Example of a complete assignment (please do not use the same article in your assignment)

Article title	Cultures for improving patient safety through learning: the role of teamwork*
Journal	Quality in Health Care
Author	J Firth-Cozens
Summary of the article	Well-functioning teams help in protecting and ensuring patients safety. This article discussed this concept by defining good teams and individuals behind it. It also touched on organizational culture that can count as a base for team functioning and the challenges behind that.
How is the article related to what you learnt from Patient Safety course? Limit your answer to 3 minimum points (maximum 5 points)	In this article, several points were stressed out from patient safety course. To be more specific, it was similar to concepts I learnt from "Learning from Errors" class. Here are some examples: 1-It's important to have cultures that normalize errors as errors will be made but we have to be prepared for them 2-It's important to understand that there are individual factors as well as organizational factors that lead to errors. Identifying them is the first step to have a functioning individual and team. 3- Good communication between team members is vital in a well-functioning team
