

# **INTRODUCTION TO ONCOLOGY**

**BY**

**PROFESSOR AHMED ABDELWARITH**

FEB 2013

# Definitions

# Defining Cancer

**Cancer** is a term used for diseases in which abnormal cells divide and escape the body control.

**Depressed immunity**

These cells are able to:

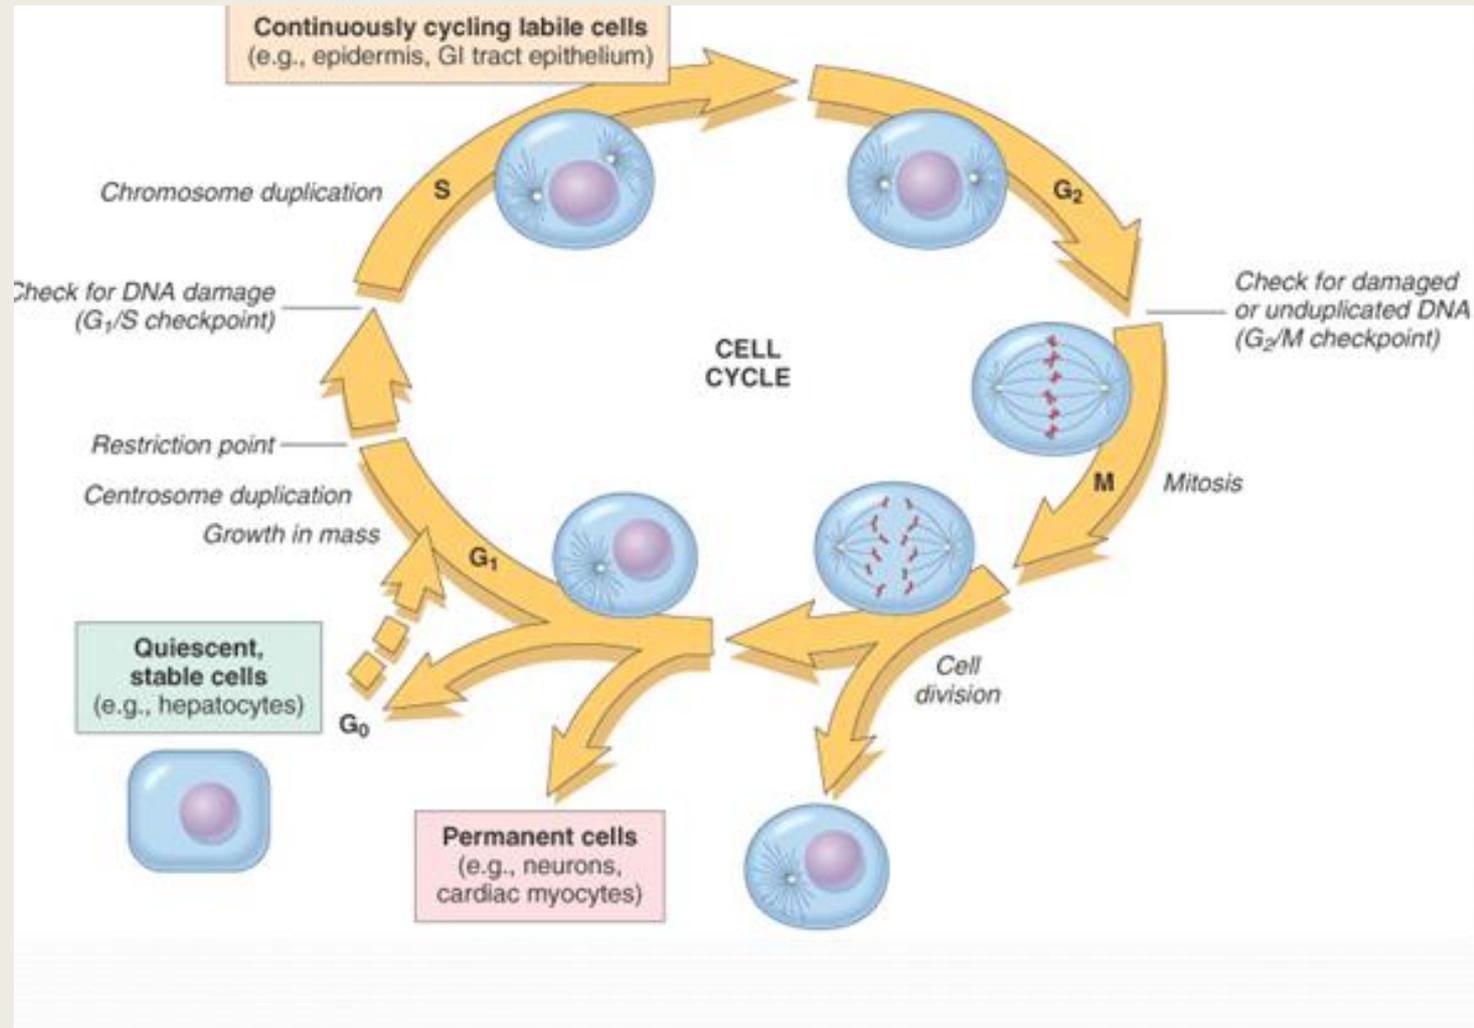

- 1-Invade surrounding tissues
- 2-Send distant metastases.
- 3- Lost their functions

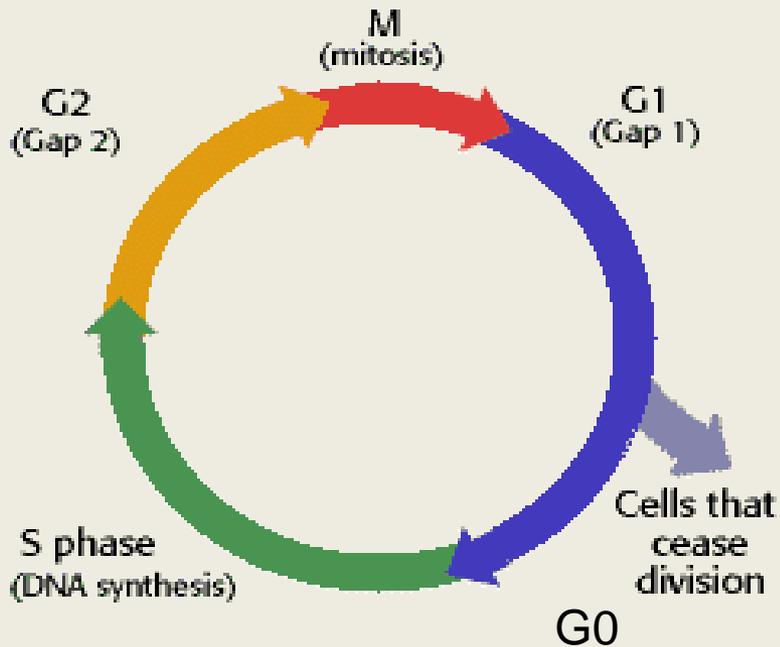

To exclude  
Benign tumors

To exclude  
locally malignant

# The cell cycle

- Labile cells
- Permanent cells
- Stable cells
  
- Stem cells?

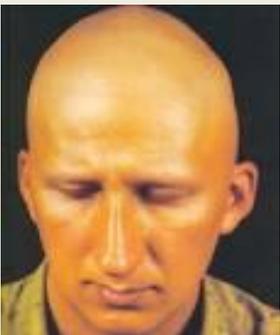

- Constantly dividing cell types include  
1- skin cells, 2- GIT  
3- blood cells in the bone marrow.
- Constantly dividing cells have a **higher risk of becoming malignant and develop cancer**, dividing uncontrollably

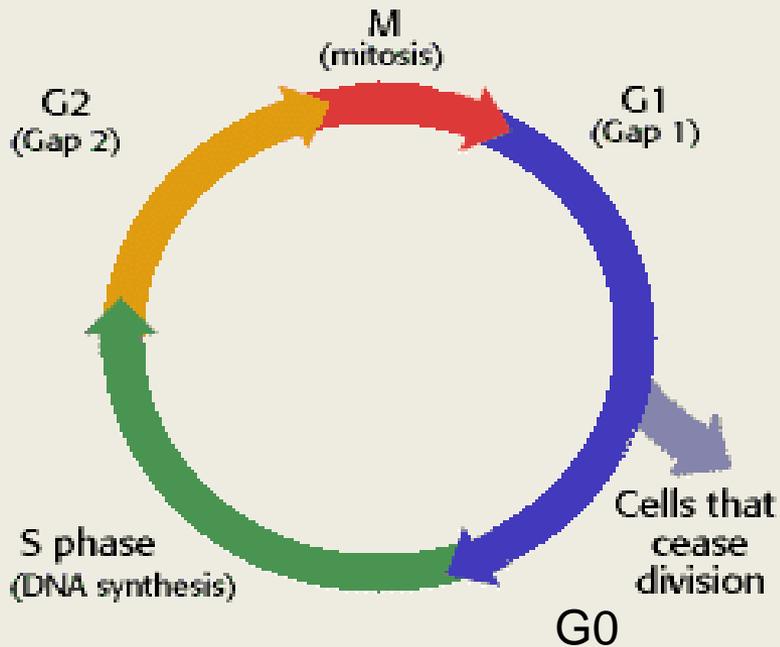

# DIVIDING CELLS IN HUMAN BODY

- cytotoxic drugs, such as used in treatment of cancer, work by inhibiting the proliferation of dividing cells, the malignant cells as the desired target .

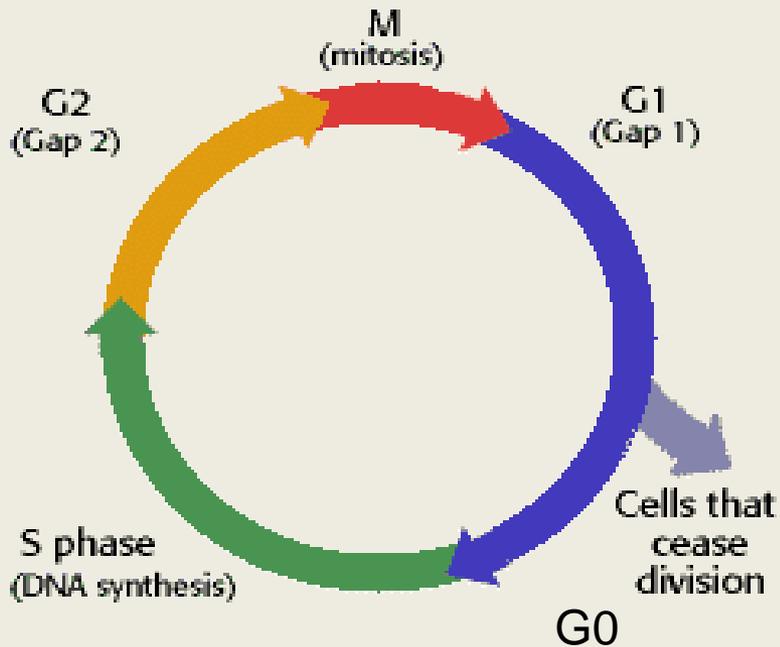

However, this has the adverse effect against the cells normally dividing in the body, and **Hair, skin, GI tract and bone marrow.**

**MYELOSUPPRESSION**

- **Stable cells** : multiply only when needed.
- most of the time in the quiescent G0 phase
- but can be stimulated to enter the cell cycle when needed.
- Examples include: the liver,

- **Permanent cells:**  
do not have a  
division potential

Neurons

Muscle cells

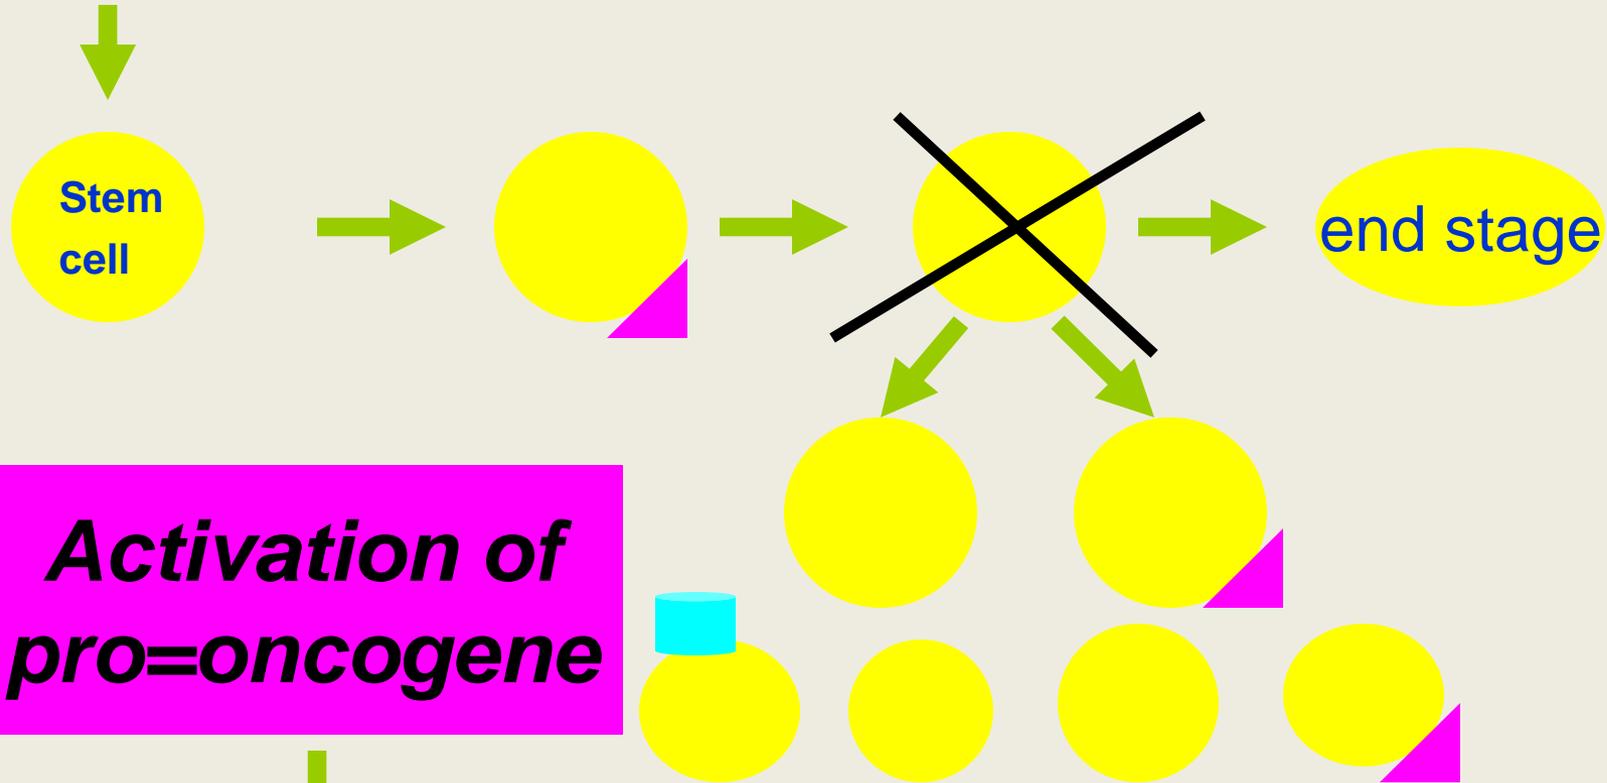

When damaged ( by  
radiotherapy )  
they can not be  
replaced

# What causes cancer?

- Cell division is controlled by the genes which are formed of DNA
- Cancer arises from the **mutation** of a normal gene resulted from DNA defect

Mutated genes that cause cancer are activated pro-oncogene (genes related to cell division) called **oncogenes**.

# Development of Malignant Disease

***Activation of  
pro=oncogene***

***oncogenes***

***Cell Arrest & clonal  
expansion***

# Causes of Cancer

- **DNA Mutations**
  - – Radiation – and other environmental factors (Tobacco, Alcohol, Radon, Asbestos, etc)
  - – Random somatic mutations
  - – Inherited germ line mutations
- **Infectious agents**
  - – **Viral**
    - • HPV – cervical cancer
    - • Hepatitis – liver cancer

# What should you know as an oncologist ?

- 1-When to suspect cancer?
- 2-How to diagnose cancer?
- 3-What the essential work up for staging?
- 4-How to treat cancer?
- 5-What is the prognosis of your patient?

# When to suspect cancer?

## Cancer Signs and Symptoms

-Cancer gives most people no symptoms or signs that exclusively indicate the disease.

-Unfortunately, every complaint or symptom of cancer can be explained by a harmless condition as well.

# 1- When to suspect cancer?

## Cancer Signs and Symptoms

What are the clues???????

-Persistent P

-Progressive P

-Disabling D

# Cancer Signs and Symptoms

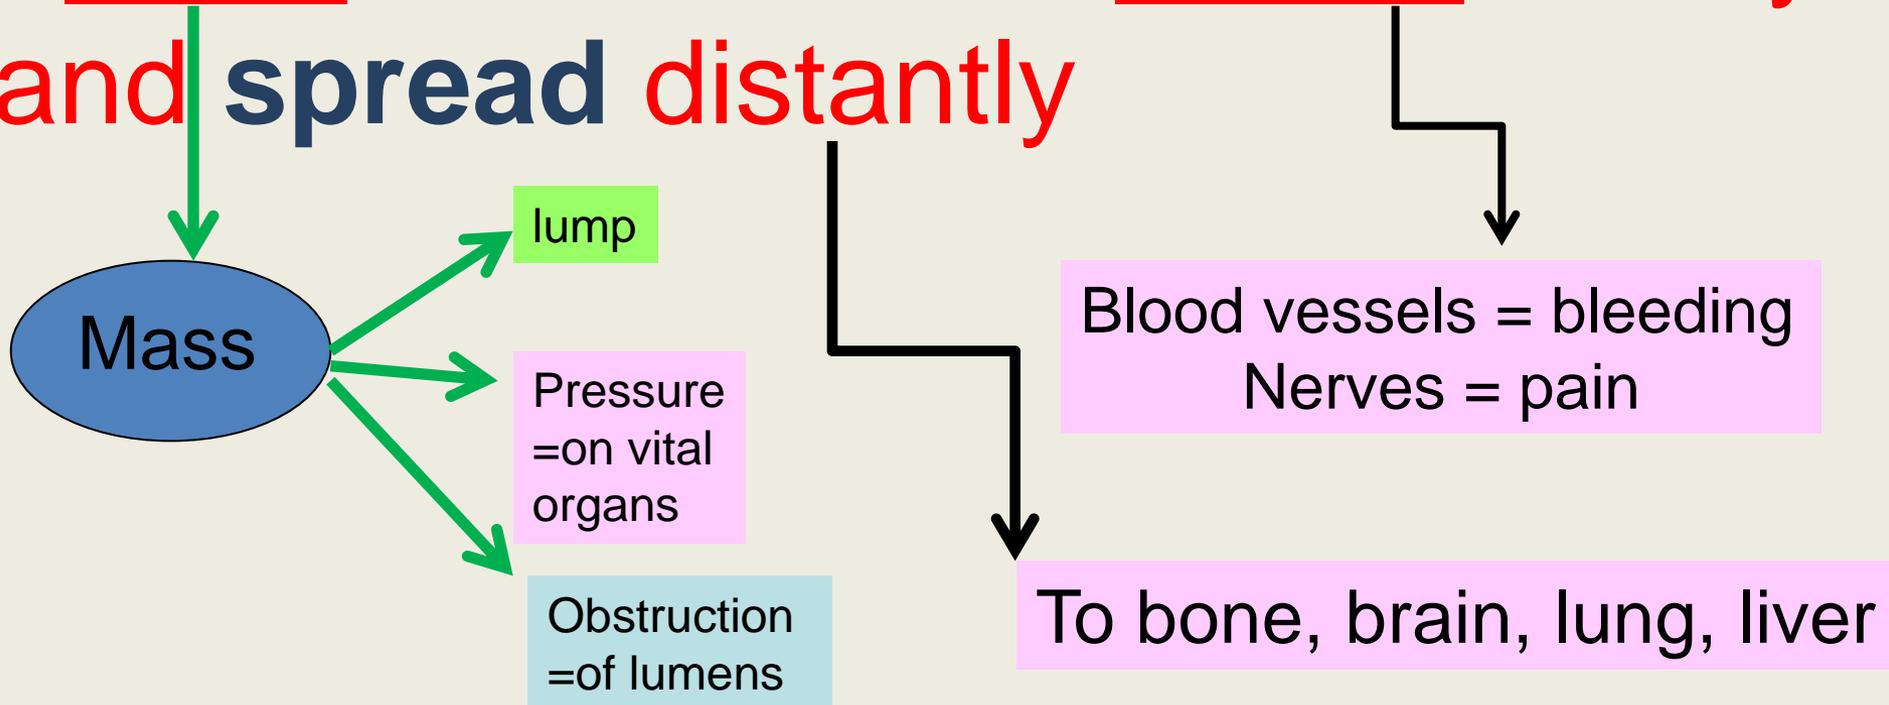

What are the clues???????

- **Symptoms & Signs**

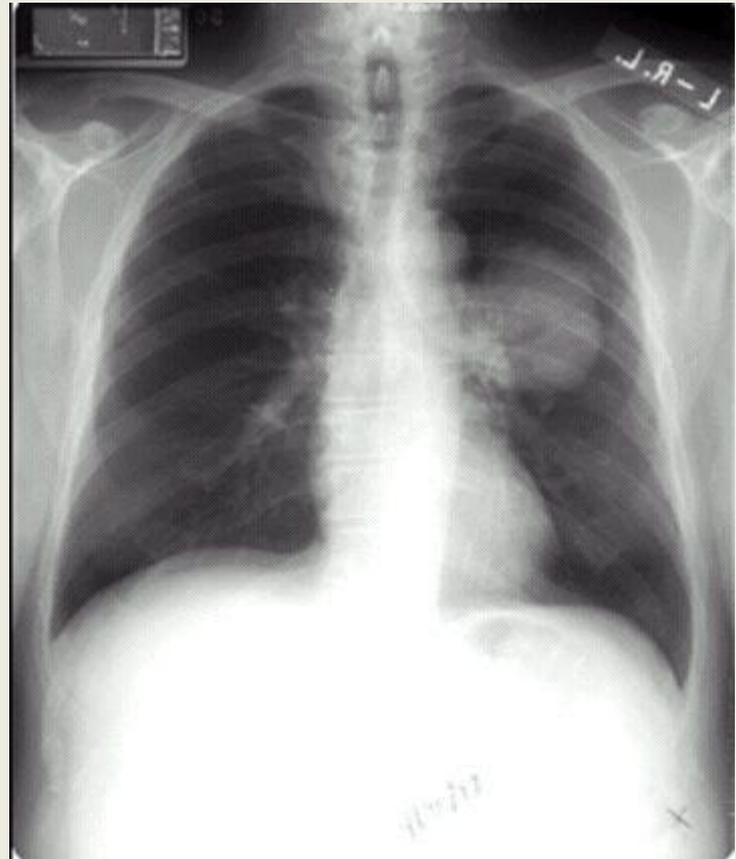

**changes according to the  
site of origin**

# Cancer Signs and Symptoms

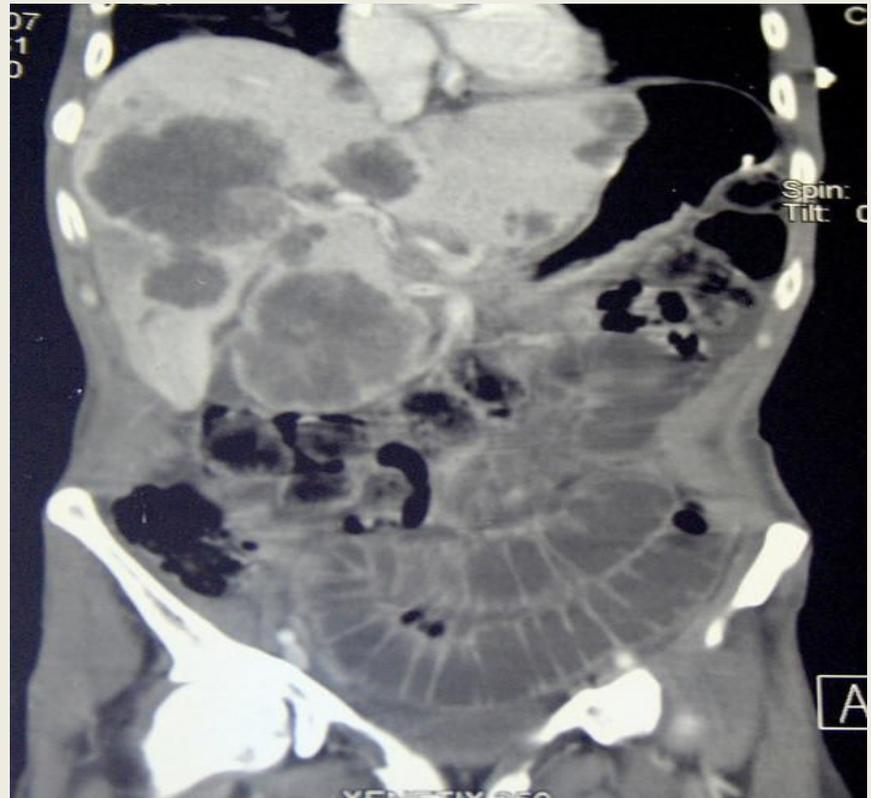

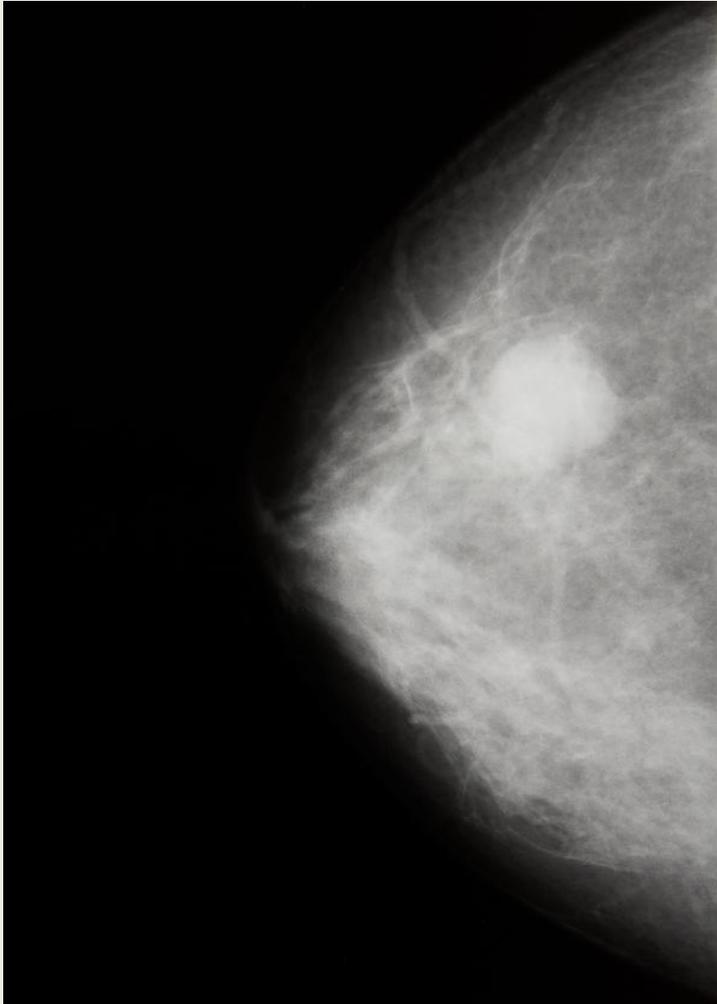

Think about the pathology and site:  
- Mass that is able to invade locally  
and **spread distantly**

## 2- How to diagnose cancer?

## 2- How to diagnose cancer?

# Cancer Signs and Symptoms

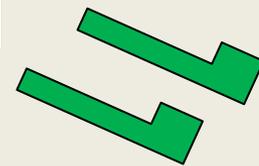

**Do not forge**t the constitutional symptoms:

- Fatigue
- Fever
- Sweating
- Wt loss

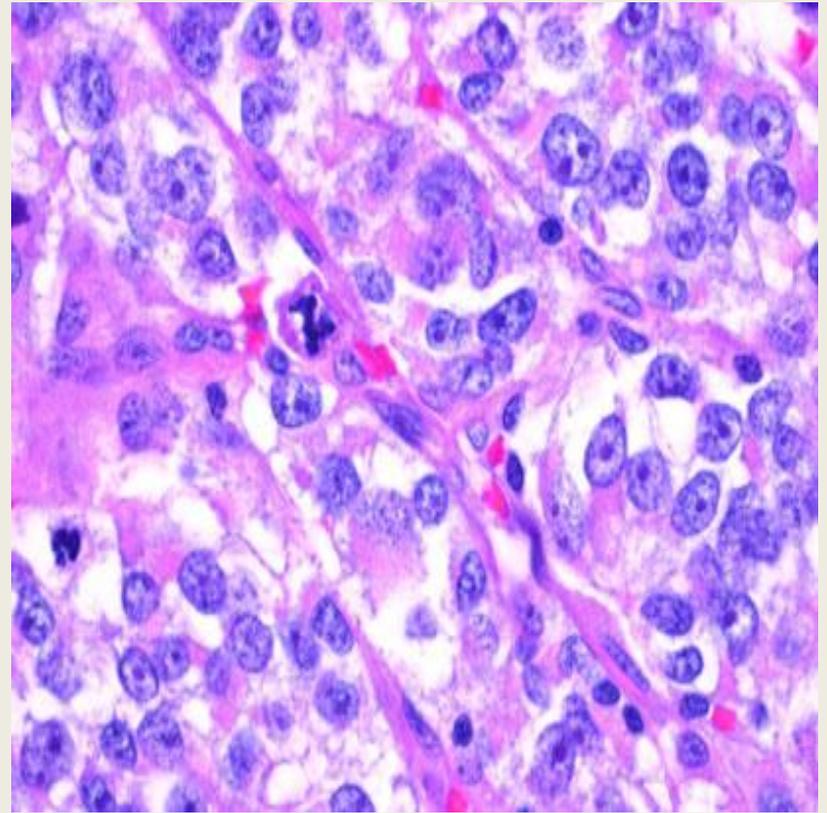

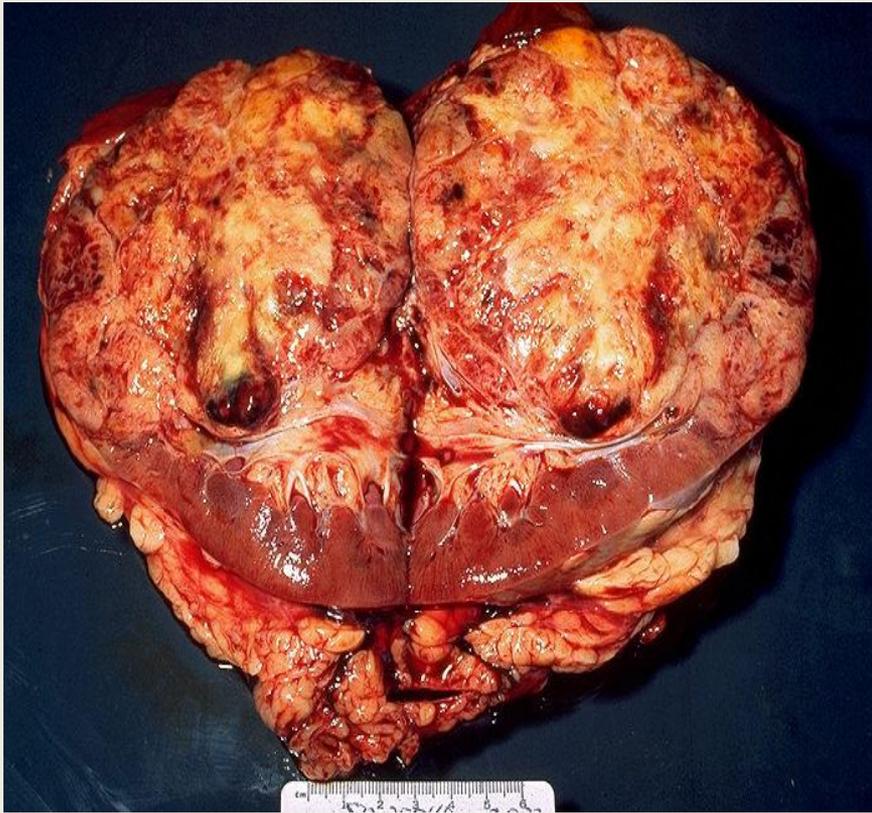

## 2- How to diagnose cancer?

### CANCER DIAGNOSIS

- IS **NOT** A CLINICAL DIAGNOSIS **X**
- IT IS **NOT** A RADIOLOGICAL DIAGNOSIS **X**
- IT IS **NOT** SEROLOGICAL DIAGNOSIS **X**
- IT IS A **PATHOLOGICAL** DIAGNOSIS
- IT IS A **TISSUE** DIAGNOSIS-

# GROSS AND MICROSCOPIC PICTURE OF RCC

# Categories of malignant disorders

- Liquid malignancies
  - 1-Myeloproliferative disorders= leukemia
  - 2-lymphoproliferative disorders= leukemia
- Solid malignancies

# Classification Of Solid Tumors

## Solid Tumors

```
graph TD; A[Solid Tumors] --> B[Epithelial tissues]; A --> C[Connective tissues]; B --> D[Surface]; B --> E[glandular]; D --> F[Carcinoma]; E --> F; C --> G[Bone]; C --> H[Soft tissues]; G --> I[Sarcoma]; H --> I;
```

Epithelial tissues

Connective tissues

Surface glandular

Bone Soft tissues

**Carcinoma**

**Sarcoma**

# 3- What the essential work up for staging?

**T**= tumor

**N**= Node

**M**= Metastases

**- RADIOLOGY:**

XRAY

MRI

CT

US

**SURGICAL STAGING**

**Clinical TNM**

**Radiological TNM**

**Pathological TNM**

# General Staging of solid malignancies

**Early**

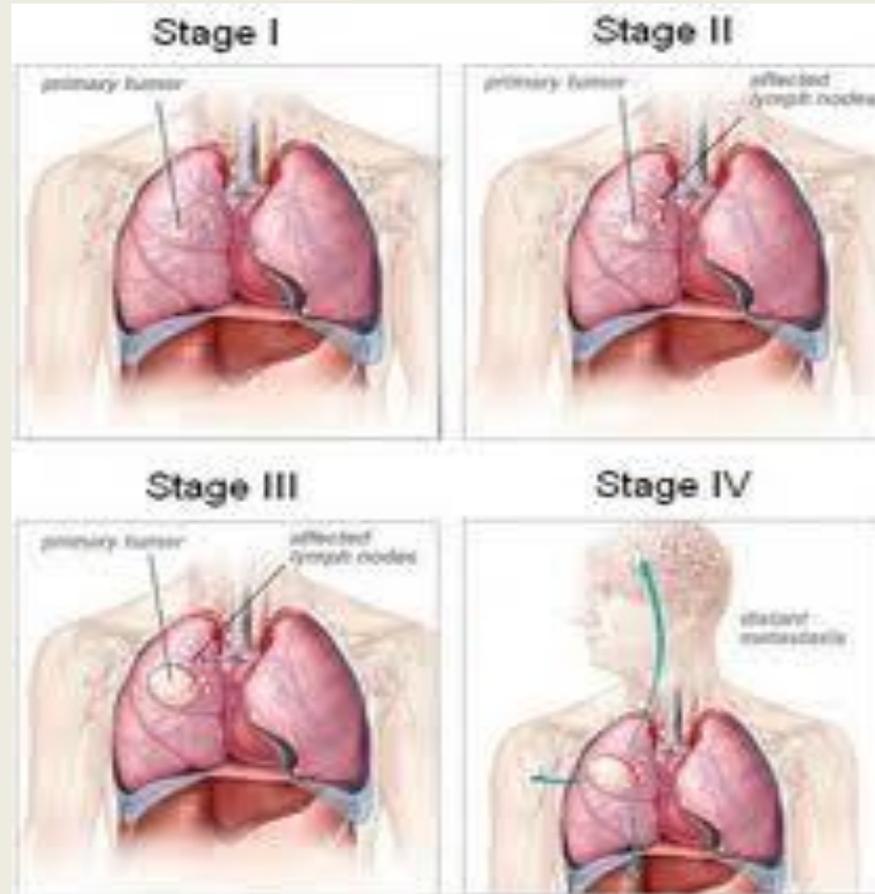

**Locally  
Advanced**

**Metastatic**

# Staging of Lung Cancer

**Early**

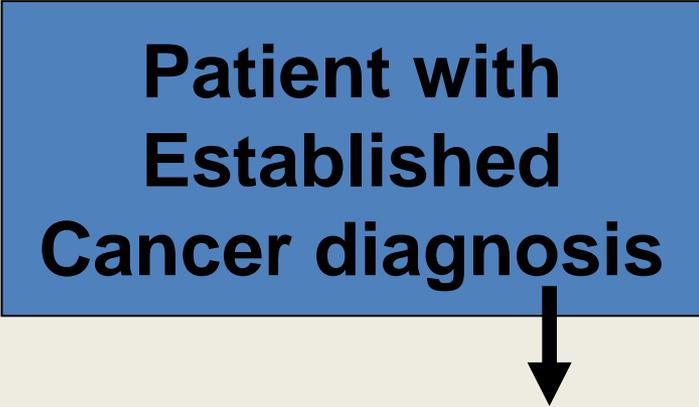

**Locally  
Advanced**

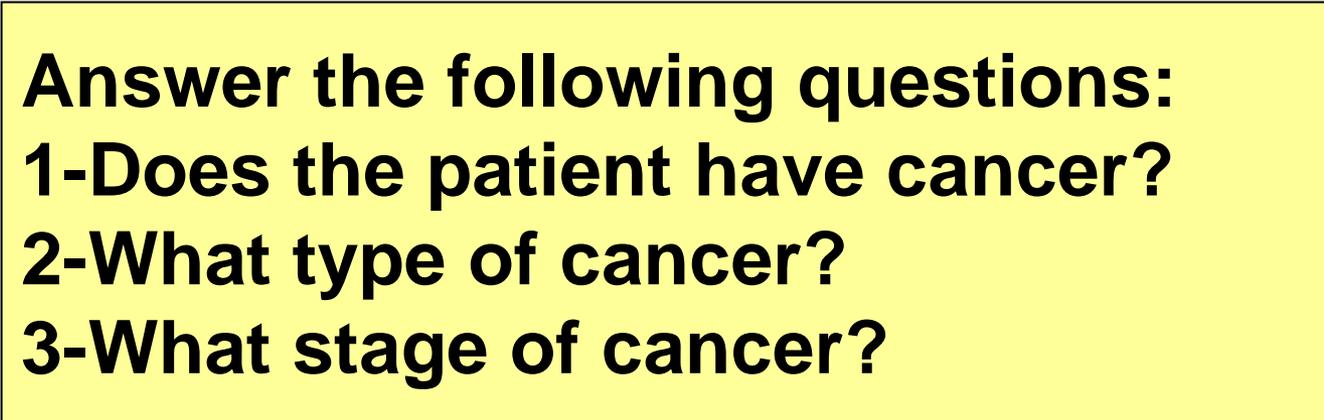

**Metastatic**

## 4- How to treat cancer?

**Patient with  
Established  
Cancer diagnosis**

**Answer the following questions:**  
**1-Does the patient have cancer?**  
**2-What type of cancer?**  
**3-What stage of cancer?**

# Management Multidisciplinary

**SURGERY**

**RADIATION**

**MEDICAL ONC**

- **Other Disciplines.**  
Radiology, Pathology, Lab
- **Combined clinics**
- **Tumor board**

**MANAGEMENT**

```
graph TD; A[MANAGEMENT] --> B[DETERMINE THE TREATMENT OBJECTIVE?]; B --> C[CURATIVE]; B --> D[PALLIATIVE];
```

**DETERMINE THE TREATMENT OBJECTIVE?**

**CURATIVE**

**PALLIATIVE**

TREATMENT MODALITIES

CURATIVE

THERAPY:

Aggressive, Expensive, recent,  
updated, complex,

TOXICITY:

LONG TERM , IRREVERSIBLE

TREATMENT MODALITIES

PALLIATIVE

Treatment :Simplest , Avoid  
hospitalization , Availability

Least toxic

TOXICITY:  
SHORT TERM , ACUTE, QUALITY OF LIFE

# Different Treatment Modalities

- Local therapy = Surgery & RTH
- Systemic therapy = Cth  
Hormones  
Biologicals

# Categories of malignant disorders

- Liquid malignancies
  - 1-Myeloproliferative disorders= leukemia
  - 2-lymphoproliferative disorders= lymphoma

## **Systemic therapy**

- Solid malignancies

## **According to stage**

# General Staging of solid malignancies

**Early**

**local  
+/- Systemic**

**Locally  
Advanced**

**■ local  
& Systemic**

**Metastatic**

**Systemic  
+/- Local**

## 5-What is the prognosis of your patient?

What can medicine offer the cancer patient?

- 1-The cancer type & extent ( stage)
- 2-The host factors (age , sex ,  
co morbidities)
- 3- The available tools

## 5-What is the prognosis of your patient?

### **1- Tumors that can be cured:**

lymphomas, leukemia, early solid tumors

### **2- Tumors that can have prolonged survival:**

Locally advanced and some of the metastatic tumors

### **3- Tumors that can be palliated:**

Metastatic solid tumors
