

# Global Health Programs & Policies

**Dr. Shady Kamel**

MD, Msc. CIC

Preventive Medicine and Public Health Consultant

Field epidemiology training program (FETP),

Ministry of Health (MOH), KSA

# Objectives

- **Candidates should be able to:**
  - **Define Health policy**
  - **Differentiate between Macro- and Micro- Policies**
  - **Enumerate the uses of health policies**
  - **Understand the policy formulation process**
  - **Understand, describe major global health policies**

# Africa

# is Far !

**So “Global” means what?**

# Global Health

# Definition of Global Health

- “The area of study, research and practice that places a priority on improving health and achieving equity in health for all people worldwide”

Koplan JP, Bond TC, Merson MH, et al. (June 2009). "Towards a common definition of global health". *Lancet*. 373 (9679): 1993–5. doi:10.1016/S0140-6736(09)60332-9. PMID 19493564.

# CDC's Perspective on Global Health

- **A disease threat anywhere is a disease threat everywhere.**
- **CDC's global health mission is to improve the health, safety, and security of Americans while reducing morbidity and mortality worldwide.**

<https://www.cdc.gov/globalhealth/index.html>

- **CDC's global health strategy is a world where people live healthier, safer, and longer lives through science, policy, partnership, and evidence-based public health action.**

[https://www.cdc.gov/globalhealth/strategy/pdf/cgh\\_strategy\\_overview.pdf](https://www.cdc.gov/globalhealth/strategy/pdf/cgh_strategy_overview.pdf)

- CDC's global health **strategy** is a world where people live healthier, safer, and longer lives through science, **policy**, partnership, and **evidence**-based **public** health action.

[https://www.cdc.gov/globalhealth/strategy/pdf/cgh\\_strategy\\_overview.pdf](https://www.cdc.gov/globalhealth/strategy/pdf/cgh_strategy_overview.pdf)

# Scope

- **Prevention and control of disease**
- **Development of comprehensive health services**
- **Family health**
- **Environmental health**
- **Health statistics**
- **Bio-medical research**

WHO(1979).WHO Chronicle,33:233

# Policies

# Definition of a policy

- **A policy is a set of coherent decisions with a common long-term purpose(s).**
- **Health policy refers to decisions, plans, and actions that are undertaken to achieve specific health care goals within a society.**

[https://www.who.int/topics/health\\_policy/en/](https://www.who.int/topics/health_policy/en/)

# Factors involved in making a policy

- **Socioeconomic status**
- **Social**
- **Physical environments**
- **Access to medical services**
- **Lifestyle behaviors**

# Types of Policies

- **Macro Policy** is policy which affects the whole country [or region].
- **Micro Policy** is policy which affects the individuals[or group].

# Uses of Policy

- **Defines a vision for the future**
- **Helps to establish targets**
- **Outlines priorities**
- **Points of reference for the short and medium term.**
- **Shows the expected roles of different groups**
- **Builds consensus**
- **Informs people**

# Steps for development of a policy

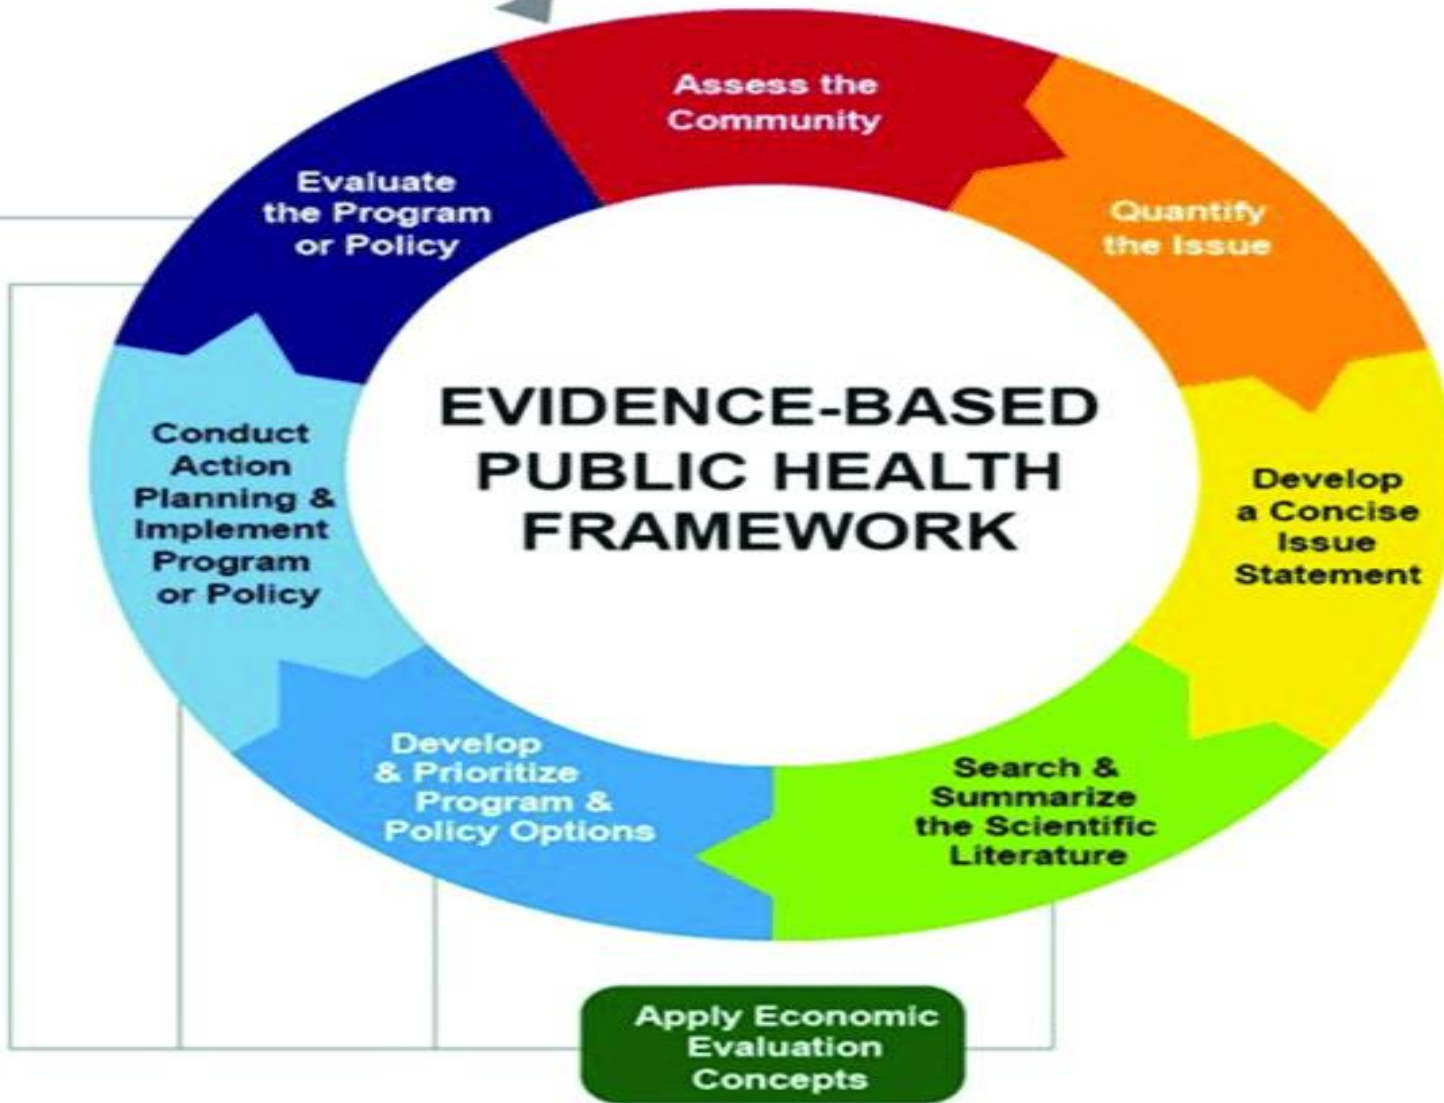

- **Assessment of the health problem in the community**
- **Quantify the health problem**
- **Develop a statement of the health problem**
- **Review the literature**
- **Determine and prioritize programs and policies**
- **Implement chosen program**
- **Evaluate program and policy**

Issue of Focus

Disseminate Widely  
Retool  
Discontinue

Programs

Procedures

Issue of Focus

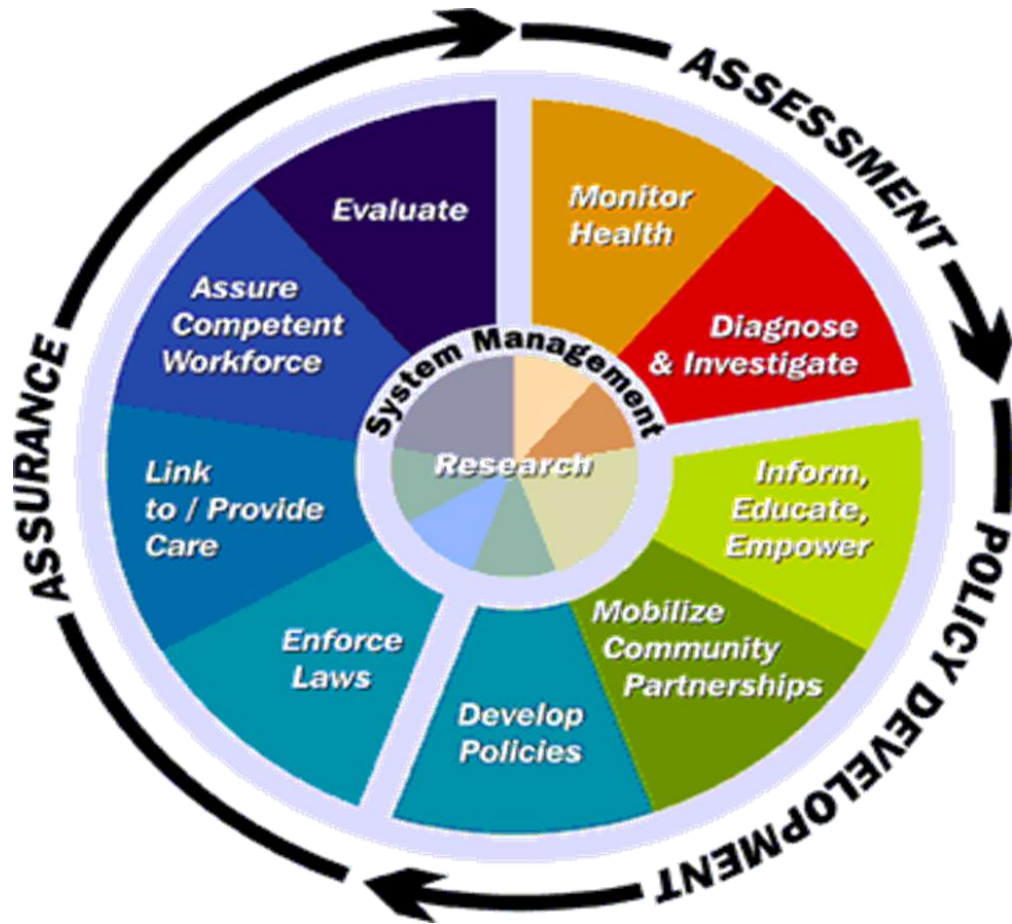

Strategies

Policies

Programs

Procedures

# Essential Public Health Services

Grouped under 3 categories:

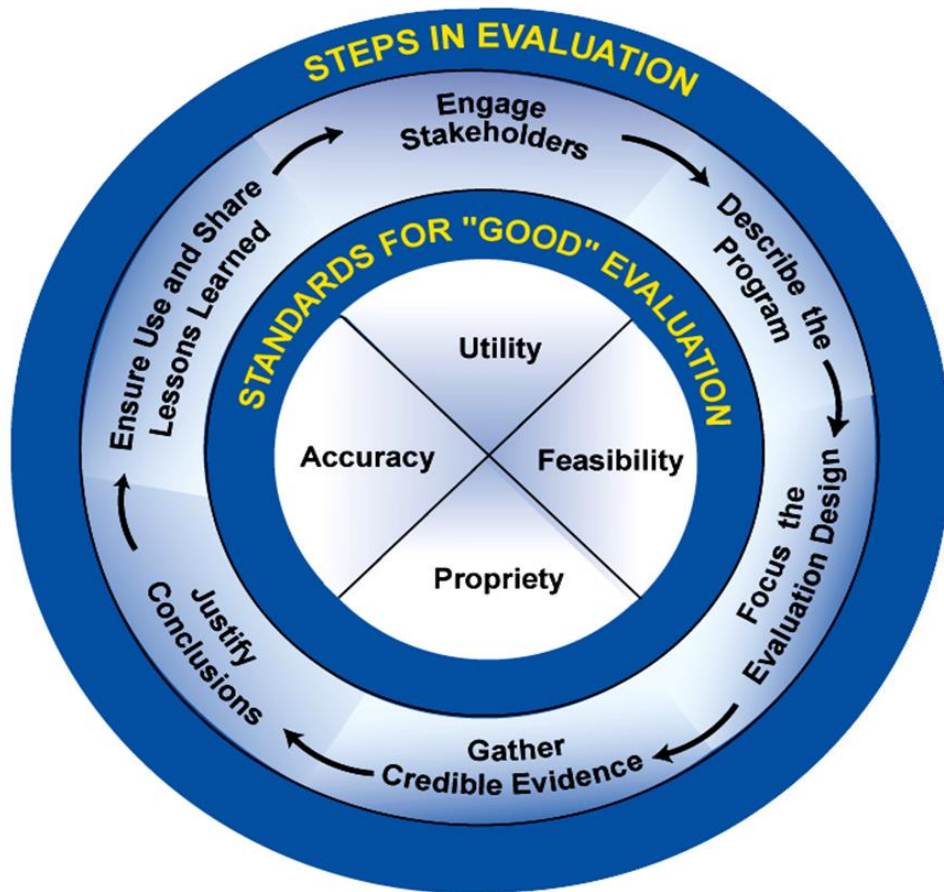

- Assessment
- Policy Development
- Assurance

Grouped under 3 categories:

- Assessment
- Policy Development
- Assurance

# Program evaluation

6 Steps

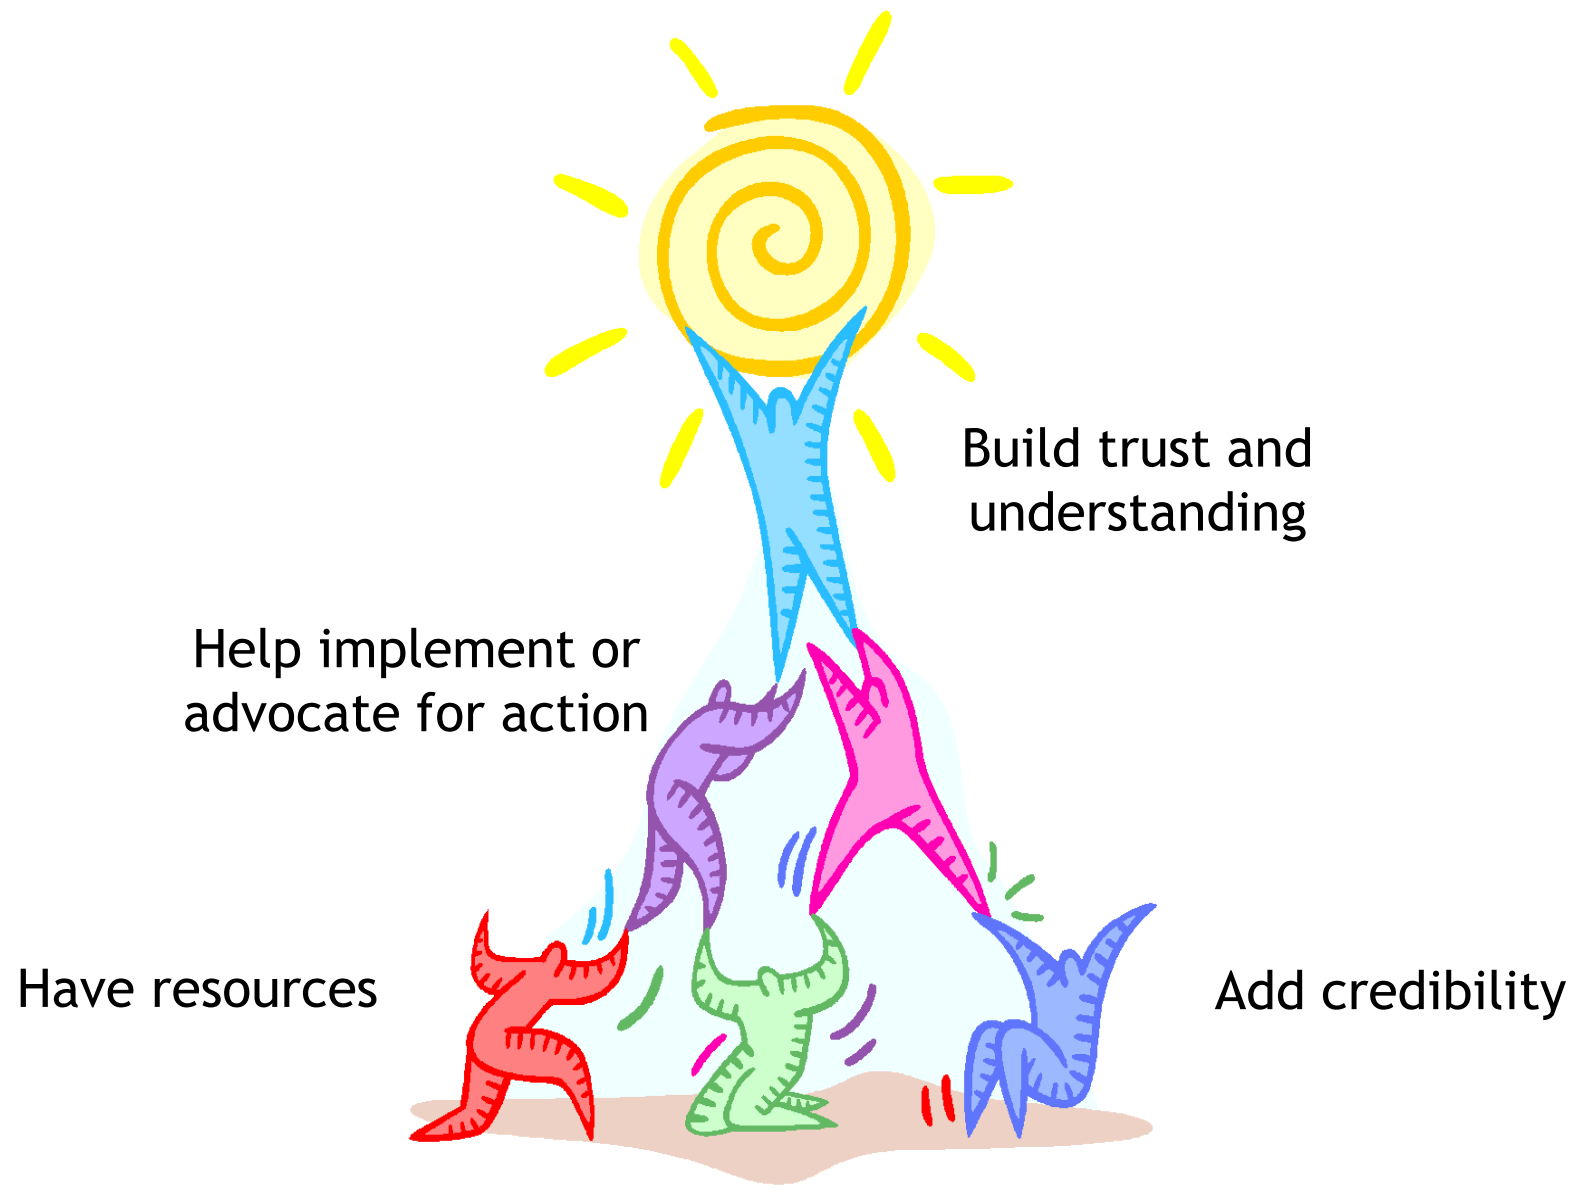

4 Standards

# Standards

- **Utility: Useful to intended users**
- **Feasibility: Effective, efficient, practical**
- **Propriety: Fair, ethical, legal, transparent**
- **Accuracy: Truthful, dependable**

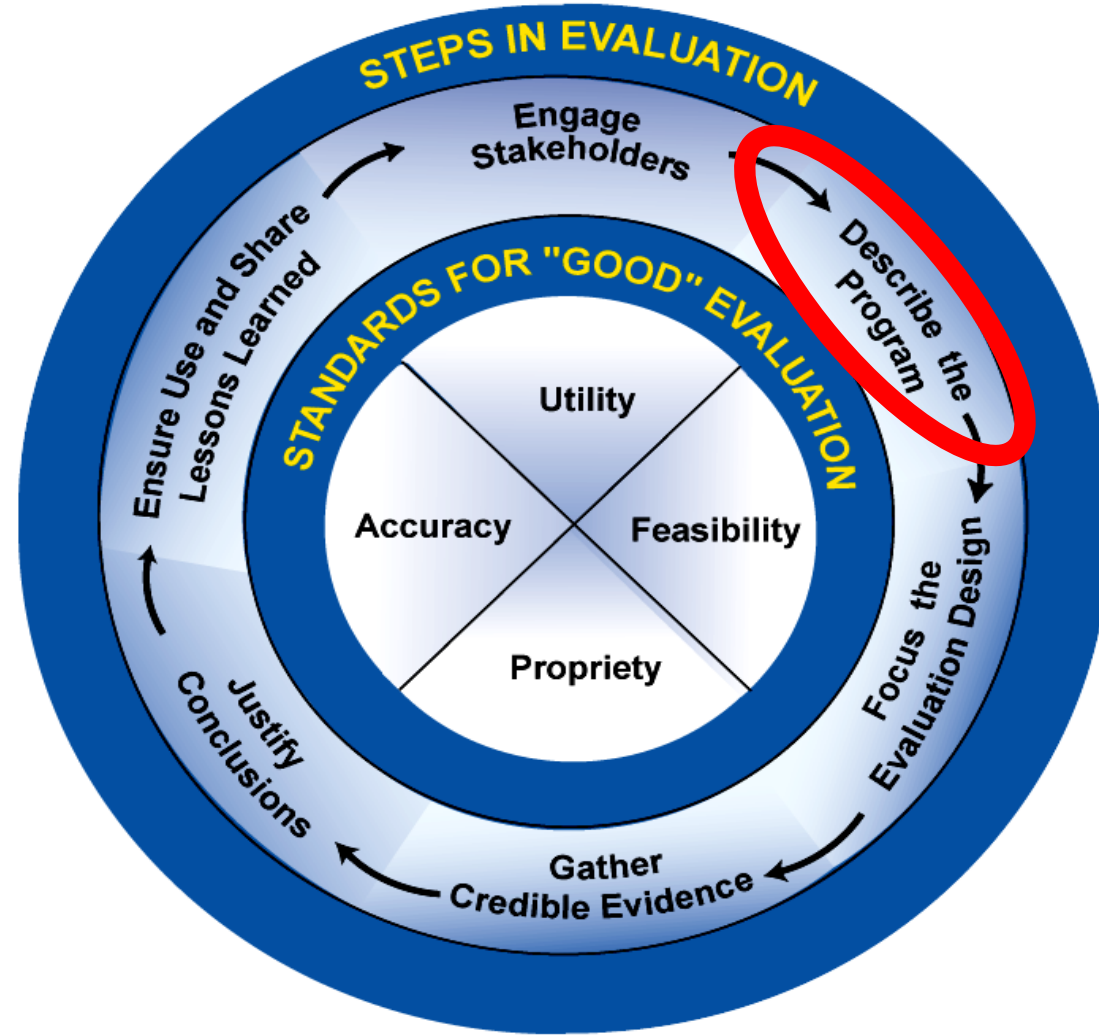

1

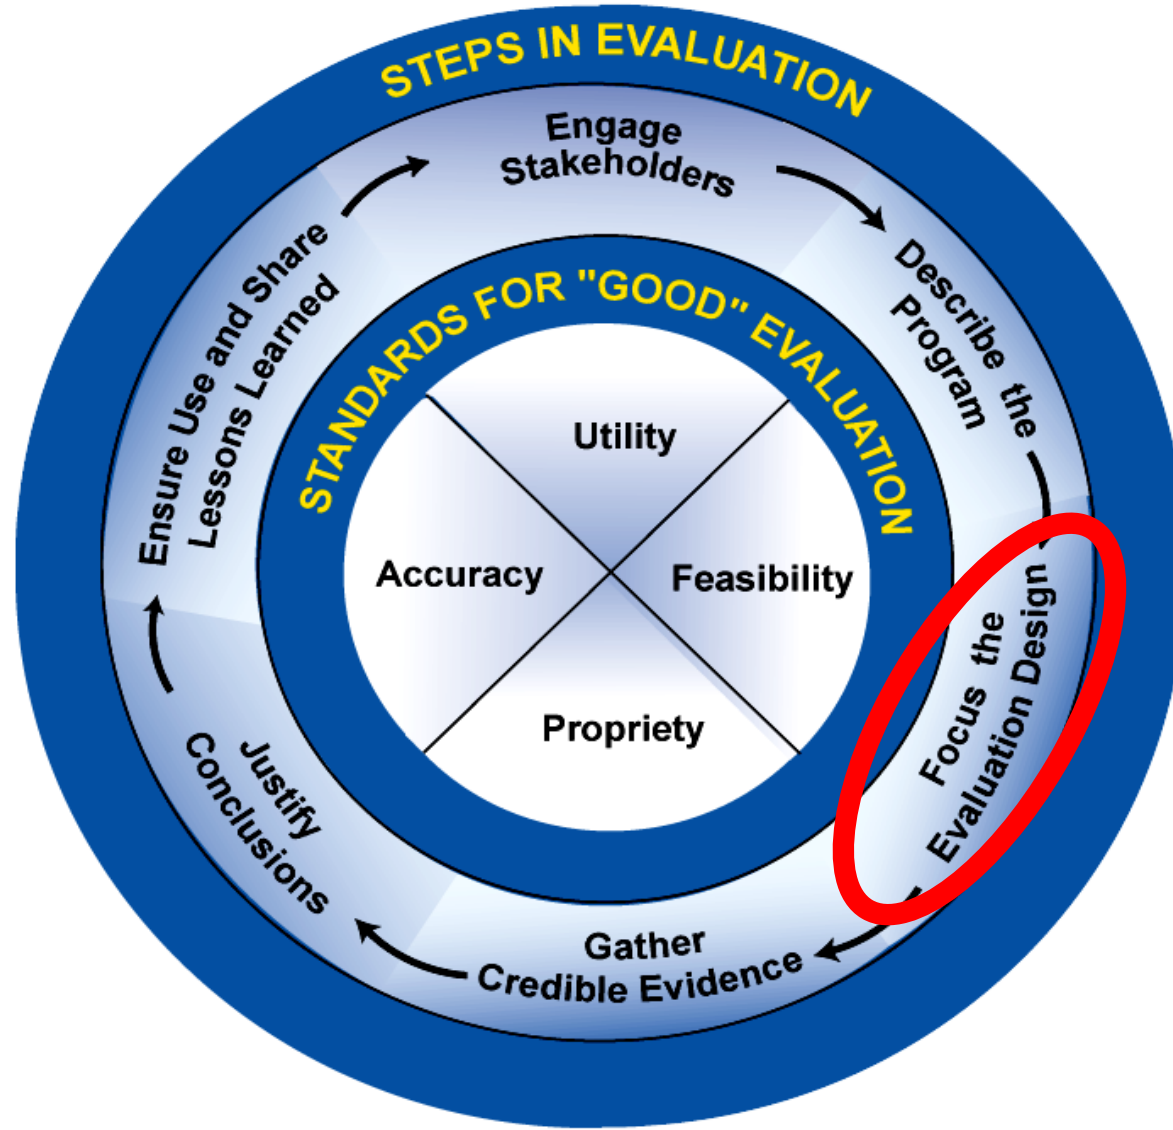

2

# Describe the Program

- Document program need/justification
- State program expectations/objectives
- Identify program activities
- Determine program resources
- Consider program development context/background

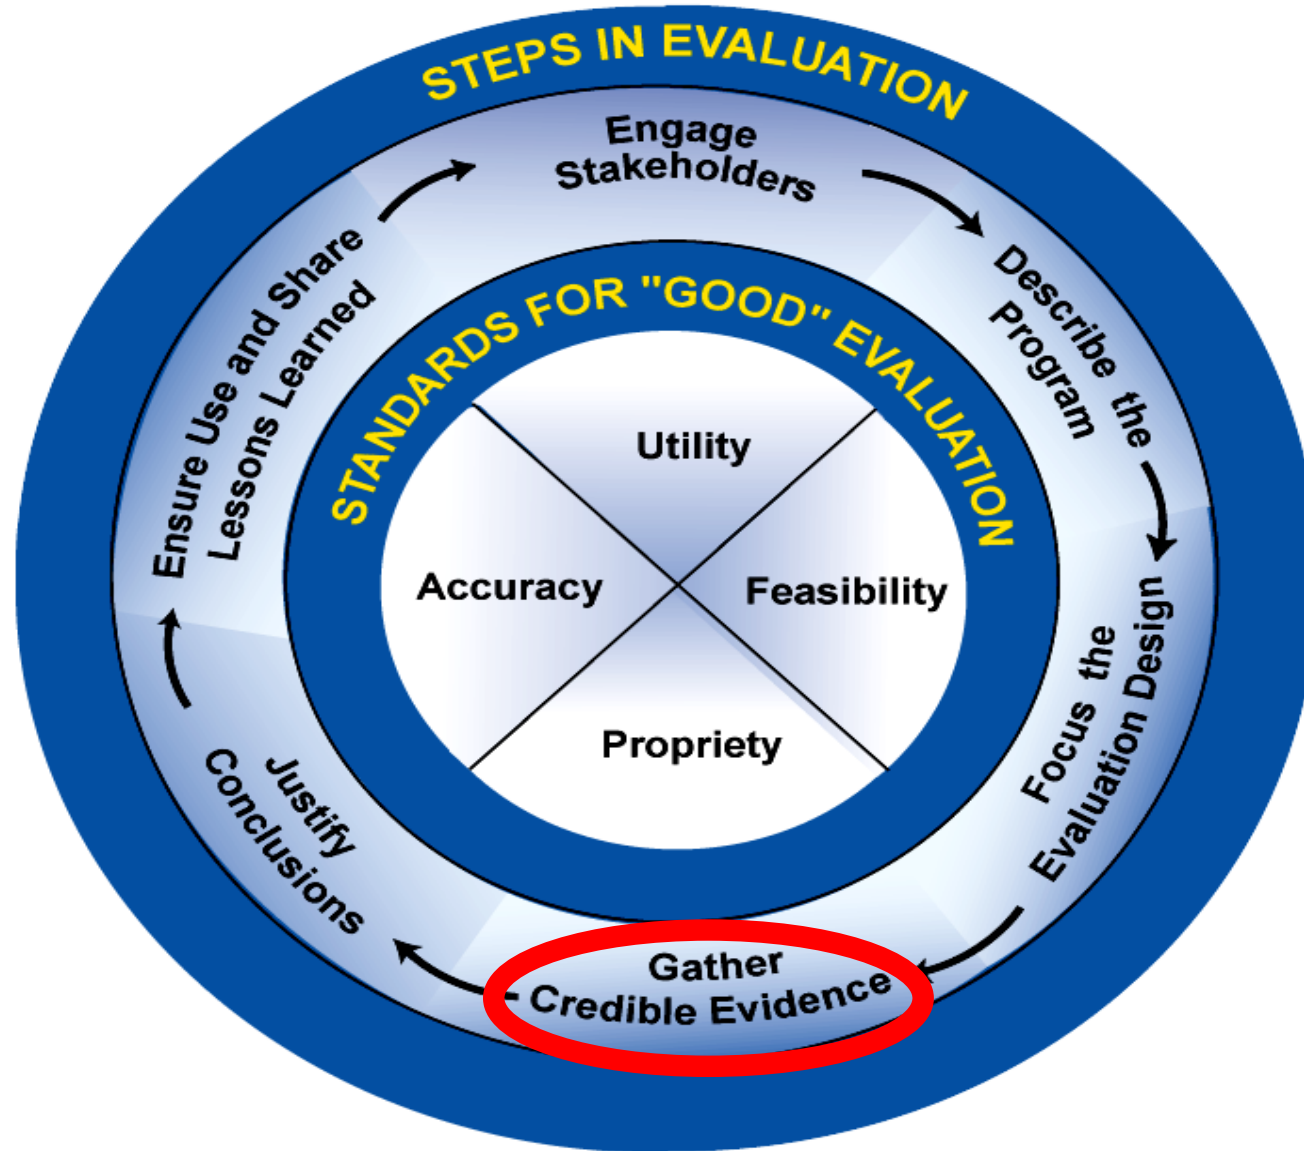

3

# Determine the Purpose

- **Gain insight**
  - Identify benefits and barriers
- **Change practice**
  - Improve the content of educational materials
- **Assess effects**
  - Assess skill development by participants
- **Affect participants**
  - Reinforce intervention messages

4

# Gather Credible Evidence

- Information must be trustworthy and relevant.
- When stakeholders find evaluation data to be credible, they are more likely to accept the findings and act on the recommendations.
- SMART

5

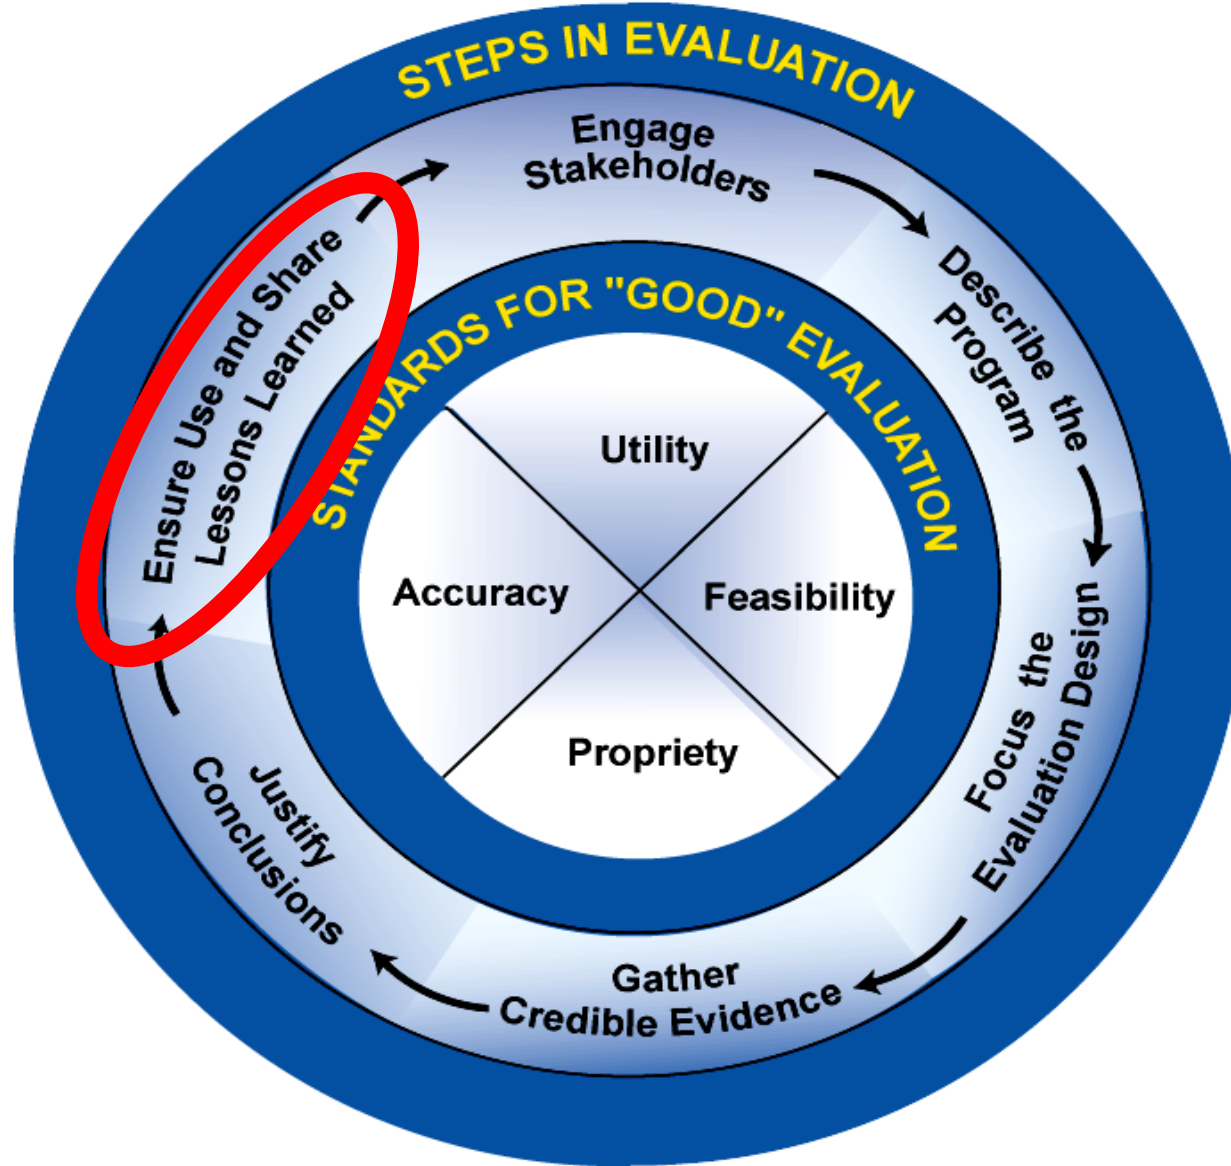

# Justify Conclusions

- Determine Benchmarks / Targets
- Analyze Data
- Interpret Findings
- Make Judgments
- Make Recommendations

6

# Ensure Use and Share Lessons Learned

- Prepare reports for audiences
- Present clear results
- Summarize stakeholder's role
- Explain evaluation methods
- Identify strengths and weaknesses
- Include reasonable recommendations
- Keep it simple
- Use examples

# Examples of Global health Activities

- **Global Health Security Agenda**
- **Joint External Evaluations**
- **International Health regulations**
- **Public Health Emergency of International Concern**

# Global Health Security Agenda (GHSA)

- **Launched in 2014**
- **Partnership between 64 countries, international organizations, NGOs, to build capacity to detect, respond, and prevent outbreaks in humans and animals**
  - **Natural or deliberate**

# GHSA

- **Global health security comes from collaboration between health, security, environment, agricultural sectors**
- **Relies on Joint External Evaluations to assess a country's capacity to detect, respond, prevent disease outbreaks in humans and animals**

# Joint External Evaluation (JEE)

- **Multisectoral process, external reviewers**
- **Human health, animal health, environmental health**
- **Saudi Arabia's published in 2017:**

<https://www.who.int/ihr/publications/WHO-WHE-CPI-2017.25.report/en/>

# International Health Regulations

- **International, legal agreement**
- **Binding on 196 countries, including KSA**
- **Designed to prevent, respond to acute outbreaks that pose international threat**

# Required to report to WHO

- **Polio (wild type), smallpox, SARS, human influenza of a new subtype – immediately reported to WHO**
- **“Events involving epidemic-prone diseases”**

# Challenges with IHR

- **Most conditions not required to be reported to WHO**
  - Countries do not always report dengue, zika, cholera.
- **Regulations not specific**
  - Consider: for the Ebola outbreak in 2014-2015, IHR exit screening protocol required a “questionnaire”, but not what had to be in the questionnaire. They could have asked about what people ate for lunch and it would have met IHR standards.
- **No real way to enforce IHR**
  - No way to punish countries who violate IHR

# Public Health Emergency of International Concern (PHEIC)

- “An extraordinary event”
- Two criterion:
  1. It constitutes a public health risk to other States through the international spread of disease; and
  2. It could require a coordinated international response

# Recent PHEICs

- **Zika Virus - 2016**
- **Ebola, West Africa, 2014-2015**
- **Polio – 2014**
- **H1N1 influenza - 2009**

Why does the world not decide to completely cut off access to a country during an outbreak?

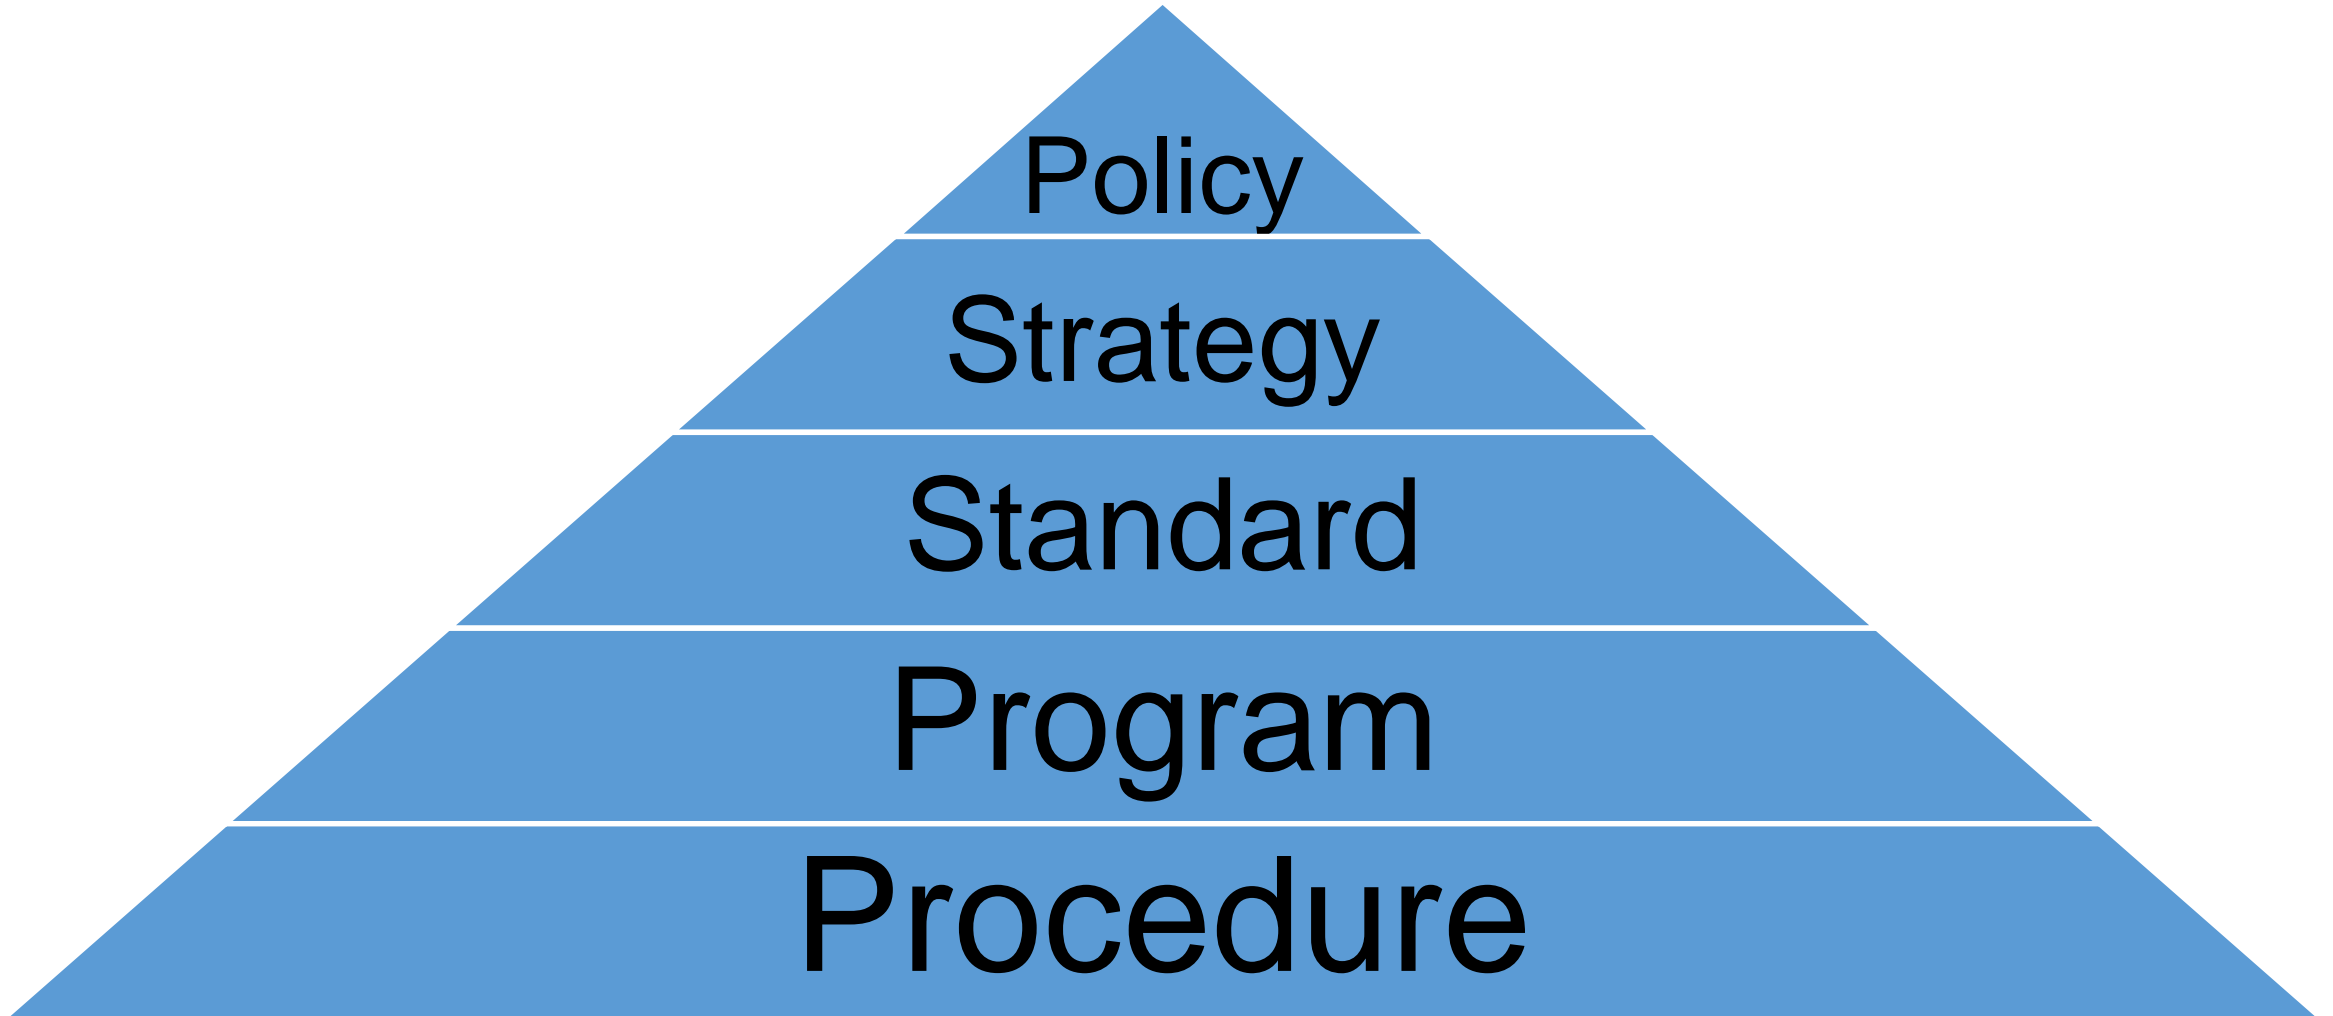

# Impact of Quarantine

- **Closing borders with West African countries would have led to thousands of additional deaths**
  - Countries import 50% of their food
  - No access to medical care
- **Not going to be successful – no country has truly closed borders**
  - Drives disease, cases underground

# Global Health in Action

- **Vaccines are a government policy that affects people at a personal level:**
  - Travelers to KSA for Hajj are required to have certain vaccinations
  - Travelers through/from certain countries required to have Yellow Fever vaccination when coming to KSA

# Summary

**Policy: Long-term decisions**

**Strategy: Long-term plan**

**Standard: Level of Quality**

**Program: Short-term intervention**

**Procedure: Set of actions**
