

Urologic Disorders

Mohammad Alomar

Consultant Urologist

Assistant professor of Surgery

Urologic Disorders

- Urinary tract infections
- Urolithiasis
- Benign Prostatic Hyperplasia and voiding dysfunction

Urinary tract infections

- Urethritis
- Epididymitis/orchitis
- Prostatitis
- cystitis
- Acute Pyelonephritis
- Chronic Pyelonephritis
- Renal Abscess

URETHRITIS

- S&S
 - urethral discharge
 - burning on urination
 - Asymptomatic
- **Gonococcal vs. Nongonococcal**

DX:

- incubation period(3-10 days vs. 1-5 wks)
- Urethral swab
- Serum: Chlamydia-specific ribosomal RNA

URETHRITIS

Table 17–1. CLASSIC URETHRITIS

	Gonorrhea	Chlamydia
Organism	<i>Neisseria gonorrhoeae</i>	<i>Chlamydia trachomatis</i>
Organism type	Gram-negative diplococci	Intracellular facultative anaerobe
Incubation period	3–10 days	1–5 wk
Urethral discharge	Usually profuse, purulent	Usually scant
Asymptomatic carriers	40%–60%	40%–60%
Diagnostic test	Ligand chain reaction	Polymerase/ligand chain reaction
Other tests	Gram stain Culture Immunoassay	Culture Azithromycin 1g PO or Doxycycline 100 mg PO bid × 7 days
Recommended treatment	Ceftriaxone 125 mg IM once <i>plus</i> Azithromycin 1 g PO <i>or</i> Doxycycline 100 mg PO bid × 7 days	Erythromycin 500 mg PO qid 7 days <i>or</i> Erythromycin ethylsuccinate 800 mg PO qid × 7 days <i>or</i> Ofloxacin 300 mg PO bid × 7 days
Alternative treatment	Cefixime 400 mg PO <i>or</i> Ciprofloxacin 500 mg PO <i>or</i> Ofloxacin 400 mg PO <i>plus</i> Azithromycin 1 g PO <i>or</i> Doxycycline 100 mg PO bid × 7 days	

Epididymitis

- Acute : pain, swelling, of the epididymis <6wk
- chronic :long-standing pain in the epididymis and testicle, usu. no swelling.
- DX
 - Epididymitis vs. Torsion
 - U/S
 - Testicular scan
 - Younger : *N. gonorrhoeae* or *C. trachomatis*
 - Older : *E. coli*

Epididymitis

Table 17–3. TREATMENT OF ACUTE EPIDIDYMO-ORCHITIS

Epididymo-Orchitis Secondary to Bacteriuria

1. Do urine culture and sensitivity studies
2. Promptly administer broad-spectrum antimicrobial agent (e.g., tetracycline, trimethoprim-sulfamethoxazole, quinolone antibiotic)
3. Prescribe bed rest and perform scrotal evaluation
4. Strongly consider hospitalization
5. Evaluate for underlying urinary tract disease

Epididymo-Orchitis Secondary to Sexually Transmitted Urethritis

1. Do Gram stain of urethral smear
 2. Administer ceftriaxone, 250 mg IM once; then tetracycline, 500 mg PO qid for at least 10 days, or doxycycline, 100 mg PO bid for at least 10 days
 3. Prescribe bed rest and perform scrotal evaluation
 4. Examine and treat sexual partners
-

Prostatitis

- Syndrome that presents with inflammation± infection of the prostate gland including:
 - Dysuria, frequency
 - dysfunctional voiding
 - Perineal pain
 - Painful ejaculation

Prostatitis

Table 15–1. CLASSIFICATION SYSTEM FOR THE PROSTATITIS SYNDROMES

Traditional	National Institutes of Health	Description
Acute bacterial prostatitis	Category I	Acute infection of the prostate gland
Chronic bacterial prostatitis	Category II	Chronic infection of the prostate gland
N/A	Category III chronic pelvic pain syndrome (CPPS)	Chronic genitourinary pain in the absence of uropathogenic bacteria localized to the prostate gland with standard methodology
Nonbacterial prostatitis	Category IIIA (inflammatory CPPS)	Significant number of white blood cells in expressed prostatic secretions, postprostatic massage urine sediment (VB3), or semen
Prostatodynia	Category IIIB (noninflammatory CPPS)	Insignificant number of white blood cells in expressed prostatic secretions, postprostatic massage urine sediment (VB3), or semen
N/A	Category IV asymptomatic inflammatory prostatitis (AIP)	White blood cells (and/or bacteria) in expressed prostatic secretions, postprostatic massage urine sediment (VB3), semen, or histologic specimens of prostate gland

N/A, not applicable.

Prostatitis

- Acute Bacterial Prostatitis :
 - Rare
 - Acute pain
 - Storage and voiding urinary symptoms
 - Fever, chills, malaise, N/V
 - Perineal and suprapubic pain
 - Tender swollen hot prostate.
 - Rx : Abx and urinary drainage

Chronic Prostatitis/Chronic Pelvic Pain Syndrome

CATEGORY II Chronic Bacterial Prostatitis

- ↓
 - Antimicrobials (4-12 weeks)
 - ↓
 - Antimicrobials and Prostatic Massage
 - ↓
 - Suppressive/Prophylactic Antimicrobials
 - ↓
 - Surgery (last resort unless specific indication)

CATEGORY IIIA Chronic Nonbacterial Prostatitis

- ↓
 - Antimicrobials (4 weeks)
 - ↓
 - Prostatic Massage (+/- antimicrobials)
 - ↓
 - Alpha blockers
 - ↓
 - Anti-inflammatories
 - ↓
 - Phytotherapy
 - ↓
 - Finasteride or Pentosanpolysulfate
 - ↓
 - Surgery (if indication)
 - ↓
 - Microwave Heat Therapy (last resort)

CATEGORY IIIB Prostodynbia

- ↓
 - Analgesics
 - Anti-inflammatories and/or
 - Muscle Relaxants
 - alpha blockers
 - diazepam/baclophen
 - ↓
 - Physical Therapies
 - biofeedback
 - perineal/pelvic floor massage
 - trigger point release
 - ↓
 - Surgery (if indication)
 - ↓
 - Reassurance and Psychological Support

cystitis

- **S&S:**
 - **dysuria, frequency, urgency, voiding of small urine volumes,**
 - **Suprapubic /lower abdominal pain**
 - ± Hematuria
 - **DX:**
 - dip-stick
 - urinalysis
 - **Urine culture**

Table 14–10. TREATMENT REGIMENS FOR ACUTE CYSTITIS

Circumstances	Route	Drug	Dosage (mg)	Frequency per Dose	Duration (days)
Women					
Healthy	Oral	Ciprofloxacin Enoxacin Levofloxacin Lomefloxacin TMP-SMX TMP Microcrystalline nitrofurantoin Norfloxacin TMP-SMX or Fluoroquinolone	500 400 500 400 160–800 100 100 400 160–800 As above	Every 12 hr Every 12 hr Every day Every day Every 12 hr Every 12 hr Four times a day Every 12 hr Every 12 hr As above	3
Symptoms for >7 days, recent urinary tract infection, age >65 yr, diabetes, diaphragm use					7
Pregnancy	Oral	Amoxicillin Cephalexin Microcrystalline nitrofurantoin TMP-SMX	250 500 100 160–800	Every 8 hr Four times a day Four times a day Every 12 hr	7
Men					
Healthy and <50 years old	Oral	TMP-SMX or Fluoroquinolone	160–800 As above	Every 12 hr As above	7

TMP, trimethoprim; TMP-SMX, trimethoprim-sulfamethoxazole.

Pyelonephritis

- Inflammation of the kidney and renal pelvis
- S&S :
 - Chills
 - Fever
 - Costovertebral angle tenderness (flank Pain)
 - GI:abdo pain, N/V, and diarrhea
 - Gr-ve sepsis
 - Dysuria, frequency

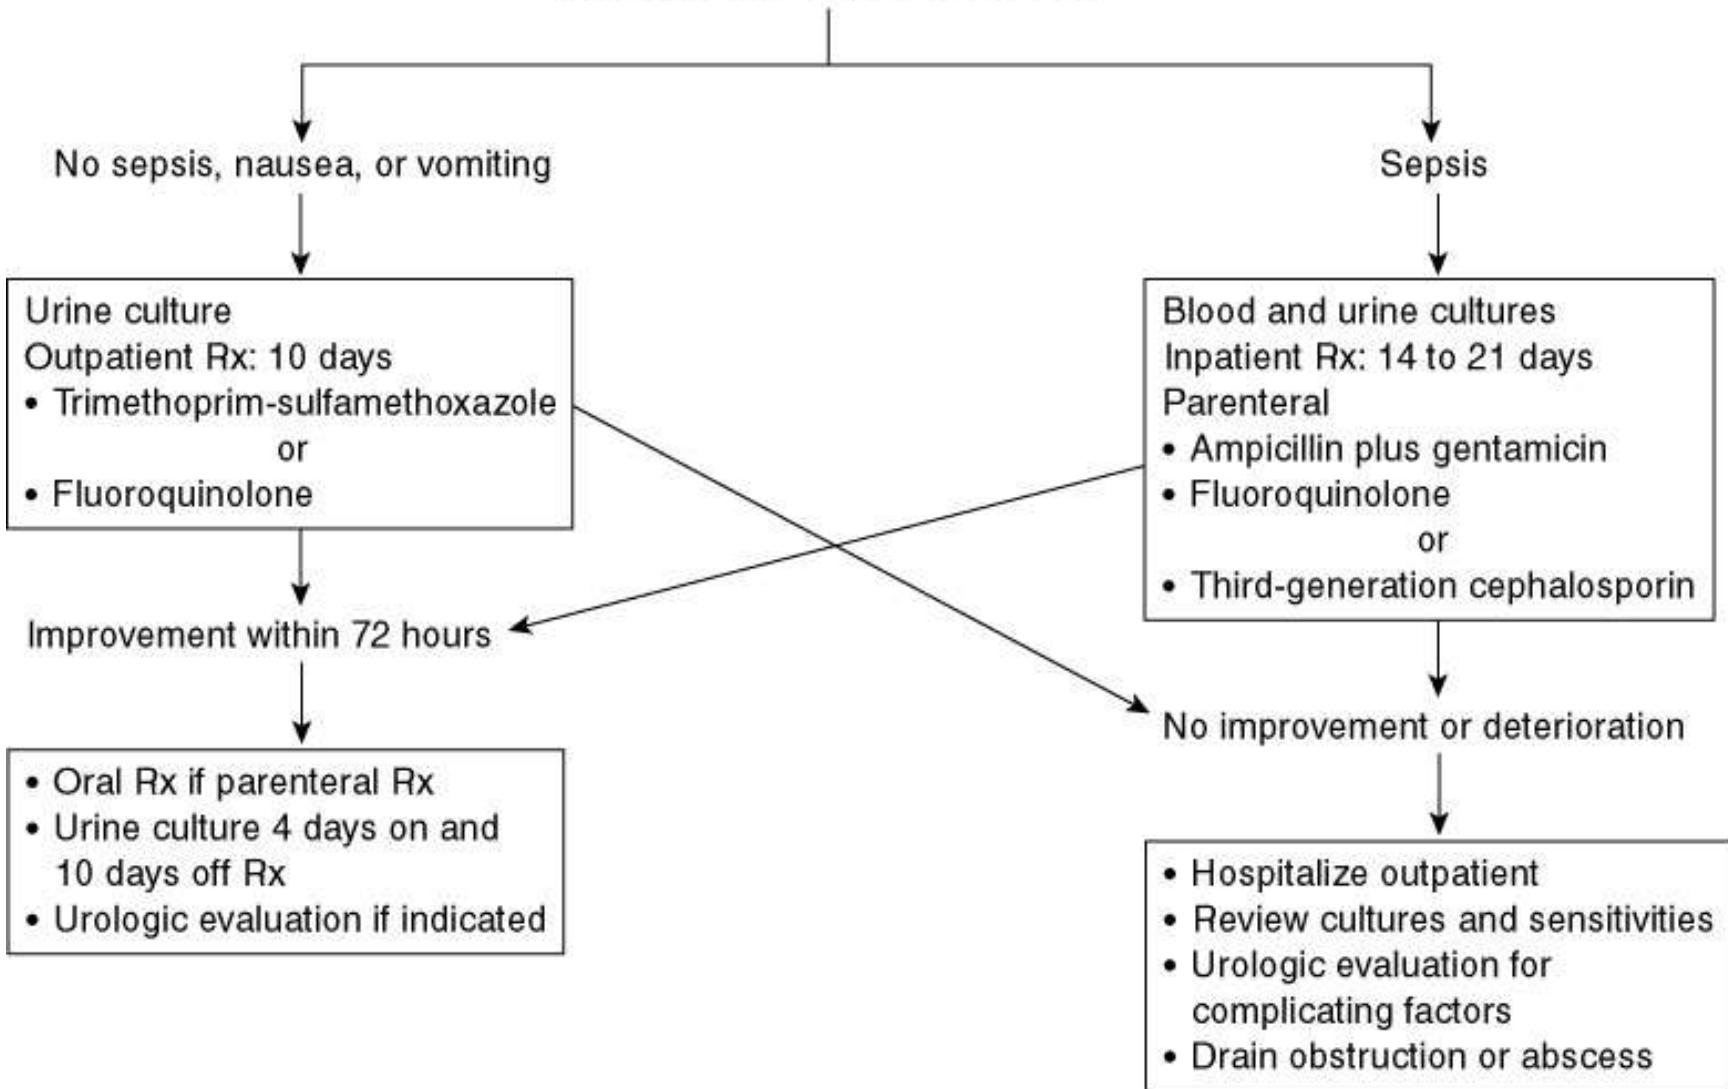

Pyelonephritis

- Investigation:
 - Urine C&S :+VE(80%)
 - *Enterobacteriaceae (E. coli), Enterococcus*
 - Urinalysis: ↑ WBCs, RBCs, Bacteria
 - (±) ↑ serum Creatinine
 - CBC : Leukocytosis

Pyelonephritis

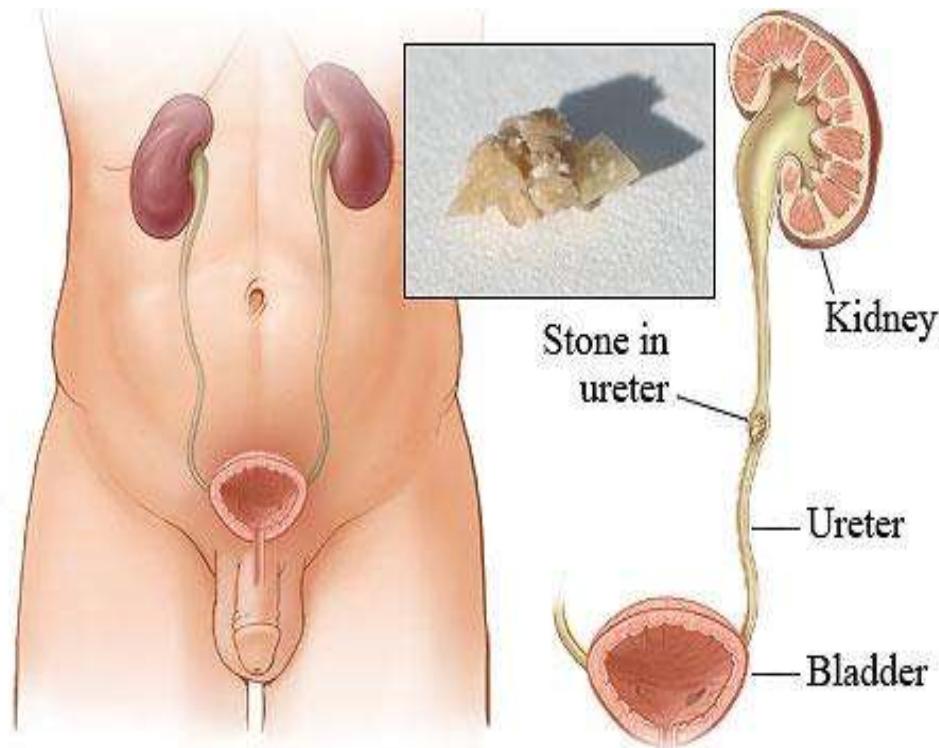

- Imaging:
 - IVP
 - U/S
 - CT

Symptoms and Signs of Pyelonephritis
(Fever, Flank Pain, Leukocytosis)

Urolithiasis

- Egyptian mummies
4800 BC
- Prevalence of 2% to 3%,
- Life time risk: Male :
20%, female 5-10%
- Recurrence rate 50% at
10 years

Urolithiasis

- Risk factors:
 - Intrinsic Factors
 - *Genetics*
 - *Age (20s-40s)*
 - *Sex M>F*

Urolithiasis

- **Extrinsic Factors**

- *Geography* (mountainous, desert, tropics)
- *Climate (July - October)*
- *Water Intake*
- *Diet* (purines , oxalates, Na)
- *Occupation* (sedentary occupations)

Urolithiasis

- **How do stones form**
 - supersaturated → Crystal Growth
 - Aggregation of crystals → stone

Urolithiasis

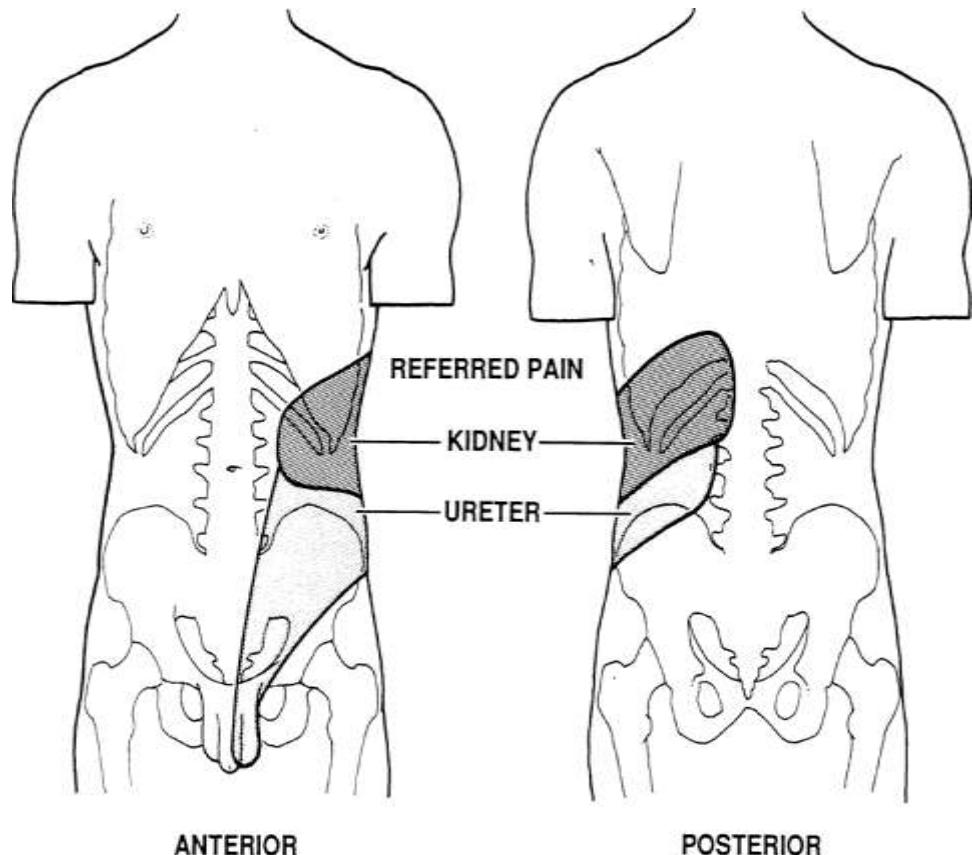

- **Most people have crystals in their urine, so why not everyone gets stones?**
 - Anatomic abnormalities
 - Modifiers of crystal formation: Inhibitors/promoters
 - Citrate
 - Mg,
 - urinary proteins(nephrocalcin)
 - oxalate

Urolithiasis

- Common stone types
 - Calcium stones 75%
 - (ca Ox)
 - Uric acid stones
 - Cystine stones
 - Struvite stones

Urolithiasis

- S&S
 - Renal or ureteric colic
 - Freq, dysuria
 - Hematuria
 - GI symptoms: N/V, ileus, or diarrhea
 - DDx :
 - Gastroenteritis
 - acute appendicitis
 - colitis
 - salpingitis

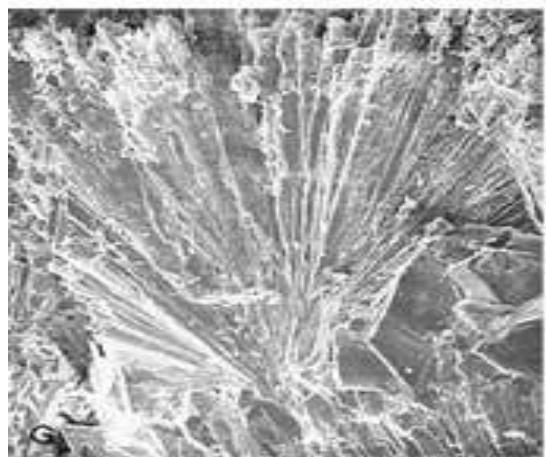

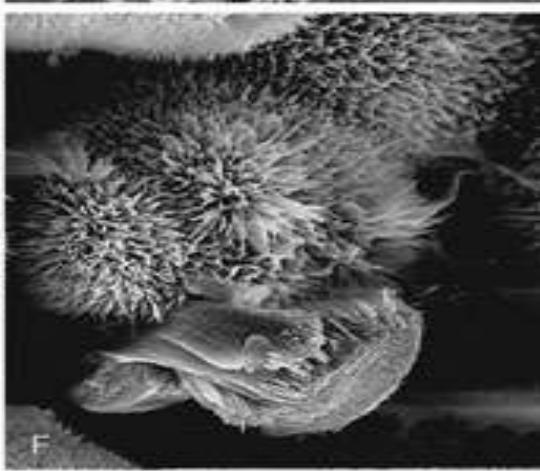

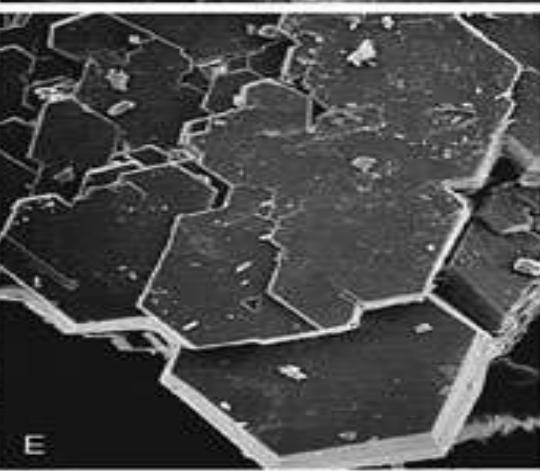

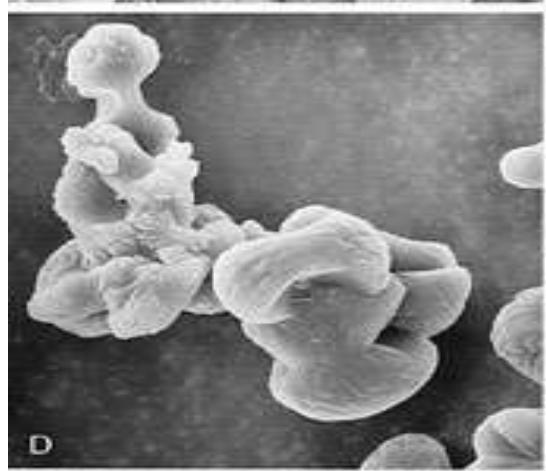

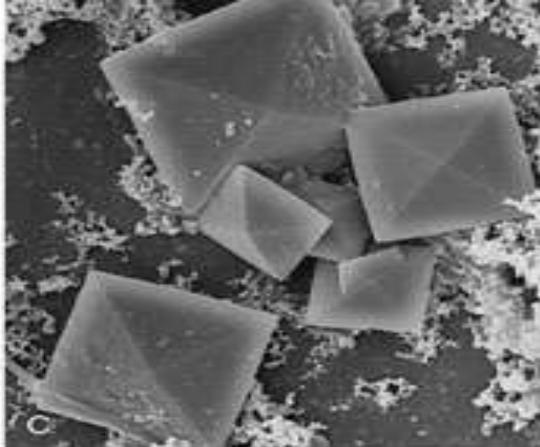

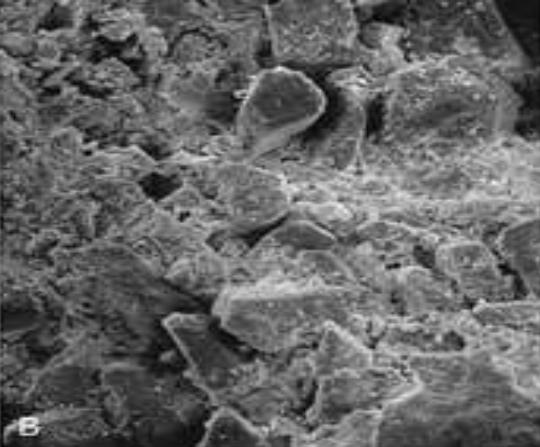

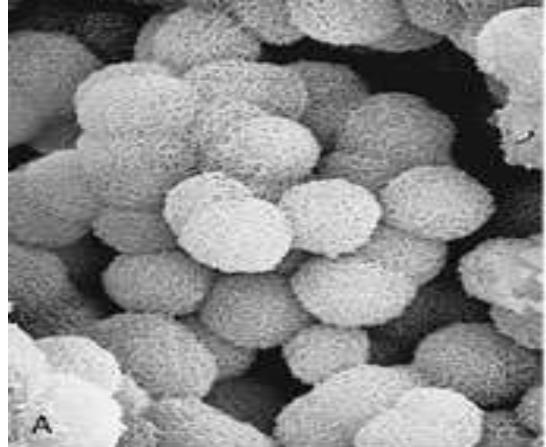

Urolithiasis

- Cont. S&S
 - Restless
 - ↑HR, ↑ BP
 - fever (If UTI)
 - Tender CVA

Urolithiasis Investigation

- ***Urinalysis :***

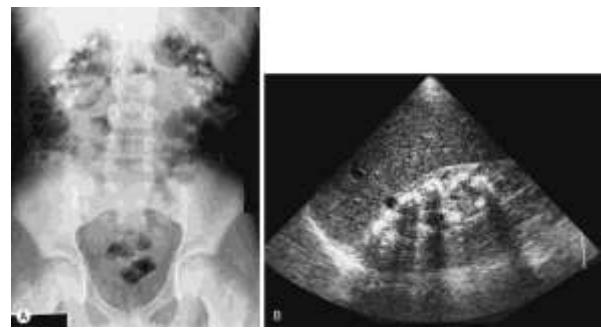

- RBC
- WBC
- Bacteria
- Crystals

Dr. Mohammad AlOmar

Urolithiasis Investigation

- Imaging
 - Plain Abdominal Films (KUB)
 - Intravenous Urography (IVP)
 - Ultrasonography (U/S)
 - Computed Tomography (CT)

Dr. Mohammad AlOmar

Urolithiasis Management

- Conservative
 - Hydration
 - Analgesia
 - Antiemetic
 - Stones (<5mm) >90% spontaneous Passage
- Indication for admission
 - Renal impairment
 - Refractory pain
 - Pyelonephritis
 - intractable N/V

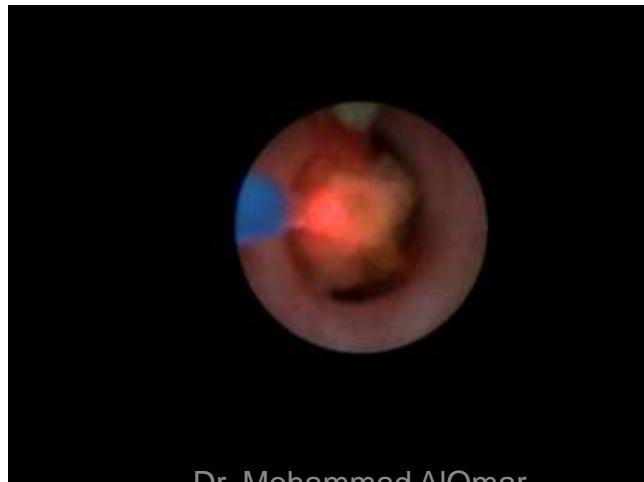

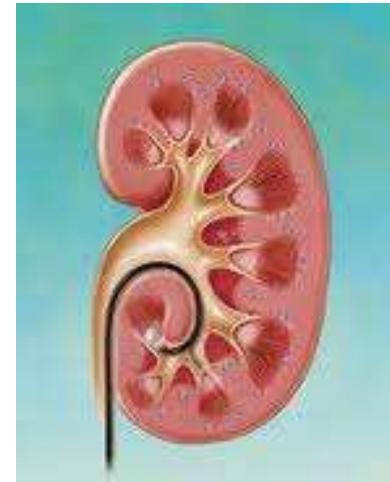

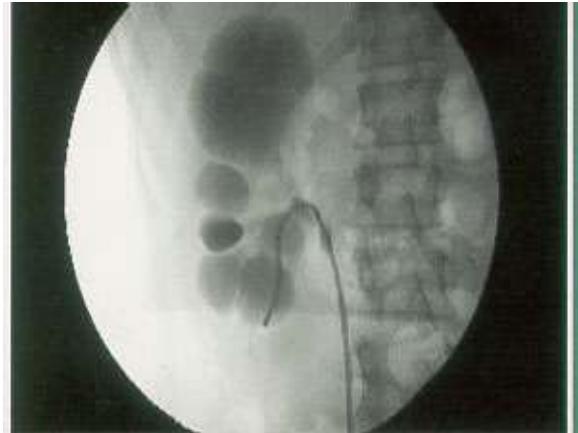

Urolithiasis Management

- Extracorporeal Shock Wave lithotripsy (SWL)
- Ureteroscopy
- Percutaneous Nephrolithotripsy (PNL)
- Open Sx

Extracorporeal Shock Wave lithotripsy (SWL)

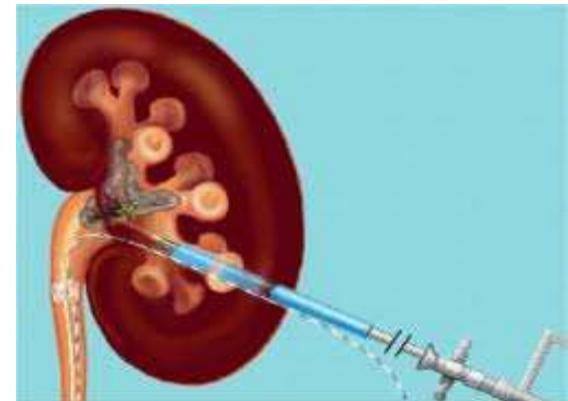

Flexible Ureteroscopy

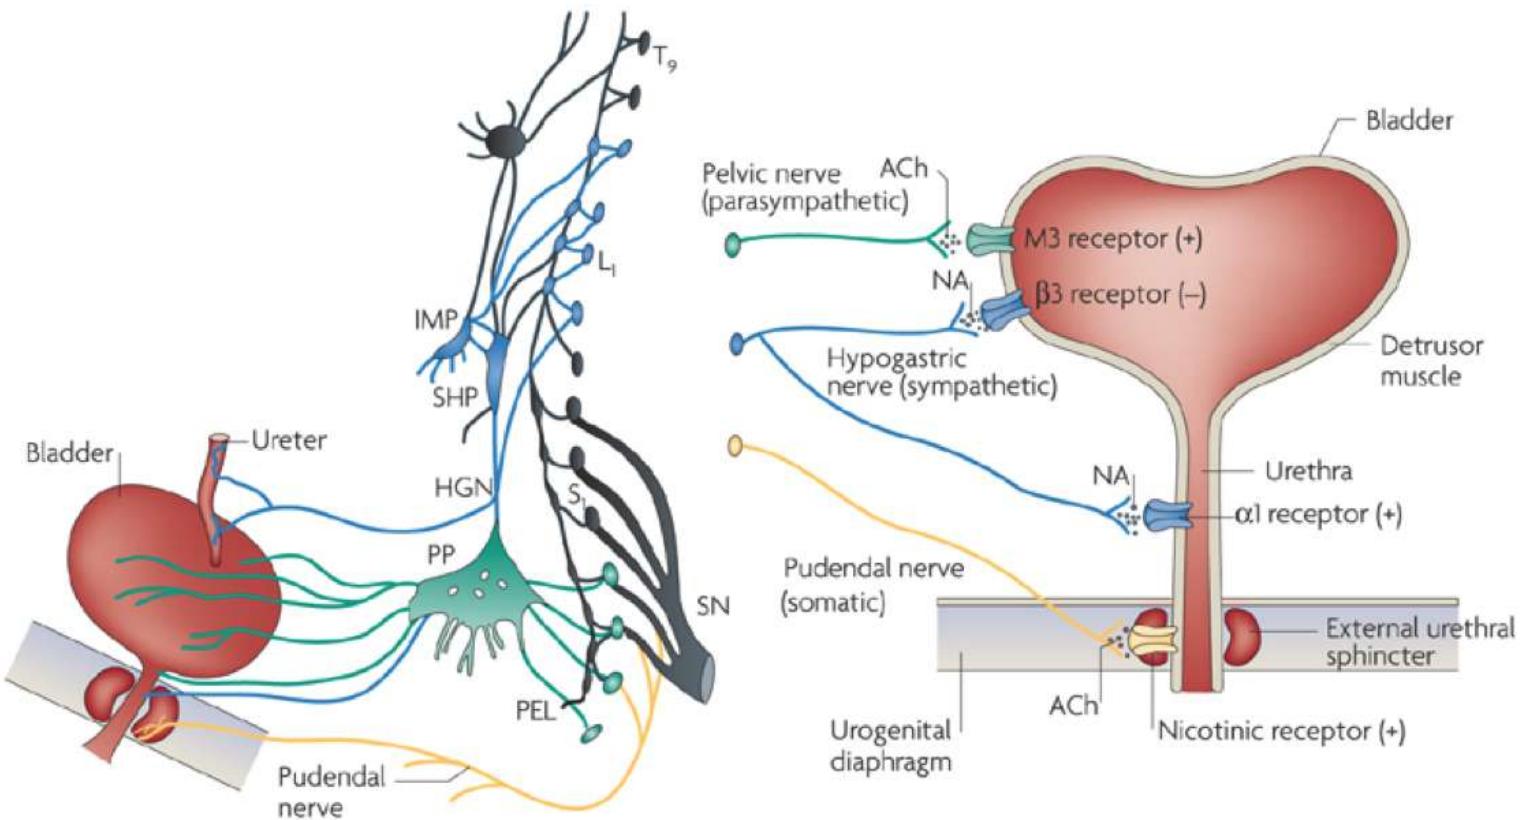

Dr. Mohammad AlOmar

Percutaneous Nephrolithotripsy (PNL)

Dr. Mohammad AlOmar

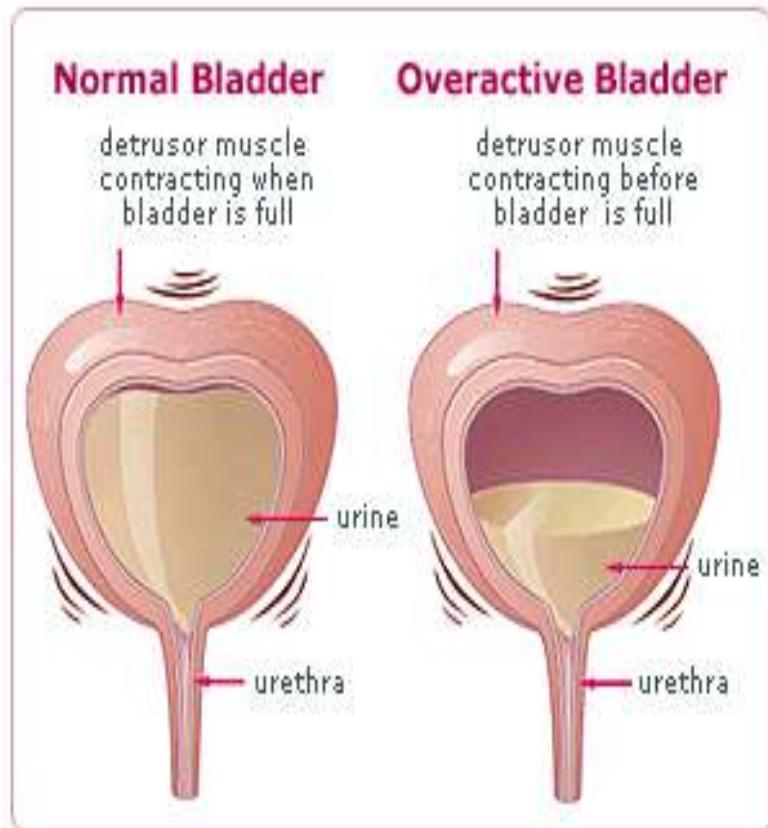

Voiding Dysfunction

Voiding Dysfunction

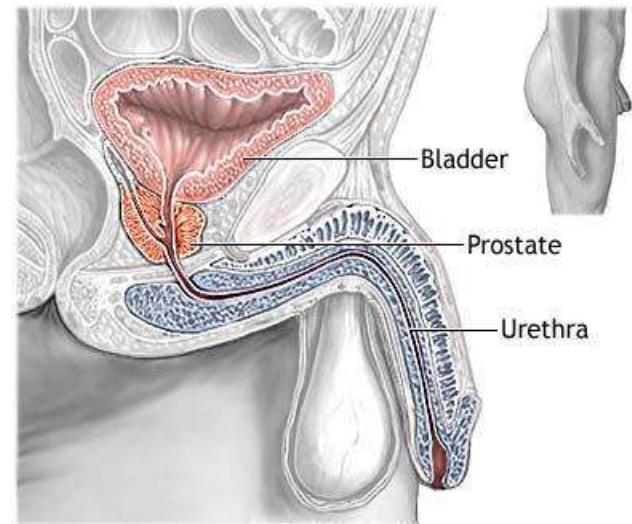

- Failure to store
 - Bladder problems
 - overactivity
 - Hypersensitivity
 - Outlet problem
 - Stress incontinence
 - Sphincter deficiency
 - combination
- Failure to Empty
 - Bladder problems
 - Neurologic
 - Myogenic
 - idiopathic
 - Outlet problem
 - BPH
 - Urethral stricture
 - Sphincter dyssynergia
 - combination

Over Active Bladder

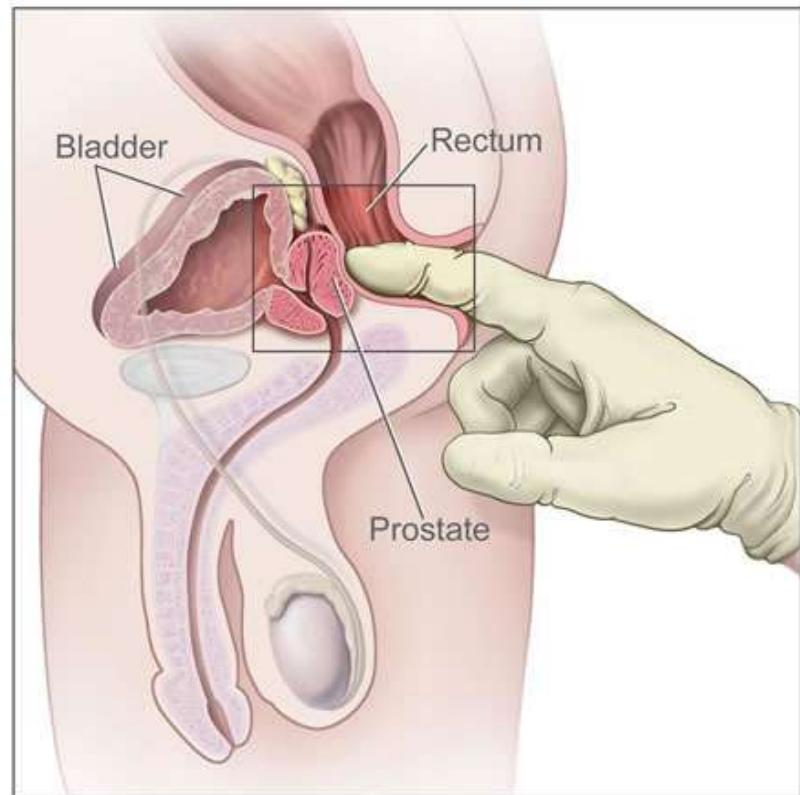

Benign Prostatic Hyperplasia

- Clinically:
 - LUTS
 - poor bladder emptying
 - urinary retention
 - urinary tract infection
 - Hematuria,
 - Renal insufficiency

Benign Prostatic Hyperplasia

- Physical Examination
 - 1-DRE 2- Focused neurologic exam
 - Prostate Ca
 - rectal Ca
 - anal tone
 - neurologic problems
 - Abdomen: distended bladder

Benign Prostatic Hyperplasia

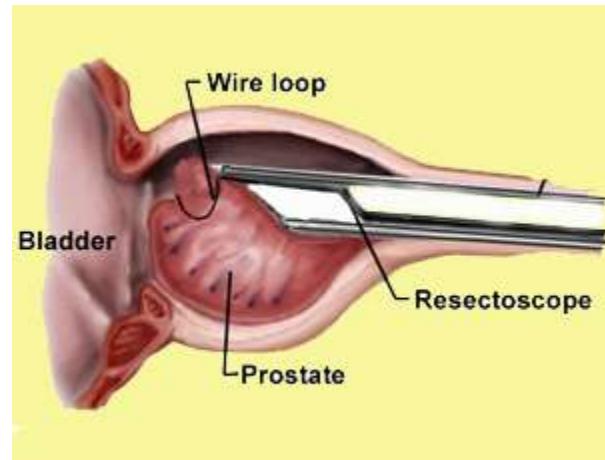

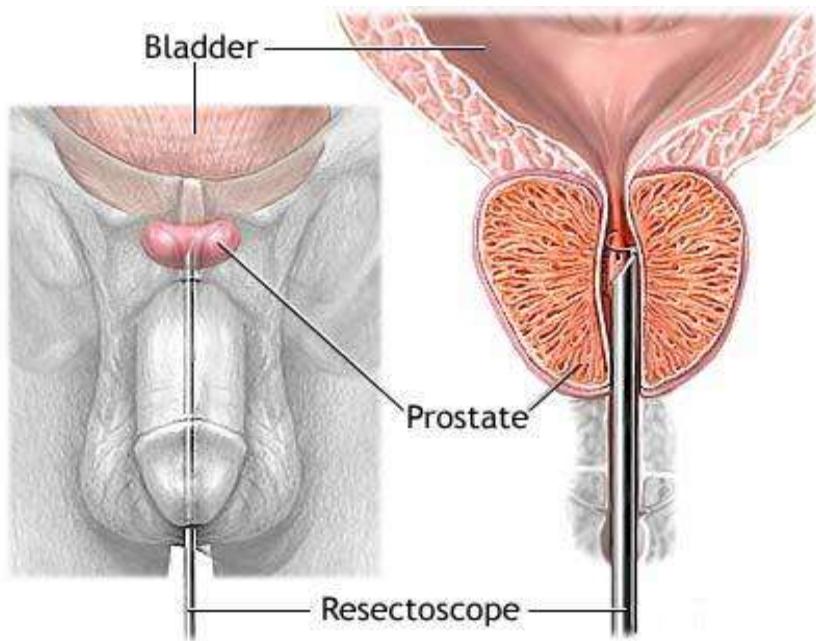

- Urinalysis , culture
 - UTI
 - Hematuria
- Serum Creatinine
- Serum Prostate-Specific Antigen
- Flow rate
- Ultrasound (Kidney, Bladder And Prostate)

Benign Prostatic Hyperplasia

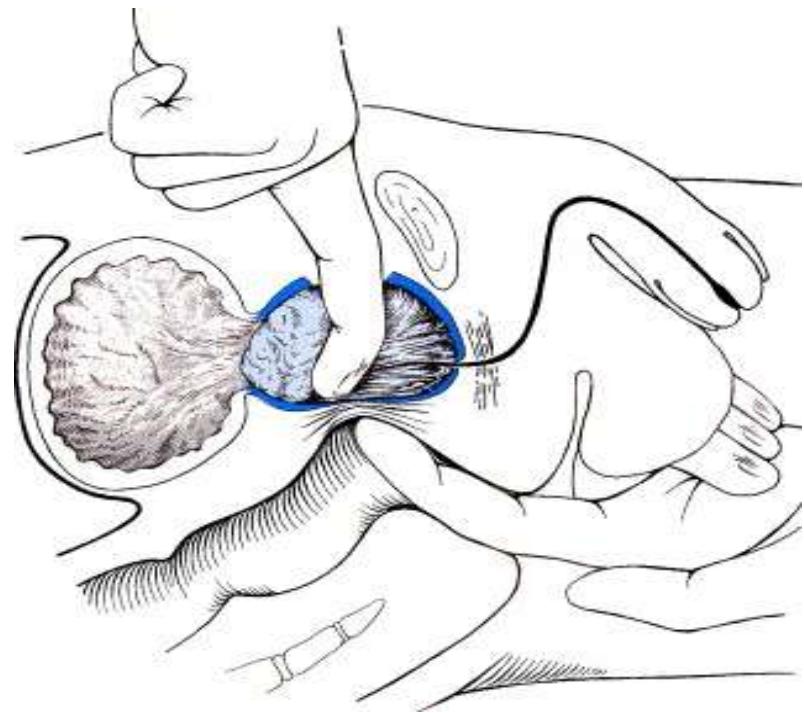

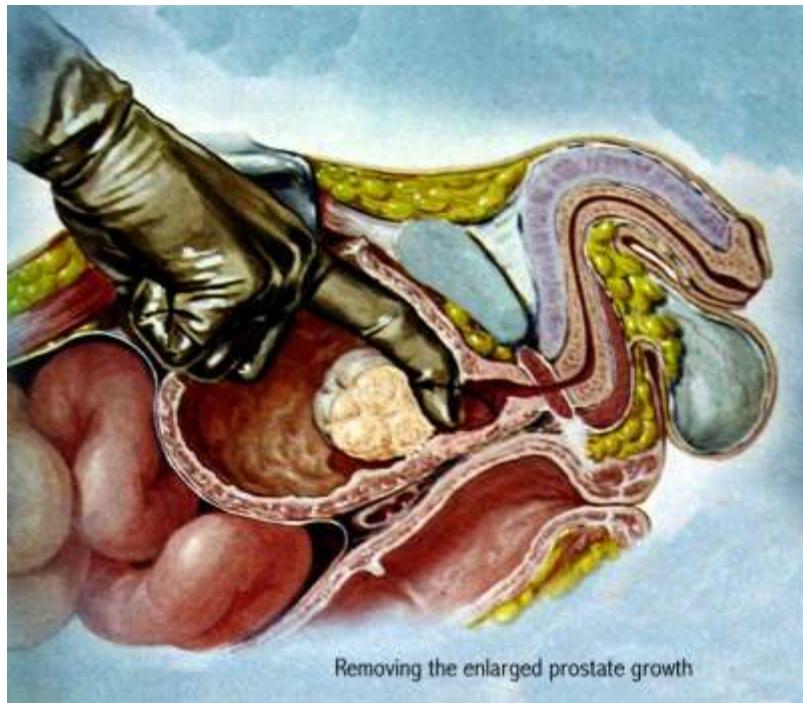

- Treatment options
 - medical therapy
 - α -Adrenergic Blockers
 - Tamsulocin
 - Alfuzocin
 - Terazocin
 - Androgen Suppression
 - Finasteride

Benign Prostatic Hyperplasia

- Surgical Rx
 - Endoscopic (e.g. TURP, laser ablation, prostatic stents)

Open Prostatectomy

Dr. Mohammad AlOmar
