

Paper Medical Record and Electronic Health Record (EHR)

PROF. AHMED ALBARRAK

Traditional Paper-based Medical Record

- Purpose: to record observations and could be reminded of patients' details.
- Input sources:
 - History
 - Notes
 - Lab
 - Radiology
 - Reports
 - Coding
 - Other

Traditional Paper-based Medical Record

Outputs:

Paper based medical records dis(advantages)

- Find the record (lost, being used elsewhere)
- Find data within the record (poorly organized, missing)
- Read data (legibility)
- Update data (manual)
- Record fragmentation
- Moving records
- Redundancy (re-enter data in multiple forms)
- Statistics and Research (can not search across patients)
- Passive (no automated decision support)

Main Purpose of Documentation

- Remembering what you did and why;
form basis for historical record
- Conveying information to Medical Team members;
Support communication among providers
- Coding and Billing
- Legal issues

Main Purpose of Documentation

- Anticipate future health problems
- Record standard preventive measures
- Identify deviations from expected trends example; growth chart
- Support clinical research

-
- Remembering what was done and why
 - Legibility
 - Ease of search
 - Granularity of information
 - Miss filings
 - Lost charts

Disadvantages

- Learning curve
- Slower-time
- Security/privacy concerns
- Cost, initial cost, running and maintenance
- Upgrades and depreciation

Role of medical records

Transcription

Coding

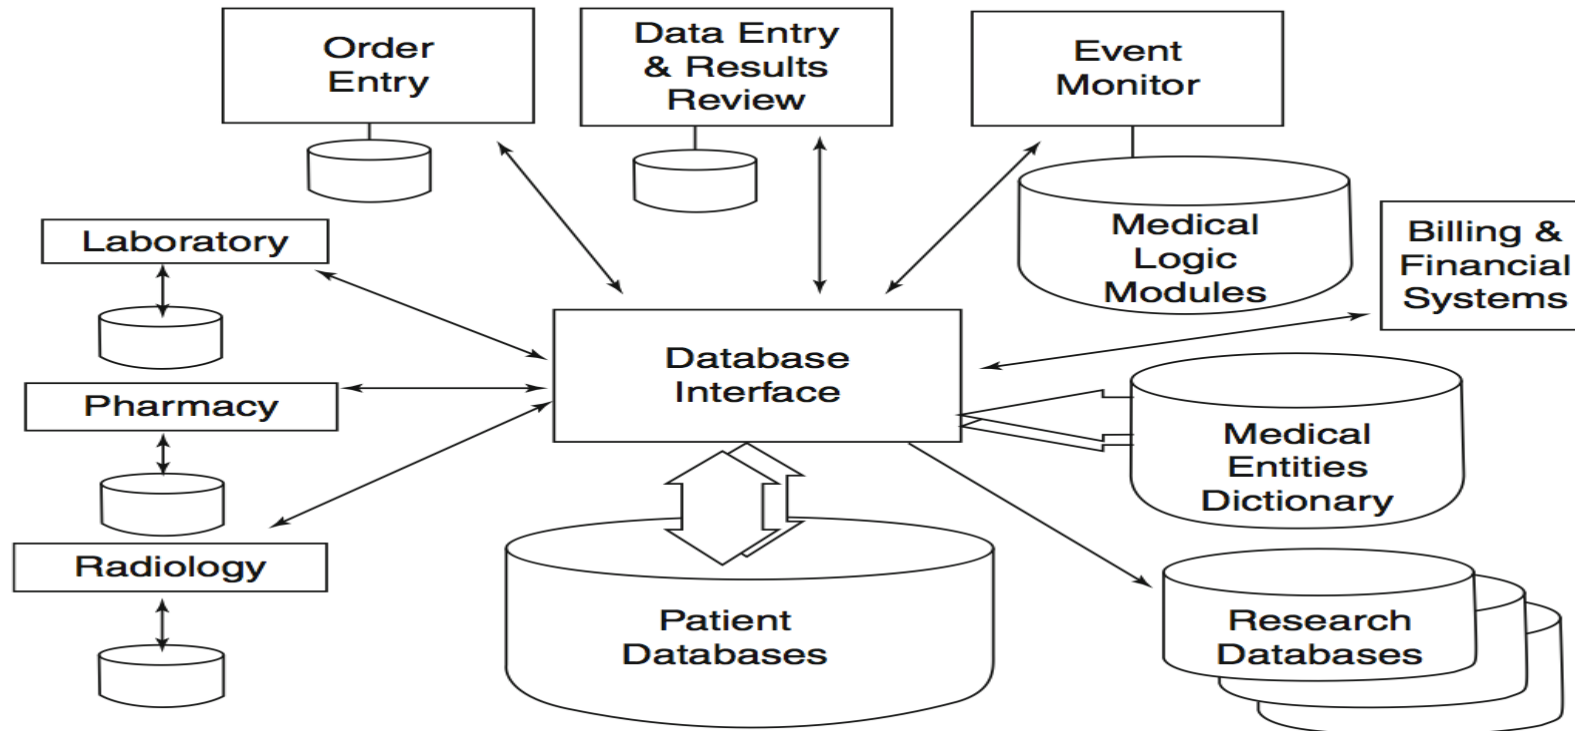

Quality check

Security

administration

Training

Research

Block Diagram showing multiple systems feeding into patient database. The Database Interface or Interface Engine may perform intelligent filtering, translating and alert functions (page 396, Shortliffe)

Medical records...

Medical records serves a variety of functions for organizations not involved directly in care:

- Insurers (government and private) to justify payment for medical services rendered, and to detect fraud.
- Quality reviews, administrative reviews, and utilization studies to manage the business aspects of health care.
- Used for societal purposes, such as, social service and welfare system management, law enforcement, screening and licensing and determining life insurance eligibility.
- Medical research, public health management
- Education and medical training

EMR

- A general term describing computer-based patient record systems. It is sometimes extended to include other functions like order entry for medications and tests, amongst other common functions.
- EMR (Electronic Medical Record) – the set of databases (lab, pharmacy, radiology, clinical notes, etc.) that contains the health information for patients within a given institution or organization

EMR Components

- Results reporting
- Data repository
- Decision support
- Clinical messaging and communications; i.e. e-mail
- Documentation
- Order entry

Electronic Health Records (EHR)

- Definition: a repository of electronically maintained information about an individual's health status and health care, stored such that it can serve the multiple legitimate uses and users of the record.
- Other definition: Longitudinal electronic record of patient health information generated by one or more encounters in any care delivery setting
- Electronic Health Record System: includes the active tools that are used to manage the information.
- Interoperability standards to exchange info outside a single healthcare delivery system.
- Supports other care-related activities directly or indirectly—evidence-based decision support, quality management, and outcomes reporting

Computer-Based Patient Record (CPR)

- Comprehensive lifetime record
- Attributes identified by the Institute of Medicine (IOM) provide the basis for today's understanding of the EHR

Electronic Medical Record vs. Paper-Based Record

Function	Paper record	EMR
Availability and accessibility	One location	Multiple
Display	One format	Several format
Security	Low	High
Data	Difficult to extract	Should be easy to extract
Legibility	Low	More
Duplication of records	Yes	No – can all be linked
Duplication of tests	Yes	Rare
Patient interaction	None	Full – if desired

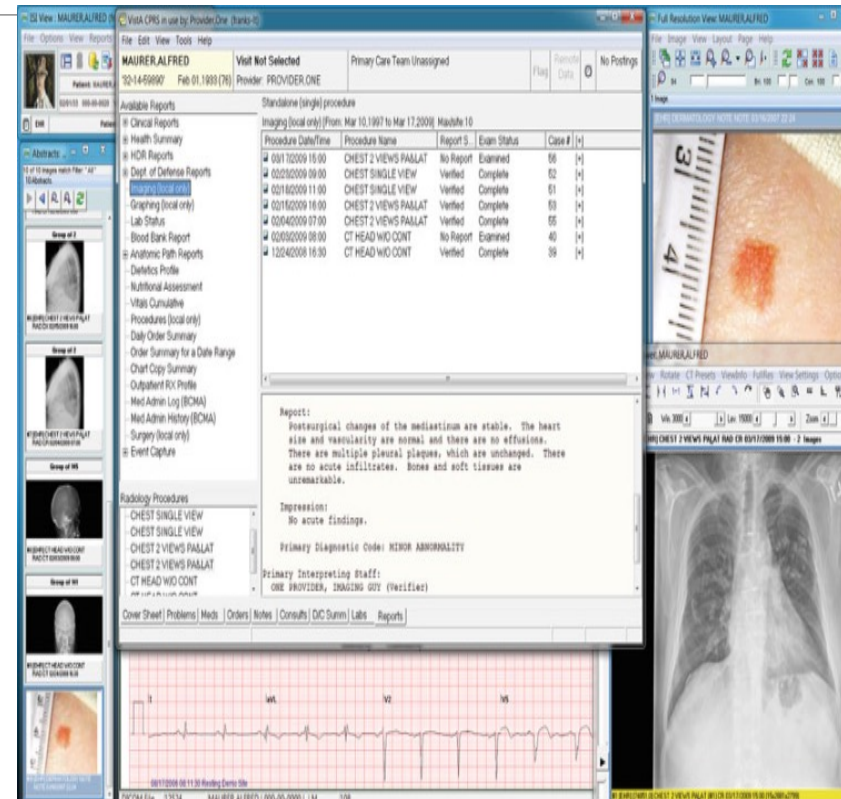

Functional Components of an Electronic Medical Record System

An EHR is not simply an electronic version of the paper record.

1. Integrated view of patient data
2. Clinician order entry
3. Clinical decision support
4. Access to knowledge resources
5. Integrated communication and reporting support

Integrated View of Patient Data

- Available at anytime anywhere
- Clinical Data has complexity and diversity
- Clinical Data requires different format and terminology
- Requires standards like HL7 to integrate the clinical data
- Local terminologies needs to be translated into standardized terminologies

(Source: Courtesy of WorldVista (worldvista. org) and ISI Group (www.isigp.com), 2012)

Integrated View of Patient Data

Interface Engine helps to become mediator for EHR to be connected to other vendor systems(Tracking system, Imaging system, Medication dispenser etc)

- Various views: Flowsheet, Chronological views, Summary Views

Clinician Order Entry

Electronic order entry can improve health care at several levels (computerized physician order entry (CPOE)):

- Reduce errors and costs.
- Deliver decision support at the point where clinical decisions are being made.

The screenshot shows a software interface titled "WizOrder PopUp" with a sub-header "PANE #5". A warning icon indicates "TPN fluid requirement must be a least 20 ml/kg/day". The main section is titled "Central Line TPN Order Sheet" and includes a patient identifier: "Patient: ZTSTSS, 7 Do (female) TPN Calculation Weight: 3.8 kg".

Key input fields and calculated values include:

- TPN fluid requirement: 10 ml/kg/day (not including lipids)
- Cycle TPN over: 24 hours
- Amino Acids as Trophamine: 2 grams/kg/day (with an option to add Cysteine at 30 mg/g of protein)
- Dextrose: 10 %
- Lipids 20%: 2 grams/kg/day over 24 hours (with an option to add Carnitine at 10 mg/kg/day if lipids are ordered)
- Sodium: 50 mEq/kg/day (Calculated 5000 mEq/liter)
- Potassium: 5 mEq/kg/day (Calculated 500 mEq/liter)
- Calcium: 15 mEq/liter (with options for 0, 15, or 30 mEq/liter)
- Magnesium: 5 mEq/liter
- Phosphate: 15 mmol/liter (calculated from calcium dose)

On the right side, there are radio button options for "Acetate/Chloride" (Minimal Chloride, 1:1 ratio, Minimal Acetate) and a "Calculate" button. Below these, calculated values are displayed:

- Amino Acid Calories: 8 kcal/kg/day
- Fat Calories: 20 kcal/kg/day
- Dextrose Calories: 3.4 kcal/kg/day
- Total Calories: 31.4 kcal/kg/day
- Lipid Rate: 1.6 ml/hr
- Lipid Volume: 10 ml/kg/day
- Calculated minimum TPN Rate: 6.3 ml/hr
- Calculated minimum TPN Volume: 152 ml/day
- Calculated TPN Rate: 1.6 ml/hr
- Calculated TPN Volume: 38 ml/day
- Total Fluid Volume (TPN + Fat): 20 ml/kg/day

At the bottom, there are buttons for "Submit Final Order" and "Exit Without Ordering". A section for "Added Medications and Supplements" lists: MVA-PEDIATRIC (5 ml wt >= 2.5 kg), Neotrace & Selenium (daily, M TH), and heparin (0.25 units/ml). "Other Possible Additives" include Vitamin K (1 mg/day), famotidine (mg/kg/day), and albumin (g/kg/day). The footer contains "Special Instructions to Pharmacy:" and "Copyright (C) 2005, Vanderbilt University Medical Center".

Integrated Communication and Reporting Support

- Communication tools could be an integrated part of the EHR system.
- Patient handoffs.
- Health Information Exchanges (HIE)

The screenshot displays a patient handoff report interface with a red border. At the top right, a yellow tab reads "Patient Handoff". Below it, a navigation bar contains "Enter Data", "Print Report", and "About". The main content area is divided into several sections:

- Code Status:** FULL CODE
- Isolation Status:** No specific isolation required
- Patient Summary:** Pt is a 86 yo M with PMH of CAD s/p , AS s/p AVR, severe OCP, and 7 mo hx of wheezing presents with cough, wheezing, and dyspnea for 2 d. Pt was initially 98% RA and doing well but then acutely desaturated. Has continued to have moderate-to-high suction requirements today.
- Primary Team To-Do List:**
 - TTE
 - f/u blood cx
 - abnormal
 - vac trough before 4th dose 12am 8-2
 - f/u Bcx, Ucx's from fever
 - foley placed for urinary retention 600cc retained
 - AM PTT
 - Contact PMD
- Coverage Team To-Do List:**
 - PA Transport for CT Head
 - Sz? Follow head CT read. If bleed, call neurosurg/family/attending.
 - f/u cultures
 - Follow up on PM lytes/labs. Replete as needed.
 - PM PTT
 - * pan culture, CXR if spikes
- Notes/Comments:**
 - negative mycoplasma
 - CT chest:
 - Findings:
Right-sided pacemaker with lead in the right ventricle. The patient is status post median sternotomy and CABG.
 - Evaluation of the lower neck and superior mediastinum are limited by the patient's body habitus. No significant axillary, mediastinal, or hilar lymphadenopathy is identified though evaluation is limited by the lack of intravenous contrast and body habitus. The heart is enlarged. No pericardial effusion is visualized. There are no pleural effusions.
- Discharge Planning:**
- Consultant Notes/Comments:**

Patient Benefits

- Decreased wait time for treatment
- Increased access/control over health information
- Increased use of best practices/decision support
- Increased ability to ask informed questions
- Quicker turnaround time for ordered treatments

Patient Benefits

- Greater clarity to discharge instruction
 - Increased responsibility for own care
 - Alerts and reminders for appointments and scheduled tests
 - Increased satisfaction and understanding of choices
-
- Issue: When a patient could access his/her own health information like in other online services ? (Pros, Cons)

* Data Ownership *

- Paper medical records are the property of the creators with full responsibilities: storage, accuracy
- Many providers share / update the same electronic data in many sites, who is the responsible owner in EHR?

Caregiver Resistance

- EHRs are perceived as lacking essential features and awkward/inconvenience to use
- Some people have been unable /unwilling to use computers !
- Professionals don't want to change their “familiar”, “traditional” practices
- Rather pay penalties than bear EHR implementing cost
- May even refuse patients
- Need “incentives”

Enabling Factors:

1. Comprehensiveness of information.
2. Duration of use and retention of data.
3. Degree of structure of data.
4. Ubiquity of access .

Fundamental Issues:

Data Validation:

- Range checks (out of range value)
- Pattern checks
- Computed checks(values have the correct mathematical relationship)
- Consistency checks
- Delta checks (large and unlikely differences between the values)
- Spelling checks

Fundamental Issues:

- **Data display:** Once stored in the computer, data can be presented in numerous formats for different purposes without further entry work

Summaries and Snapshots

The screenshot displays a patient summary for Vince Dayton, a 55-year-old male. The interface is organized into several sections:

- Problem List:** Diabetes mellitus - Type 2, Essential hypertension, Obesity, Hyperlipidemia.
- Chief Complaint:** Diabetes Follow-up.
- Medications:** hydrochlorothiazide (HYDRODIURIL) 25 MG tablet, metformin (GLUCOPHAGE-IR) 500 MG 24 hr tablet, lisinopril (PRINIVIL, ZESTROL) 5 MG tablet, simvastatin (ZOCOR) 10 MG tablet.
- Allergies:** PENICILLINS, Rash. Last Reviewed by on 1/20/1999 at.
- Immunizations/Injections:** Influenza (10/17/2011, 11/30/1998, 10/22/1997...), IPV23 (Pneumococcal polysaccharide) 0242001, Tetanus/Diphtheria (1/17/1992).
- Health Maintenance:** Colonoscopy (12/15/2006), Hgb A1c (Q 3mo) (3/14/2012), Influenza Vaccine (10/17/2012), Tetanus Immunization (12/16/2010).
- Care Team and Communications:** Referring Provider: No referring provider set. PCPs: Drew Walker, M.D. (General). Other Patient Care Team Members: None. Visit Treatment Team: Patsy Chng, M.D. (Endocrinologist), Lisa Connelly, RN-CH (Diabetes Educator). Recipients of Past Communications: None.

Dynamic Search

- Search tools help the physician to locate relevant data.
- The EHR can then display these data as specialized presentation formats (e.g., flowsheets or graphics).

Fundamental issues:

Query and Surveillance Systems

- Find records of patients that satisfy pre-specified criteria and export selected data.
- Clinical care
- Clinical research
- Quality reporting
- Retrospective studies
- Administration (e.g. resource consumption)

EHR Adoption in Saudi Arabia

- Eastern Province study (Bah, Alharthi, El Mhalli, 2011).

- level of EHR functions (Mahalli ,2015).

Barriers of EHR in Saudi Arabia:

1. Human Barriers:

- Lack of
 - awareness of the importance and benefits of EHR,
 - knowledge and experience of using EHRs,
 - experience of computer applications .
- Negative beliefs and impressions about EHRs and about their ability to use EHRs

2. Financial Barriers:

- High initial cost of EHRs implementation.
- High operation and maintenance costs of EHRs.
- Lack of feasibility studies that show the benefits versus costs of implementing and using EHRs.

Barriers of EHR in Saudi Arabia:

3. Legal and regulatory barriers:

- Lack of policies that govern EHRs on both hospital and national levels.
- Using EHRs may threaten confidentiality of health information.

4. Organizational barriers:

- Workflow needs redesign to match with EHRs.
- Hospital management doesn't have the necessary experience to choose & implement the best EHRs.
- Hospital management doesn't provide the necessary training for the staff on using EHRs.

Barriers of EHR in Saudi Arabia:

5. Technical barriers:

- Computers and networks have a lot of maintenance problems.
- EHRs are not satisfying different users' needs.
- The main difficulty with EHRs is data entry and data retrieval.

6. Professional barriers:

- Lack of motivation to learn and train on using EHRs.
- EHRs slows down work/decreases productivity.

Future Trends of EHR:

Patient access will increase,

Cloud technology for EHR.

Movement toward a nationalized database.

Mobile accessibility.
