

مَسْئَلَةُ الْوَلَدِ الْمَرْغُوبِ

ANATOMY OF THE FEMALE REPRODUCTIVE SYSTEM

Mona Ahmed El-Safadi

E-mail:

melsafadi@ksu.edu.sa

mona@safadi.com

OBJECTIVES

At the end of the lecture, students should:

- *List the organs of female reproductive system.*
- *Describe the pelvic peritoneum in female.*
- *Describe the position and relations of the **ovaries**.*
- *List the parts of the **uterine tube**.*
- *Describe the anatomy of **uterus** regarding: subdivisions, cavity, relations, ligaments & main support.*
- *Describe the anatomy of **vagina** regarding: structure, extent, length & relations.*
- *Describe the **supply (arteries, veins, lymph, nerves)** of female reproductive system.*

FEMALE REPRODUCTIVE SYSTEM

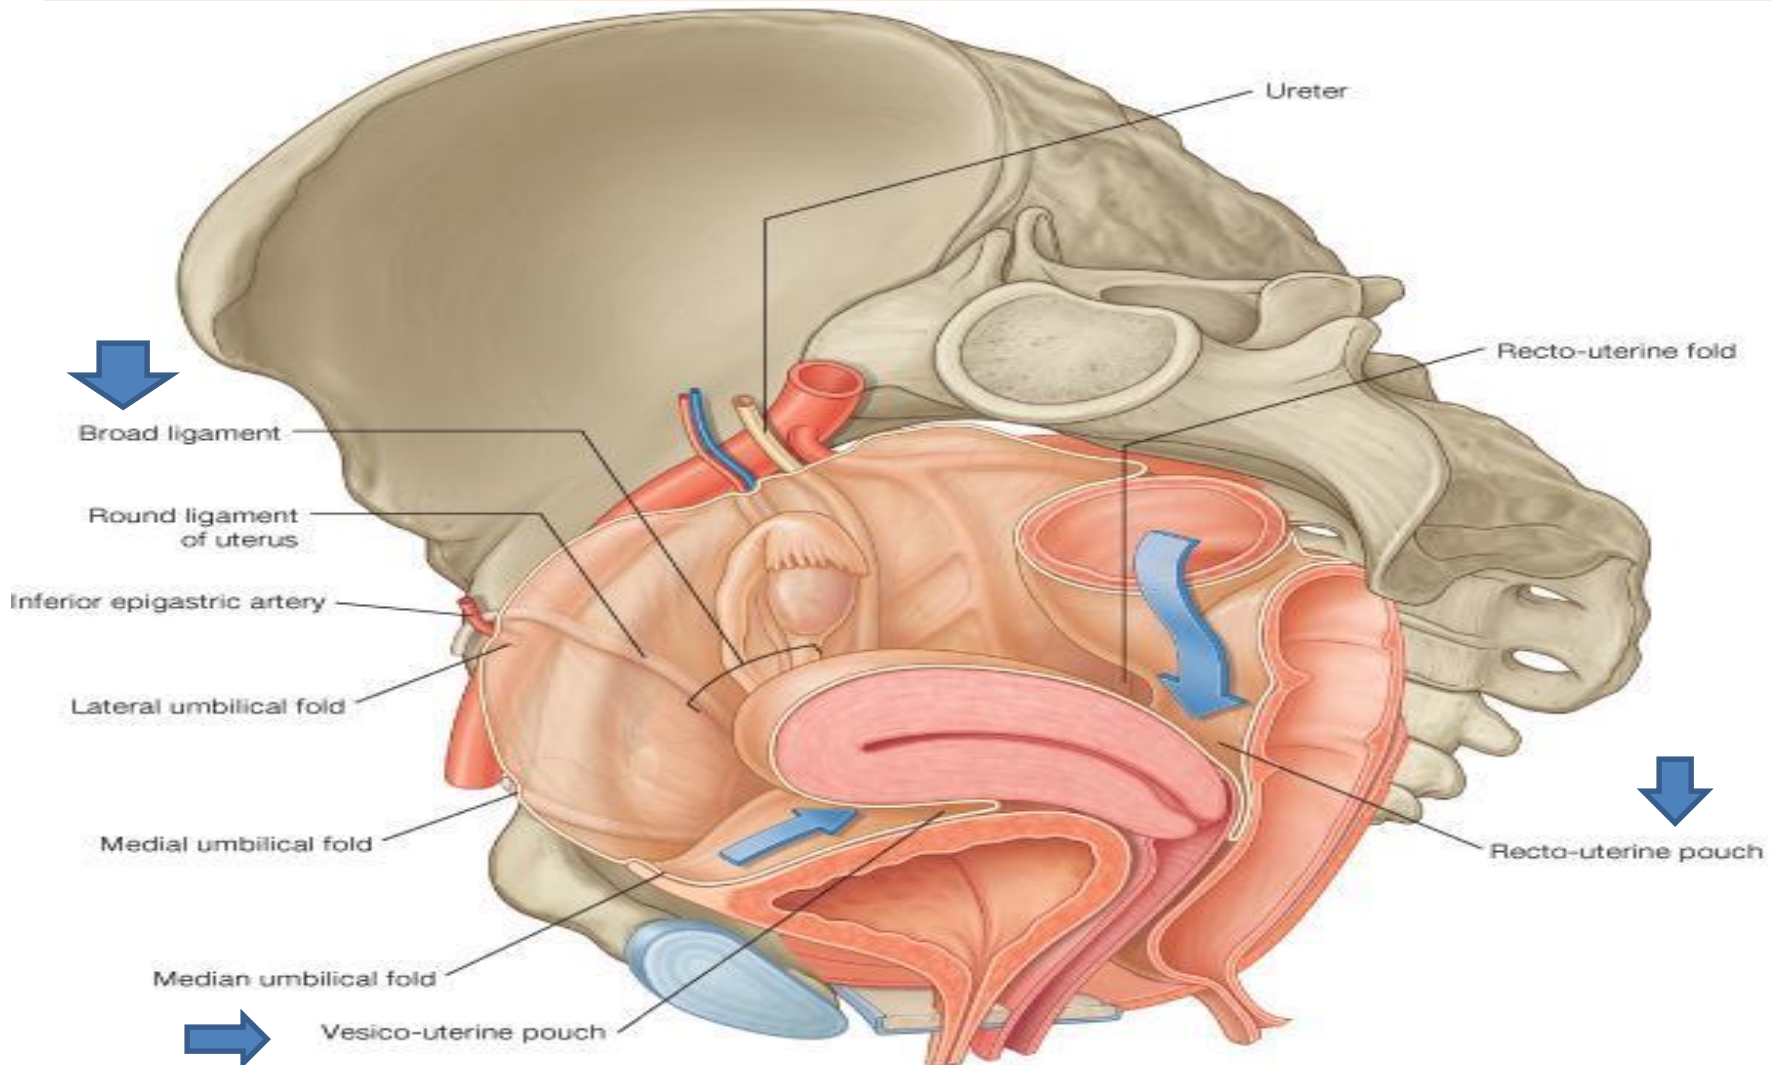

PELVIC PERITONEUM IN FEMALE

- ❑ **Rectouterine (Douglas) pouch:** Reflection of peritoneum from rectum to upper part of posterior surface of vagina
- ❑ **Uterovesical (vesicouterine) pouch:** Reflection of peritoneum from uterus to upper surface of urinary bladder
- ❑ **Broad ligament of uterus:** Extension of peritoneum from lateral wall of uterus to lateral wall of pelvis, encloses the uterine tubes

PELVIC PERITONEUM IN FEMALE

THE OVARIES

□ It is an almond-shaped organ.

□ It is attached to the back of the broad ligament by a peritoneal fold (mesovarium)

□ Its medial end is attached to uterus by **ligament of ovary**.

□ Its lateral end is related to the **fimbriae of the uterine tube**.

THE UTERINE (FALLOPIAN) TUBES

- It is 10 cm long.
- It is enclosed in the broad ligament of uterus.
- It is divided into:

1) Intramural part: opening into the uterine wall

2) Isthmus: narrowest part

3) Ampulla: widest part (site of fertilization)

4) Infundibulum: funnel-shaped end, has finger-like processes (fimbriae), related to ovary

FUNCTION OF:

❑ OVARIES: PRIMARY SEX ORGANS IN FEMALE

- 1) Production of female germ cells
- 2) Secretion of female sex hormones

❑ UTERINE TUBES:

- 1) Site of fertilization
- 2) Transport of fertilized ovum into the uterus

THE UTERUS

□ A hollow, pear-shaped muscular organ

□ Divided into:

1. **Fundus:** no cavity

2. **Body:** cavity is triangular

3. **Cervix:** cavity is fusiform, divided into:

*Supravaginal part

*Vaginal part

THE UTERUS

□ **FUNDUS:** The part of uterus above the level of uterine tubes

□ **BODY:** The part of uterus from the level of uterine tube to the level of the isthmus of uterus

□ **CERVIX:** The part of the uterus below the level of the isthmus of the uterus

THE CERVICAL CANAL

- ❑ **INTERNAL OS:** opening between cavity of body of uterus & cavity of cervix (cervical canal)
- ❑ **EXTERNAL OS:** opening between cervical canal & cavity of vagina
- ❑ **In a nulliparous woman:** external os appears circular.
- ❑ **In a multiparous woman:** external os appears as a transverse slit with an anterior & a posterior lip.

RELATIONS OF UTERUS

❑ **FUNDUS + BODY + SUPRAVAGINAL PART OF CERVIX:**

1. **Anterior:** superior surface of urinary bladder
2. **Posterior:** sigmoid colon
3. **Lateral:** uterine artery

❑ **VAGINAL PART OF CERVIX:** surrounded by vaginal fornices

1. **Anterior:** anterior fornix of vagina
2. **Posterior:** posterior fornix of vagina
3. **Lateral:** lateral fornices of vagina

FUNCTION OF UTERUS

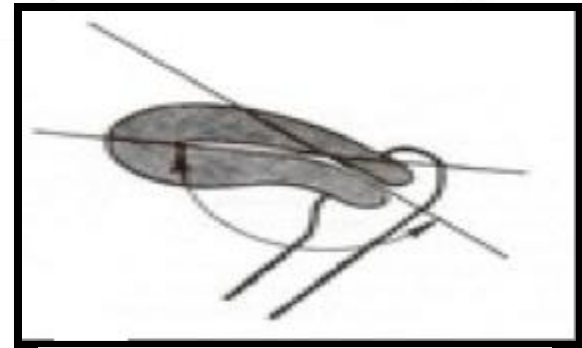

POSITIONS OF UTERUS

ANTEVERTED UTERUS

Long axis of whole uterus is bent forward on long axis of vagina

ANTEFLEXED UTERUS

Long axis of body of uterus is bent forward on long axis of cervix

POSITIONS OF UTERUS

RETROVERTED UTERUS

Fundus & body of uterus are bent backward on the vagina and lie in rectouterine pouch

RETROFLEXED UTERUS

Long axis of body of uterus is bent backward on long axis of cervix

USUAL POSITION OF UTERUS

ANTEVERTED ANTEFLEXED UTERUS

LIGAMENTS OF UTERUS

1) Ligaments at junction between fundus & body of uterus (At the level of uterine tube)

LIGAMENTS OF UTERUS

2) Ligaments of cervix

Extend from cervix to: anterior (**pubocervical**),
lateral (**transverse cervical or cardinal**)
posterior (**uterosacral or sacrocervical**)
pelvic walls

LEVATOR ANI MUSCLES

- ❑ FORM THE PELVIC FLOOR: separate pelvis from perineum
- ❑ FORM PELVIC DIAPHRAGM: traversed by urethra, vagina & rectum
- ❑ SUPPORT PELVIC ORGANS

SUPPORT OF UTERUS

- ❑ Round ligament of uterus (maintains anteverted anteflexed position)
- ❑ Ligaments of cervix (especially transverse cervical)
- ❑ Levator ani muscles

UTERINE PROLAPSE

- ❑ Downward displacement of uterus due to damage of:
 1. Ligaments of uterus
 2. Levator ani muscles

VAGINA

❑ **STRUCTURE:** Fibro-muscular tube

❑ **EXTENT:** From external os, along pelvis & perineum, to open in the vulva (female external genitalia), behind urethral opening

❑ **LENGTH:** Its anterior wall (7.5 cm) is shorter than its posterior wall (9 cm)

❑ **FUNCTION:** 1) Copulatory organ & 2) Birth canal

RELATIONS OF VAGINA

- ❑ **ANTERIOR:** Urinary bladder (in pelvis) & urethra (in perineum)
- ❑ **POSTERIOR:** Rectum (in pelvis) & anal canal (in perineum)
- ❑ **LATERAL:** ureters (in pelvis)

ARTERIAL SUPPLY

From abdominal aorta

ORGAN	ARTERIES	VEINS	LYMPHATICS	NERVES (AUTONOMIC)
OVARIES	OVARIAN (ABDOMINAL AORTA)	OVARIAN (TO INFERIOR VENA CAVA & LEFT RENAL VEIN)	TO PARAAORTIC LYMPH NODES (IN ABDOMEN)	OVARIAN PLEXUS (IN ABDOMEN)
UTERINE TUBES	<ul style="list-style-type: none"> ▪OVARIAN ▪UTERINE 	<ul style="list-style-type: none"> ▪OVARIAN ▪UTERINE 	<ul style="list-style-type: none"> ▪PARAAORTIC ▪INTERNAL ILIAC 	<ul style="list-style-type: none"> ▪OVARIAN ▪INFERIOR HYPOGASTRIC
UTERUS	UTERINE (INTERNAL ILIAC ARTERY IN PELVIS)	UTERINE PLEXUS (TO INTERNAL ILIAC VEIN)	TO INTERNAL ILIAC LYMPH NODES (IN PELVIS)	INFERIOR HYPOGASTRIC PLEXUS (IN PELVIS)
VAGINA	VAGINAL (INTERNAL ILIAC ARTERY IN PELVIS)	VAGINAL PLEXUS (TO INTERNAL ILIAC VEIN)	TO INTERNAL ILIAC LYMPH NODES (IN PELVIS)	INFERIOR HYPOGASTRIC PLEXUS (IN PELVIS)

QUESTION 1

□ Regarding the female reproductive organs, which one of the following statement is correct?

- 1. The ampulla is the most medial part of the uterine tube.**
- 2. The rectum is anterior to the vagina.**
- 3. The ovarian artery is a branch of the internal iliac artery of the pelvis.**
- 4. The uterine tube is enclosed in the broad ligament of the uterus.**

QUESTION 2

□ Which one of the following structures is related (or attached) to the lateral end of the ovary?

- 1. Fimbriae of uterine tube**
- 2. Ampulla of uterine tube**
- 3. Ligament of ovary**
- 4. Round ligament of uterus**

QUESTION 3

Which one of the following structures is anterior to the uterus?

1. Urinary bladder

2. Ureter

3. Sigmoid colon

4. Ovary

Thank you!
