

# How to Conduct a Literature Search

Dr Rufaidah Al Dabbagh, MBBS, DrPH

Dr Hani Al Ghamdi, MBBS, MPH

Family & Community Medicine Department

Thu, 28/9/2017

# Outline

2

- What is a literature review
- What is a literature search
- Why do we do literature reviews
- The common literature databases
- How to conduct the search
- How to focus your search and apply limits
- Practical Example

# What is a literature review?

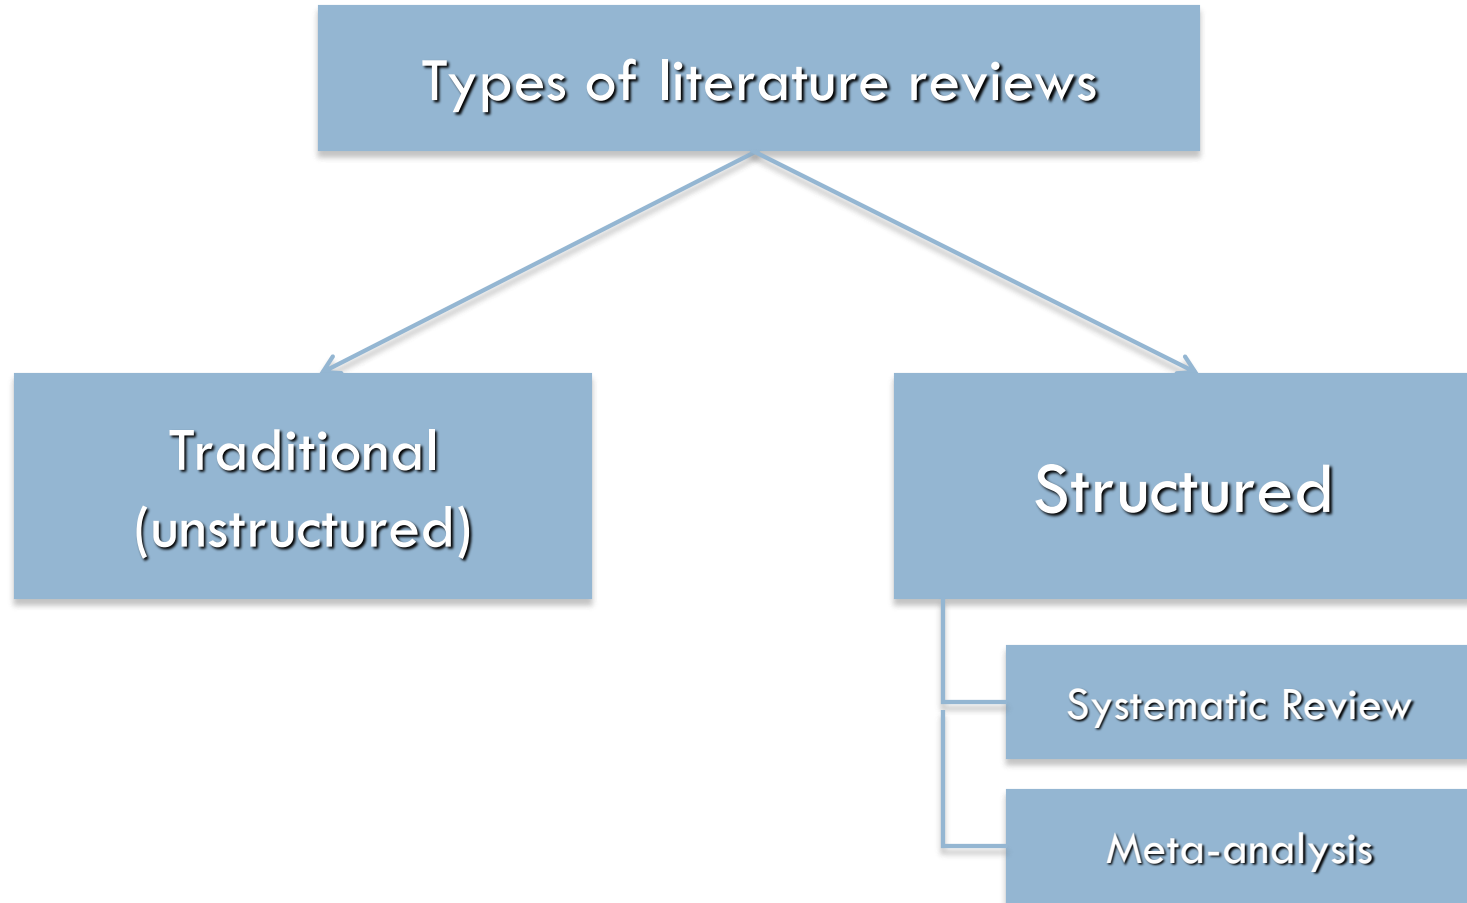

3

- It is an objective summary and critical analysis of all available research (**and non-research**) literature on the topic being studied

# Types of literature reviews

4

# What is a literature search?

5

- “A systematic and thorough search of published literature in order to collect information about a particular topic” \*
- Note that **literature search** is different from the **literature review**
- It is the means that we use in order to collect the appropriate data we want to include in our literature review

# Why do we search the literature?

6

- ❑ To advance our medical knowledge
- ❑ For clinicians to answer questions about the best treatment
- ❑ Stimulates us to develop new research ideas through identifying gaps in knowledge
- ❑ Differentiate what **has been done** vs. what needs to be done
- ❑ Helps us learn about the newest developments in our area of research (and worldwide experts)
- ❑ To prepare a literature review for our project

# Where do we start?

7

- Scientific databases
- Other search engines
- Journal databases (sometimes not indexed e.g. Ann Saudi Med, Saudi Med J....etc.)
- Books
- Governmental websites (e.g. unpublished estimates from the Ministry of Health)
- WHO

# Examples of search engines

8

Google™

YAHOO!®

msn.™

AOL.

Ask Jeeves®  
Ask.com

alltheweb  
• • • find it all • • •

altavista™

# Examples of scientific databases

9

## General:

- PubMed/Medline
- Clinical Evidence
- Cochrane
- Best Evidence
- Best Treatment
- Trip database
- Bandolier

## EBM Guidelines:

- NICE
- PRODIGY
- SIGN
- Others

# More databases

10

- **CINAHL** - Cum. Index to Nursing and Allied Health Literature
  - <http://www.cinahl.com>
- **ERIC** – Education Resources Information Center
  - <http://www.eric.ed.gov>
- **PsycINFO** – A database of American Psychological Association
  - <http://www.apa.org/psycinfo>
- **Campbell Collaboration**
  - <http://www.campbellcollaboration.org>
- **BEME** - Best Evidence Medical Education
  - [www.bemecollaboration.org](http://www.bemecollaboration.org)

# Regional and local databases

11

- Index Medicus of the Eastern Mediterranean Region
  - <http://www.emro.who.int/information-resources/imemr-database/>
- Saudi Medical Literature:
  - <http://saudimedlit.librarynwafh.com/index.html>

# Evidence Based Guidelines

12

- NICE - National Institute for Health and Clinical Excellence
  - <http://www.nice.org.uk>
- PRODIGY - formerly CKS
  - <http://prodigy.clarity.co.uk/home>
- NGC - National Guideline Clearinghouse
  - <http://guideline.gov/>
- SIGN - Scottish Intercollegiate Guidelines Network
  - <http://www.sign.ac.uk/index.html>

# Start broad then refine your search

13

- Internet search/Any search engine
  - Guidelines review
- } General overview
- ↓ ↑
- Database search – Medline/PsycINFO
  - Reference tracking-references in articles
- } Thorough search
- ↓ ↑
- Use limits and boolean operators
  - Expert contacts
- } Refining

# Tips to optimize your search

14

- Well formulate your research question
- Decide what the criteria are for including or excluding the studies in your review
  - ▣ *English articles; age group? Gender? Exclude other conditions? region? country? ....etc.*
- Specify what sort of information you are searching for
  - ▣ *methods? outcomes? epidemiologic? intervention?*
- Having an outline for your literature review will help guide your literature search

# What are Medline and PubMed?

15

- **PubMed** is a database developed by the National Center for Biotechnology Information (NCBI) at the National Library of Medicine (**NLM**) available on the Web.
- **NLM** is the worlds largest medical library
- **NLM** has been indexing the biomedical literature since 1879
- **MEDLINE** is a database of indexes (with citations and abstracts)
- Since 1996, Medline is accessed for free through **PubMed**
- **PubMed** database is more current and comprehensive than **MEDLINE** ( it includes citations even prior to their indexing with **MEDLINE**)

# Practical example for searching through Medline

# Formulate your research question

17

- For example, you are interested in learning about the association between TB and DM in Saudi Arabia, and you believe (based on previous knowledge) that DM may increase the risk of TB. However, what does it do to seropositivity?
- Research question:  
How does DM influence seropositivity of TB in the Saudi population?

# Decide what keywords to use

18

- Keywords are the words you will use in the search engine query box
- Published work that is available in Pubmed (and other databases) uses key words to index the articles
- It is wise to think of the key words that will give you coverage of what you are searching for
- “Type II DM”, “TB”, “Saudi Arabia”, “seropositivity”,
  - ▣ To see what has already been done first

# Accessing Medline through SDL

19

### The Saudi Digital Library Signs Agreements with Governmental Universities 429 Views

3 May 2017 1:52 PM

A number of Saudi government universities have recently signed agreements to join the Saudi Digital Library (SDL) in a bid to ensure its diverse digital databases are available directly to all their employees, students, and faculty

### Math Science - MathSciNet - AMS

MathSciNet® is an electronic publication offering access to a carefully maintained and easily searchable database of reviews, abstracts and bibliographic information for much of the mathematical sciences literature. Over 100,000 new items are added each year, most of them classified according to the Mathematics Subject Classification.

### Medical Evidence Matters - ProQuest

Medical Evidence Matters is an online healthcare knowledge management system to assist decision makers in their treatment choices for patients. The main goal is to provide quick and easy access to evidence extracted from research articles on particular topics.

### Medline complete - EBSCO

MEDLINE provides authoritative medical information on medicine, nursing, dentistry, veterinary medicine, the health care system, pre-clinical sciences, and much more. Created by the National Library of Medicine.

### Medline Index - ProQuest

This database is a comprehensive collection of journals covering clinical

Am I using the right keyword?

How can I make sure I'm not missing anything?

# MeSH

35

- Medical subject headings (MeSH) is the database that uses hierarchy to index citations.
- This means that the database already has a created library of terms related to the term entered in the query box.
- This is usually arranged in hierarchy, from more general and broad term, to more specific term.
- This makes it easy for the searcher to catch all articles possibly related to the term entered in the query box. (automatic term explosion)
- It also helps you trace articles that have the EXACT word you are looking for.

Database: MEDLINE Complete ?

3. Diabetes mellitus among tuberculosis patients: a cross sectional study from Pakistan.

(English) ; Abstract available. By: Tahir Z; Ahmad MU; Akhtar AM; Yaqub T; Mushtaq MH; Javed H, African Health Sciences [Afr Health Sci], ISSN: 1720-0502, 2016 Sep; Vol. 16 (2), pp. 671-676; Publisher: Faculty of Medicine, Makerere University; PMID: 27017108

# Other helpful resources

39

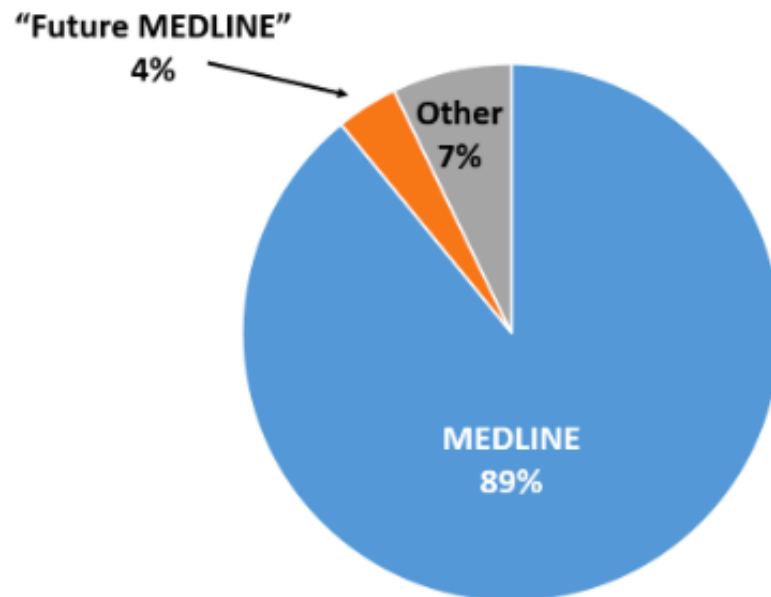

- Try other search databases (Ovid, Science direct...all are available on SDL)
- **PubMed** is more comprehensive than Medline (you may want to look into PubMed)
- Search for tutorials on different databases

# Items Included in PubMed

40

- 27 M articles from biomedical literature
- Some books from NCBI database
- journals directly from the publisher but not indexed in Medline yet
- Old articles that are not indexed in Medline

# Let's apply what we learned to PubMed

41

- <https://www.ncbi.nlm.nih.gov/pubmed/>

## PubMed

PubMed comprises more than 27 million citations for biomedical literature from MEDLINE, life science journals, and online books. Citations may include links to full-text content from PubMed Central and publisher web sites.

### PubMed Overview

- NLM has been indexing the biomedical literature since 1879, to help provide health professionals access to information necessary for research, health care, and education.
- What was once a printed index to articles, the *Index Medicus*, became a database now known as MEDLINE. MEDLINE contains journal citations and abstracts for biomedical literature from around the world.
- Since 1996, free access to MEDLINE has been available to the public online via PubMed.

# Evidence-based Medicine Database

57

- Cochrane Library:
  - <http://www.cochranelibrary.com>
  
- What is it?
  - A database for high-quality independent evidence that helps inform healthcare decision making
  
- How to use Cochrane:
  - <http://www.cochranelibrary.com/help/how-to-use-cochrane-library.html>
  - This same page has helpful video tutorials

Library. Sessions are conducted using WebEx, an online conferencing system that allows you to view live presentations from your desktop. All you need is an internet connection and access to a telephone. Training is offered completely free of charge and we will provide a toll free number to dial in.

Go to [wiley-onlinelibrary.webex.com](http://wiley-onlinelibrary.webex.com) to view the current schedule.

### Online self-paced tutorials

These online tutorials were designed for users as a quick and informative overview and demonstration of the Cochrane Library. The tutorials provide an introduction to the Cochrane Library and how to browse and search the Cochrane Library.

**Part 1 - An introduction to the Cochrane Library**

**Part 2 - Browsing and Searching the Cochrane Library**

**Part 3 - Using MeSH and Search Manager**

### Databases -Additional information

Additional information is available for the **Cochrane Central Register of Controlled Trials** (CENTRAL; Clinical Trials) and the **Cochrane Methodology Register** (CMR; Methods Studies).

### The Anywhere Systematic Review

'Any format, any device, any time'

Today, more than ever, we need access to information that is immediate, clear and communicable. As a member of the scientific community we serve, you will know how important it is to have access to that data. **Anywhere Systematic Review** is available whenever you need it, and wherever you are.

No time to read Cochrane Reviews? Think again.

# In Summary

59

- Literature search is a means to allow us to conduct a literature review
- Well focused questions, keywords, and criteria for search make the search more successful and time efficient
- Use search limits, MeSH terms and boolean operators to refine your search
- Don't be shy to ask experienced professionals for advice when needed
