	
Flickering	Jumping	Pricking	Sharp
Quivering	Flashing	Boring	Cutting
Pulsing	Shooting	Driiling	Lacerating
Throbbing		Stabbing	
Beating		Lancinating

	9		_

# Please mark, on the drawings below, the areas where you feel pain. Put E if external, or I if internal, near the areas which you mark. Put EI if both external and internal.

Part 3.	How Does	Your Pain	<u>Change</u>	<u>With</u>	Time?
			_		

1. Which word or words would you use to describe the pattern of your pain?

Continuous Rhythic Steady Period Constant Interm

Rhythmic Periodic Intermittent 3 Brief Momentary Transient

- 2. What kind of things relieve your pain?
- 3. What kind of things increase your pain?

#### Part 4. How Strong Is Your Pain?

People agree that the following 5 word represent pain in increasing intensity. They are:

1 2 Mild Discomforting 3 Distressing 4 Horrible 5 Excruciating

To answer each question below, write the number of the most appropriate word in the space beside the question.

- 1. Which word describes your pain right now?
- 2. Which word describes it at its worst?
- 3. Which word describes it when it is least?
- 4. Which word describes the worst toothache you ever had?
- 5. Which word describes the worst headache you ever had?
- 6. Which word describes the worst stomach-ache you ever had?

## **Applied**

## 1. What will happen if sensory area SI is removed?

Ans. persons ability to interpret the quality of pain & precise location of pain will be affected.

# 2. Why patient with chronic pain syndrome have difficulty in sleeping?

Ans. Paleospinothalamic pathway sends information to reticular formation and thalamic nuclei which are part of brain activating / alerting system, therefore chronic pain syndrome causes difficulty in sleep.

## **Placebo Effect**

- Placebo stems from the Latin word for "I shall please"
  - Used to describe pain reduction obtained from a mechanism other than those related to the physiological effects of the tx.
  - Linked to psychological mechanisms
- All Treatments <sup>™</sup> have some degree of placebo effect
  - Most studies involving TM involving the use of a sham TM (ultrasound set at the intensity of 0) and an actual treatment have shown ↓ levels of pain in each group.

## **Congenital Analgesia**

- A well-known case of congenital insensitivity to pain is a girl referred to as 'Miss C' who was a student at McGill university in Montreal in the 1950s.
- She was normal in every way, except that she could not feel pain. When she was a child she had bitten off the tip of her tongue and had suffered third-degree burns by kneeling on a radiator.
- she did not feel any pain when she was given strong electric shocks or when exposed to very hot and very cold water.
   When these stimuli were presented to her she showed no change in heart rate, blood pressure or respiration.
- She died at the age of 29 as a result of her condition, because she damaged her knees, hips and spine.

## Fibromyalgia: Pain Without Injury

- The occurrence of body-wide pain in the absence of tissue damage, as in fibromyalgia, interferes with all aspects of a person's life and undermines their credibility.
- The problem is that normal activities can be exhausting, sleep is disturbed, the ability to concentrate is impaired, gastrointestinal function is often abnormal, persistent headaches are common, and the unrelenting pain that no one can see is often detrimental to their personal and professional lives--as it creates a "credibility gap."

## Phantom limb pain

- Phantom limbs give impression of pressure and pain
- Even if phantom limb is experienced as spatially detached from the body, it is still felt to belong to the patient.
- Paraplegic people experience phantom limbs.
   They can even experience continually cycling legs.
- It is the emotional and motivational systems that cause the phantom limb experience.

Our brain can reorganize if sensory input is cut off at the ventral posterior thalamic nucleus even after that part is amputated

## This acquired tolerance is different from addiction

#### **Opiate Tolerance**

receptor desensitization compensatory adaptations in neuronal circuit learning mechanisms

#### **Physical Dependence**

compensatory adaptations in neuronal circuit

#### **Drug Withdrawal**

removal of opiate unmasks compensatory adaptations

**Drug Addiction** Psychological addiction is extremely rare during treatment of pain

- This acquired tolerance is different from addiction, which refers to a psychological craving.
- Psychological addiction rarely occurs when morphine is used to treat chronic pain, provided the patient does not have a history of drug abuse.

## TERMS FREQUENTLY USED

- Hyperalgesia: Excessive Pain
- Allodynia: Pain caused by any other sensation e.g. touch will cause pain.
- Muscular Pain: Less blood flow in the muscles (ischemia).
- Stress analgesia: Mild degree of pain is not felt if the other part of the body has excessive pain.
- Causalgia: burning pain Both develop after wound or disease has ended. Triggered by a simple stimulus e.g. breeze or vibration.
- Neuralgia sharp pain along a nerve pathway.
- Thalamic Syndrome: Obstruction of the thalmogeniculate branch of the posterior cerebral artery Affects posterior thalamic nuclei Patient suffers from prolonged severe pain
