## **ACUTE LEUKEMIA**

BY:

DR. FATMA AL-QAHTANI CONSULTANT HAEMATOLOGIST HEAD OF HAEMATOLOGY DIVISION DEPARTMENT OF PATHOLOGY

### **ACUTE LEUKEMIA**

- Aggressive malignant hematopoietic disorders
- Accumulation of abnormal blasts (Immature precursors of WBC)
  - in bone marrow and blood leading to:
  - 1- Bone marrow failure (anemia , neutropenia & thrombocytopenia)
  - 2- Organ infiltration (hepatosplenomegy, lymphadenopathy)

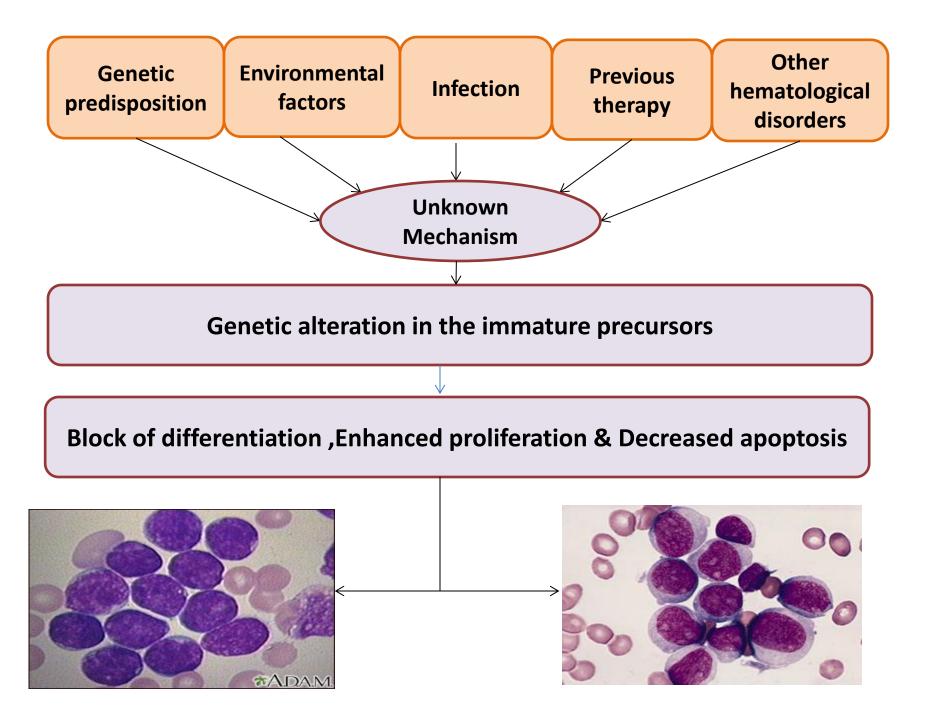

### **HISTORY**

- Means "white blood" in Greek.
- Named by pathologist Virchow in 1845.

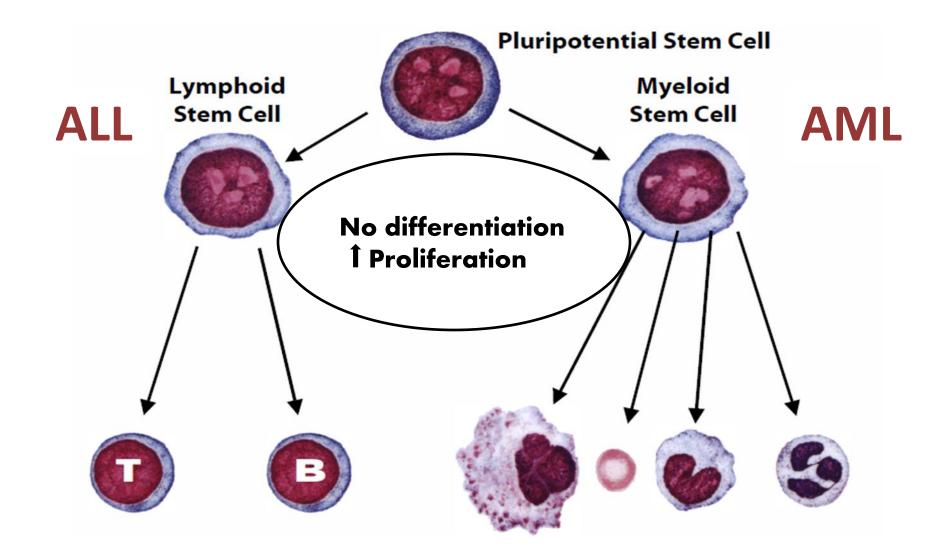

• Classified by FAB classification systems in 1976.

• Reclassified by World Health Organization in 2001 & 2008.

## **PATHOGENESIS**

#### **PATHOGENESIS**

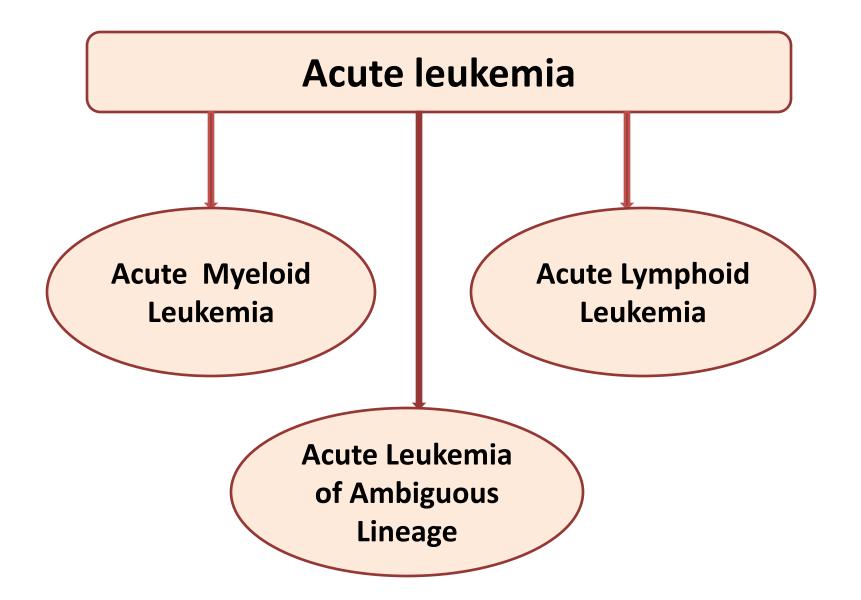

### **EPIDEMIOLOGY**

• AL represent about 8% of neoplastic disease & cause about 4% of malignancy related deaths !

• AML has an incidence of 2 – 3 per 100 000 per year in children, rising to 15 per 100 000 in adults.

•ALL has an incidence of 30 per million & represent about 76% of childhood leukemia .

### **GENERAL CLASSIFICATION**

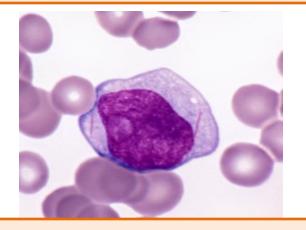

### **BASIS OF CLASSIFICATION**

- 1. Clinical history (Previous therapy)
- 2. Morphology
- 3. Flow cytometry
- 4. Chromosomal Karyotyping
- 5. Molecular study

#### **<u>1- Light microscopy</u>** (blood smear, bone marrow aspirate & biopsy )

- Blast count : it should be >20% out of the total cells
- Blast morphology :

#### **Myeloblast:**

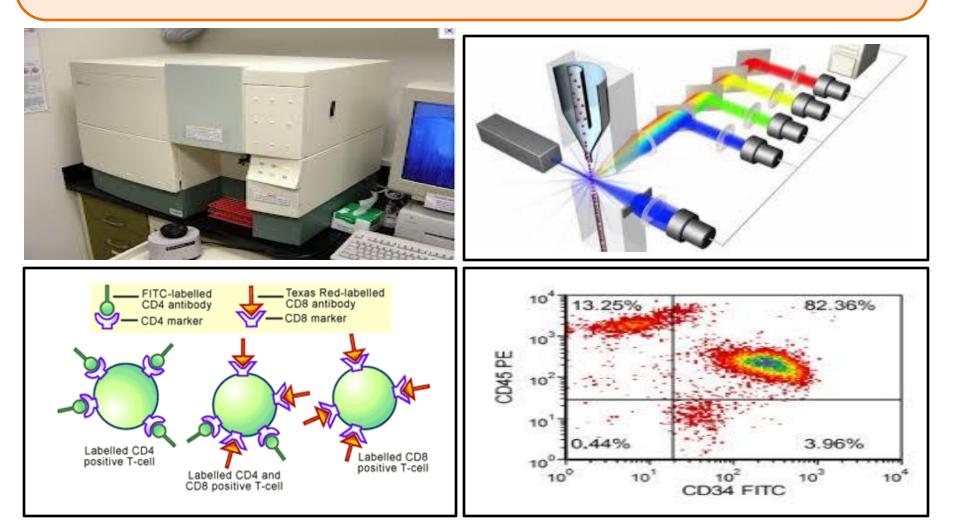

-<u>Size</u>: medium-Large -<u>Nucleous</u>: round, oval or irregular -<u>Nucleolus</u>: prominent -<u>Cytoplasm</u>: abundant, granular <u>Auer rods is characteristic</u>

#### Lymphoblast:

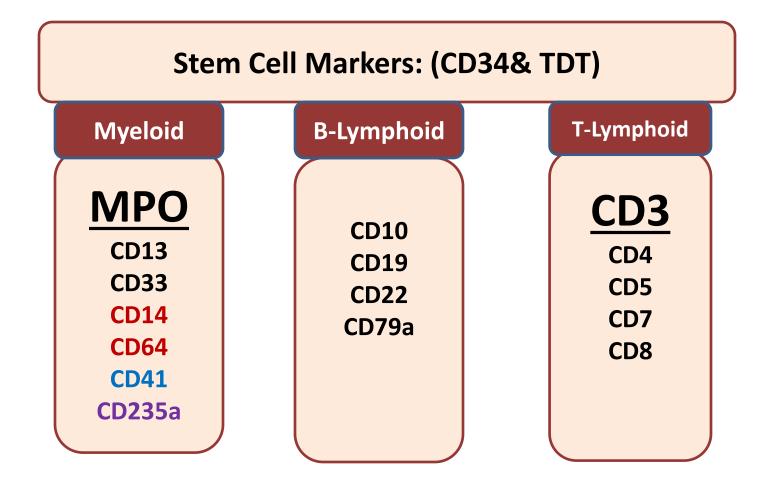

- <u>Size</u>: small- medium
- <u>Nucleous</u>: round
- <u>Nucleolus</u>: not prominent
- <u>Cytoplasm</u>: scanty ,agranular may be vacuolated

#### **2-Flow cytometry:**

Laser based technology allows for cells counting & detection of their surface & cytoplasmic markers by suspending them in a stream of fluid followed by analysis through electronic system.

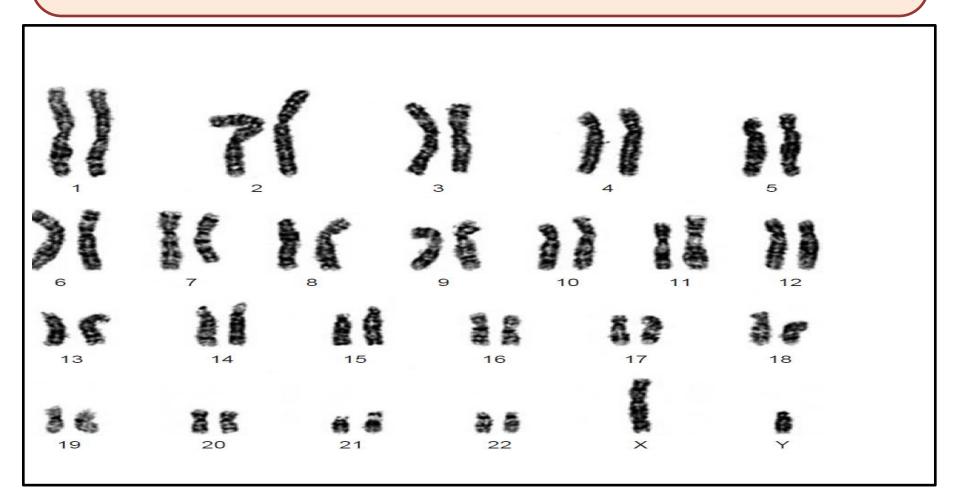

### **BASIS OF CLASSIFICATION**

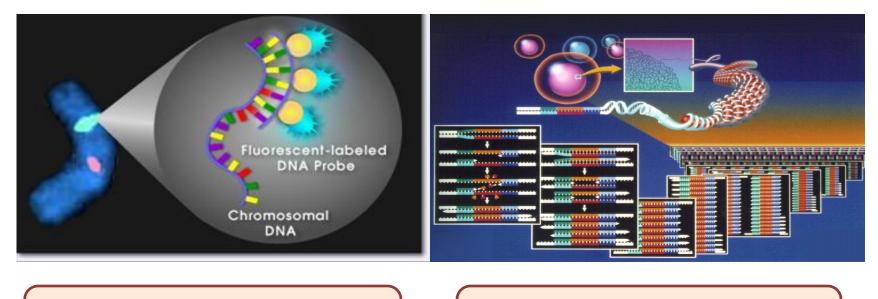

#### **3-Chromosomal Karyotype**

Set of the chromosomes from one cell during metaphase to study the numerical(deletion &trisomy) and structural (translation &inversion) abnormality

#### 4- Molecular studies:

Several techniques used to detect and localize the presence or absence of specific DNA sequences on chromosomes

#### Fluorescent In-Situ Hybridization (FISH)

Polymerase Chain Reaction (PCR)

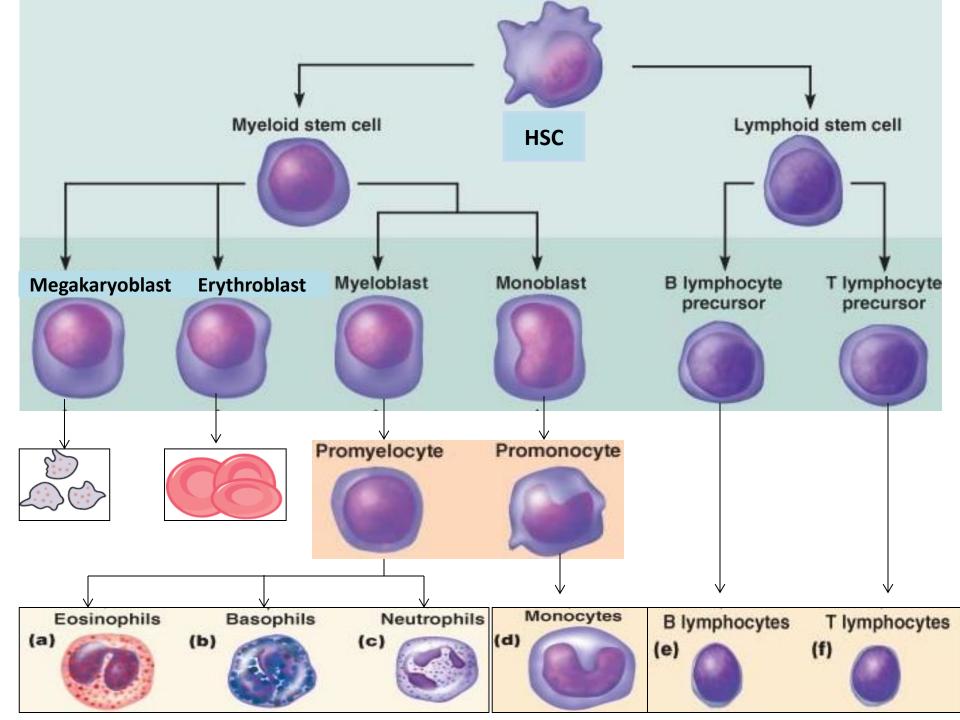

#### **RECURRENT GENETIC ABNORMALITIES**

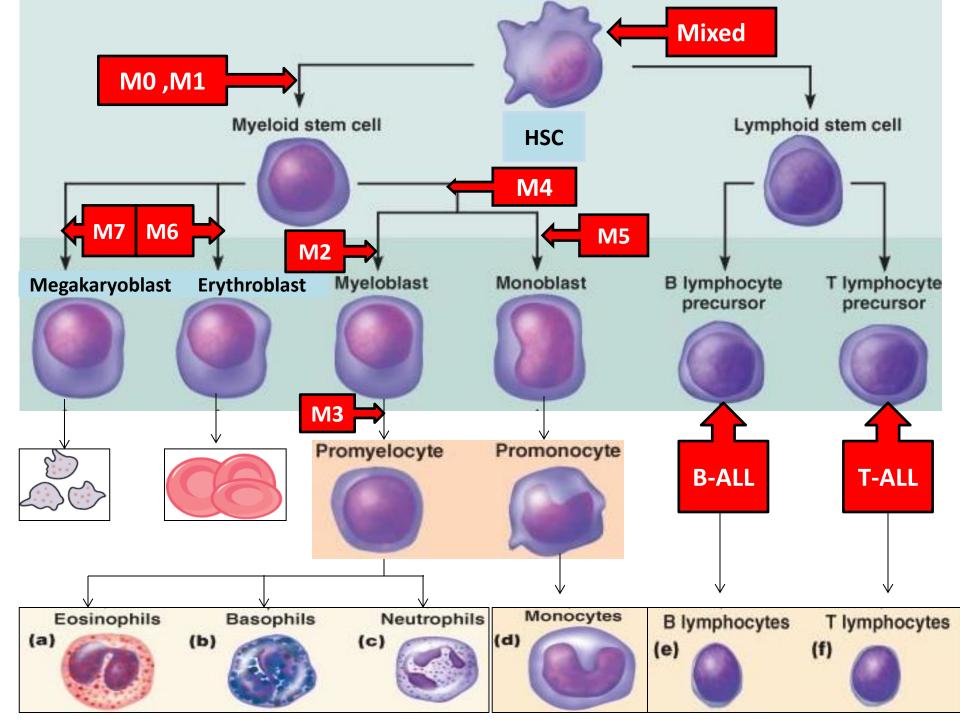

AML		ALL	
Karyotype	Molecular	Karyotype	Molecular
t (8;21)	AML1-ETO	t (9;22)	BCR-ABL1
t (16;16) or inv(16)	CBFB-MYH11	t (4;11)	AF4-MLL
t (15;17)	PML-RARA	t (12;21)	ETV6-RUNX1
t (9;11)	MLLT1-MLL	t (5;14)	IL3-IGH

# ACUTE MYELOID LEUKEMIA (AML)

### ACUTE MYELOID LEUKEMIA (AML)

- Group of hematopoietic neoplasms caused by proliferation of malignant myeloid blasts in bone marrow and blood.
- The blast ≥20% or t(8;21) t (16;16) or t(15;17).
- More in Adults (do occur in infants!)
- Worse than ALL

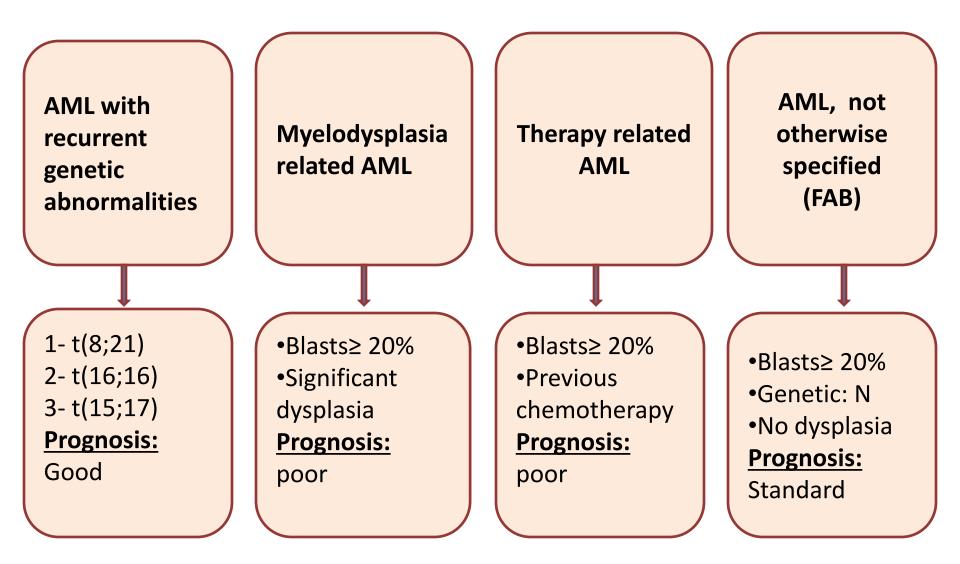

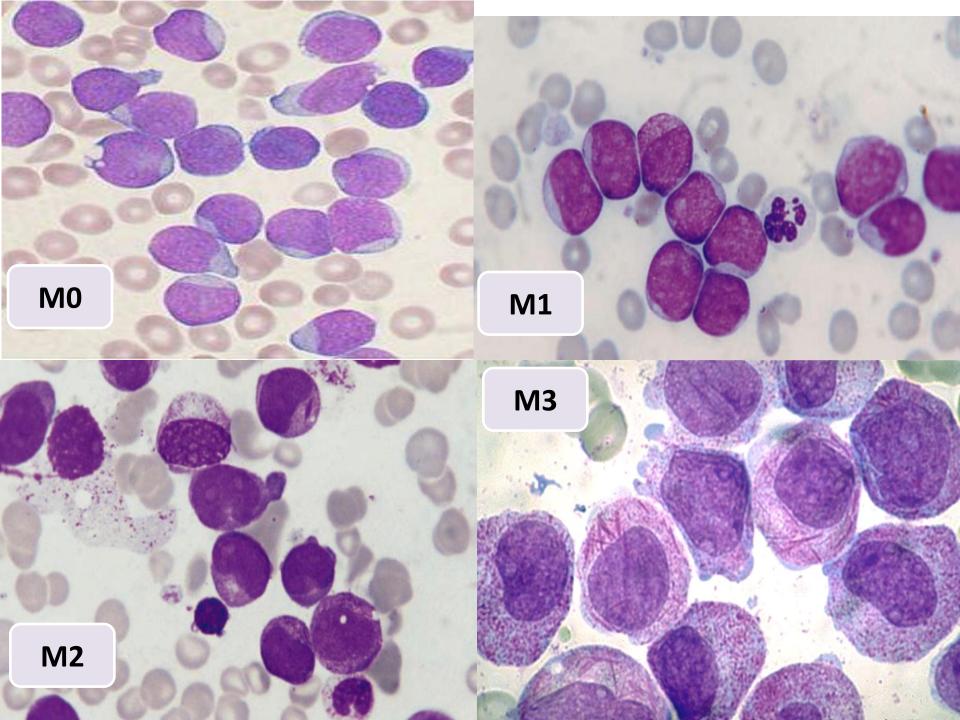

### **FAB CLASSIFICATION**

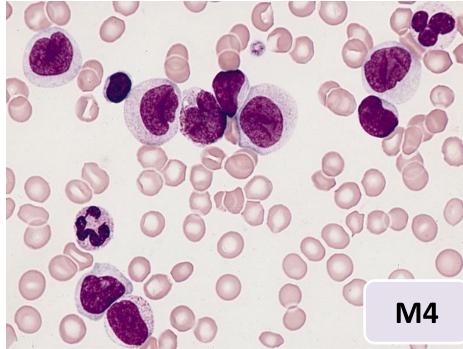

#### Based on morphology& flow cytometry

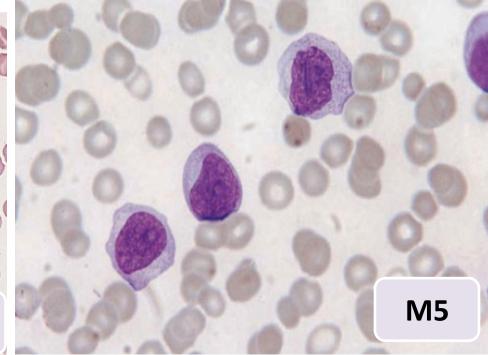

Subtype	Features	Genetics in WHO	Notes
Мо	<b>Minimal differentiation</b>		
M1	Without maturation		
M2	With maturation	t(8;21)	
M3	Promyelocytic	t(15;17)	DIC
M4	Granulocytic and monocytic	t or inv(16;16)	Gum
M5	Monoblastic (M5a) Monocytic (M5b)	t(9;11)	hypertrophy
<b>M</b> 6	Erythroid		CD235a
M7	Megakaryocytic		<b>CD41</b>
M8	Basophilic		

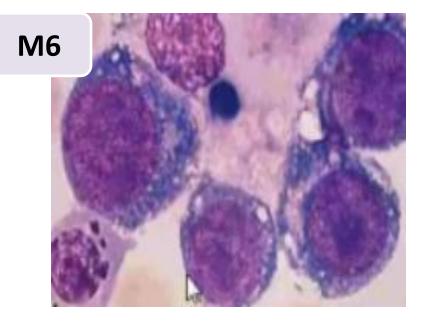

### **AML CLASSIFICATION (WHO)**

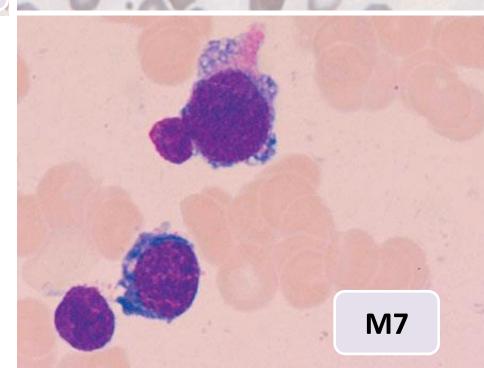

### **CLINICAL FEATURES OF AML**

#### **1-Pancytopenia:**

 $\downarrow$ WBC $\rightarrow$  infection (fever ,septic shock)

 $\downarrow$ Hb  $\rightarrow$ anemia (fatigue , headache , pallor ,SOB....)

 $\downarrow$ platelets  $\rightarrow$ bleeding (bruises , epistaxis ,menorrhagia...)

Acute onset

#### **2-Organ infiltration:**

- •Hepatosplenomegally.
- Lymphadenopathy (rare)
- •Myeloid sarcoma
- •Gum hypertrophy
- •CNS disease

More with Acute Monoblastic Leukemia

### **CLINICAL FEATURES OF AML**

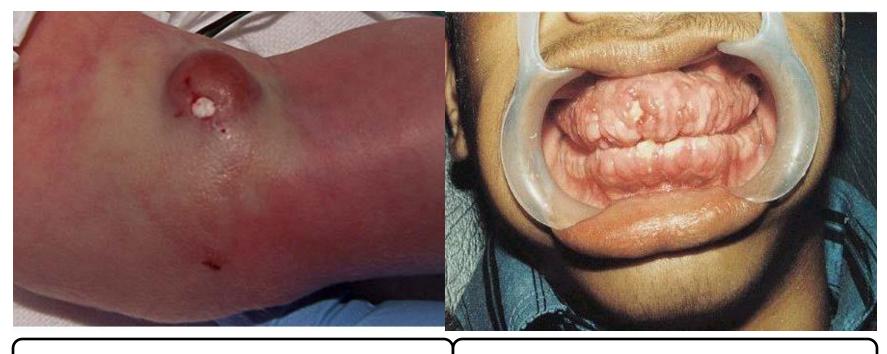

#### **3-Leucostasis (increased blood viscosity)**

#### **4-Disseminated Intravascular Coagulation (DIC):**

Widespread activation of coagulation system leading to intravascular fibrin deposition & consumption of platelet and coagulation factors which can be manifested as bleeding (85%) or thrombosis (15%)

More with Acute Promyelocytic leukemia (M3)

### **CLINICAL FEATURES OF AML**

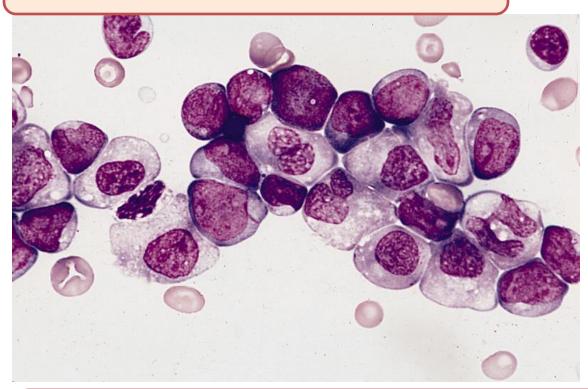

**Myeloid sarcoma** 

**Gum hypertrophy** 

### **CASE STUDY**

- 65 years old male presented to ER with fatigue ,fever and nose bleeding for 2 weeks.
- O/E : moderate hepatosplenomegaly & multiple bruises.
- CBC : WBC :40 x10<sup>9</sup>/L HB: 7g/dL PLT: 51 x10<sup>9</sup>/L

#### **Blood smear & bone marrow:**

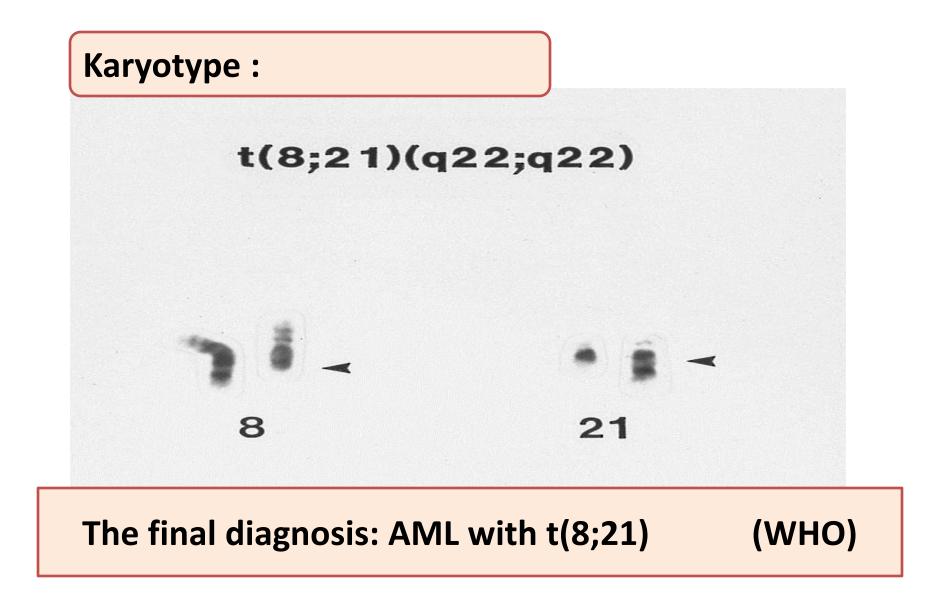

#### Flow cytometry :

The blast are positive for CD34 ,CD13,CD33,CD117 and MPO They are negative for CD3,CD10,CD19&CD79a

#### AML with maturation (M2) (FAB)

### **PROGNOSIS AND TREATMENT**

#### **Better prognosis:**

- Genetics: t(8;21), inv(16;16) or t(15;17)
- Age: < 60 years
- Primary better than secondary

#### **Treatment**

- Chemotherapy:
  - > AML: M0-M8 but not M3 (same protocol)
  - > AML: M3 (ATRA or arsenic)
- Stem cell transplantation

## ACUTE LYMPHOBLASTIC LEUKEMIA (ALL)

#### **ACUTE LYMPHOBLASTIC LEUKEMIA (ALL)**

 Acute leukemia characterized by proliferation of malignant lymphoid blasts in bone marrow and blood.
B and T cells
More common in Children

Better than AML

### **CLINICAL FEATURES OF ALL**

#### <u>1-Pancytopenia:</u>

 $\downarrow$ WBC $\rightarrow$  infection (fever ,septic shock)

 $\downarrow$ Hb  $\rightarrow$ anemia (fatigue , headache , pallor ,SOB....)

 $\downarrow$ platelets  $\rightarrow$ bleeding (bruises , epistaxis ,menorrhagia...)

Acute onset

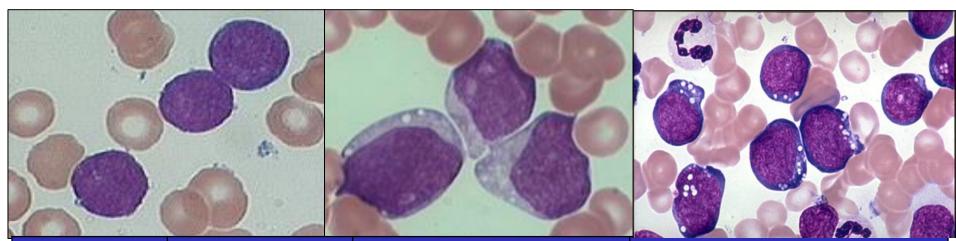

#### **2-Organ infiltration:**

- Lymphadenopathy (very common)
- •Hepatosplenomegally.
- testicles involvement
- •CNS disease

Mediastinal mass

Characteristic for T-ALL

#### **MORPHOLOGICAL SUBTYPES (FAB)**

	L1	L2	L3 Burkitt's
Morpholog y	Homogenous	Heterogeneous	Homogenous
Size	Small	Variable	Small
Cytoplasm	Little	More	Vaculated
Nucleoli	Not prominent	Prominent	Prominent
Genetics	Variable	Variable	t(8;14) cmyc

#### **IMMUNOPHENOTYPIC SUBTYPES (WHO)**

	B cell	T cell
Markers	CD19,CD10,CD79a	CD3
Percentage	80%	20%
Age	Younger	Older
Clinical		Mediastinal mass CNS relapse
WBC count	Less	Higher
Prognosis	Better	Worse
Genetics	t(9;22),t(4;11),t(12;21)	

L3 (Burkitt's) represents <u>mature</u> lymphoid neoplasm so it is a type of lymphoma not Acute <u>lymphoblastic</u> leukaemia

Precursor	T- cell	Mature T- cell	
cC	D3	sCD3	
- VE (CD4&CD8)	+VE (CD4&CD8)	CD4 only CD8 only	
	CD2,CD5&CD7		
T-ALL		T- Cell Lymphoma	

### **PROGNOSIS AND TREATMENT**

	Better	Worse
Age	2 - 10 yrs	<2 - >10 yrs
Gender	F	Μ
WBC count	Low	High
Cell type	B cell	T cell
B-ALL phenotype	Common	Others
B-ALL genetics	Hyperdiploidy t(12;21)	Hypodiploidy t(9;22)
CNS involvement	Νο	Yes

#### Treatment:

- Chemotherapy (high cure rate)
- Stem cell transplantation

### **REMEMBER**!

- Acute leukaemia is a fatal neoplastic condition
- > 20% or more blasts = Acute leukaemia
- Diagnosis requires special investigations
- Auer rods = AML
- AML M3 = DIC & target therapy
- $\succ$  Gum hypertrophy = mostly M4 or M5,
- Mediastinal = T-ALL

### **REMEMBER**!

Subtypes of AML (M0-M8) + cytogenetic abnormalities

- Subtypes of ALL (T or B cell)
- Main lineages markers are MPO, CD19 and CD3
- Stem cell markers are CD34,TDT
- FAB classification based mainly on morphology
- WHO classification focused more on genetics
