

# Systole

# Diastole

Aortic valve → opened      Mitral Valve → closed

Aortic valve → closed      Mitral Valve → opened

If the opposite happens we get a **systolic** murmur:  
i.e. (aortic stenosis)  
(mitral regurgitation)

If the opposite happens we get a **diastolic** murmur:  
i.e. (aortic regurgitation)  
(mitral stenosis)

S2

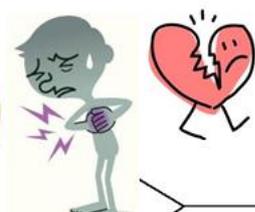

S1

**Parvus et Tardus S4!**

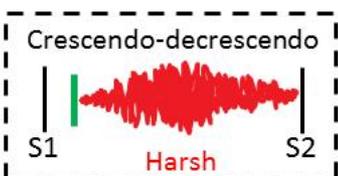

## Aortic Stenosis

Left Ventricular Hypertrophy

1- Angina 2- Syncope 3- HF

Radiates to "carotid" a.

## Mitral Stenosis

Most common cause:

**RF!**

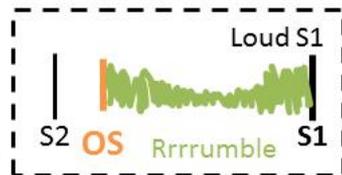

"Fish mouth"-shaped orifice

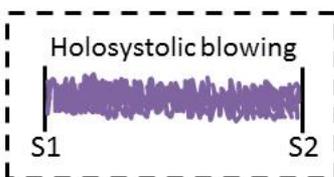

-diuretics -β blockers  
anticoagulants -SBE prophylaxis

Opening Snap

- Dyspnea  
- Palpitations  
- Hemoptysis  
- Fatigue

## Mitral Regurgitation

**S3!**

**MVP**

Fatigue  
Dysnea

**Diagnosis:**  
Echo 2D/color doppler  
The choice for all

Right-sided HF

**Causes:**  
• Leaflets abnormalities  
• Alterations of LV or LA size and Function

## Aortic Regurgitation

Widened Pulse Pressure

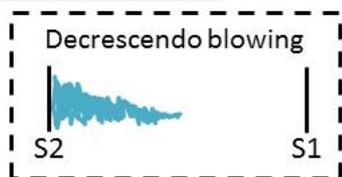

"water-hammer" (Corrigan) pulse

Austin "Flint" stones murmur

**Causes:**  
• "Leaflets" abnormalities  
• Aortic annulus dilation

Asymptomatic → medical  
Symptomatic → surgical
