

Diabetic Nephropathy

Dr. Mohammad Alkhawaiter, MD
Consultant Nephrologist

Outline

- Definition
- Importance/Epidemiology
- Pathogenesis
- Natural History
- Risk factors and prevention
- Treatment strategies

Definition

- ***Diabetic nephropathy:***
 - Functional and structural renal changes that happen in the context of Diabetes mellitus.
- ***Functional:***
 - Albuminuria
 - Progressive loss of renal function
- ***Structural:***
 - Mesangial expansion, GBM thickening and glomerulosclerosis

Definition

- Albuminuria = $> 300 \text{ mg/d}$
- Microalbuminuria = $30-300 \text{ mg/d}$
 - ACR $> 3 \text{ mg/mmol creatinine}$

Importance

- The leading cause of ESRD in our society

أسباب الفشل الكلوي النهائي عند مرضى التنقية الدموية
بيانات نهاية عام 2015 م

SCOT 2015

النسبة المئوية%	العدد	سبب الفشل الكلوي
39%	6081	اعتلال كلوي بارتفاع ضغط الدم
<u>38.8%</u>	6055	اعتلال كلوي بداء السكري
7.4%	1158	مجهول السبب
3.7%	570	اعتلال كبيبات الكلي البديهي
2%	364	اعتلال كلوي إنسدادي
2%	259	التهاب الأوعية
1.7%	270	الأفات الكلوية الوراثية
1.4%	214	تشوهات خلقية
1%	129	اعتلال أنبوبي خلالي مزمن
0.5%	74	عواقب الحمل
2.5%	416	أخرى
100%	15590	المجموع

انتشار داء السكري وإرتفاع ضغط الدم عند مرضى التنقية الدموية بيانات نهاية عام 2015

Importance

- Diabetic nephropathy is a risk factor for cardiovascular disease

Importance

- Prevalence of Diabetes in Saudi Arabia:
 - 23.7% DM
 - 14.1 % impaired fasting glucose
 - In total 37.8% have abnormal glucose metabolism (age 30-70 year)

Epidemic

Alnozha et al, Saudi Med J 2004, 25(11): 1603–10.

Prevalence of Diabetic Nephropathy in Type II

- 11.5% in UK
- 42.9% in Thailand
- ***Saudi Arabia:***
 - **10.8%**
the Saudi National Diabetes Registry (SNDR), Al-Rubeaan et al 2014.
 - **31.8%**
Alwakeel et al, Ann Saudi Med 2011; 31(3): 236–242.

- ESRD in DM II:
- - **1.5% of type II DM**

the Saudi National Diabetes Registry (SNDR), Al-Rubeaan et al 2014.

- **5% of type II DM**

Alwakeel et al, Ann Saudi Med 2011; 31(3): 236–242.

- Type 2
 - 10 years: 25% MA, 5% proteinuria and 0.8% $\text{Cr} \geq 175$ or renal replacement therapy
- Adler AI, et al. Kidney Int 2003; 63:225.
- Type 1
 - 7-10% → ESRD after 20-30 year

Pathophysiology

- Hyperfiltration
- Hyperglycemia and AGEs (advanced glycation end products)
- Hyperglycemia Increases VEGF expression (vascular endothelial growth factor)
- Hyperglycemia increases the expression of transforming growth factor-beta (TGF-beta)

Risk Factors

- Duration of DM
- Age
- HTN
- Race
- Genetic factor
- Retinopathy
- Smoking, Hyperlipidemia
- Poor Glycemic control

Diabetic Nephropathy and Retinopathy

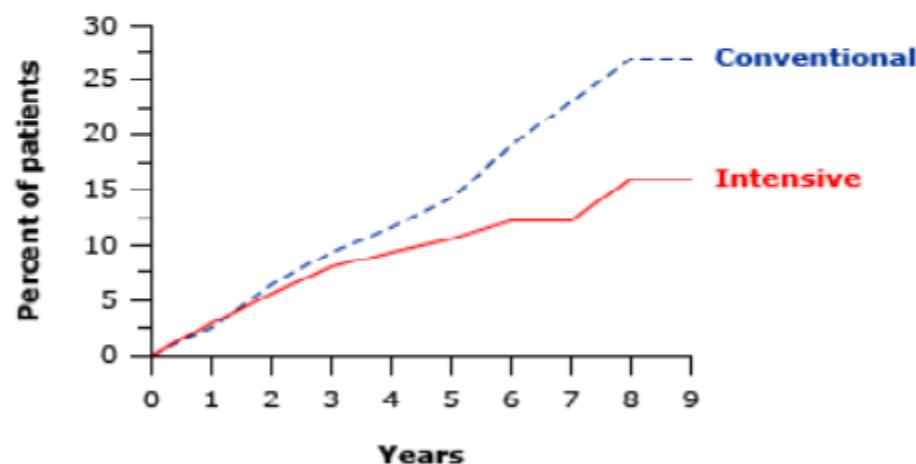

- In Type I DM
- In Type II DM

Treatment Strategies

- Good BP control
 - BP <130/80
- Good glycemic control
 - HgbA₁C <7 %
- Lipid lowering agnt
 - LDL-C <2.0 mmol/L
- RAS blockade, independent of BP
- Diet (protein, sodium)

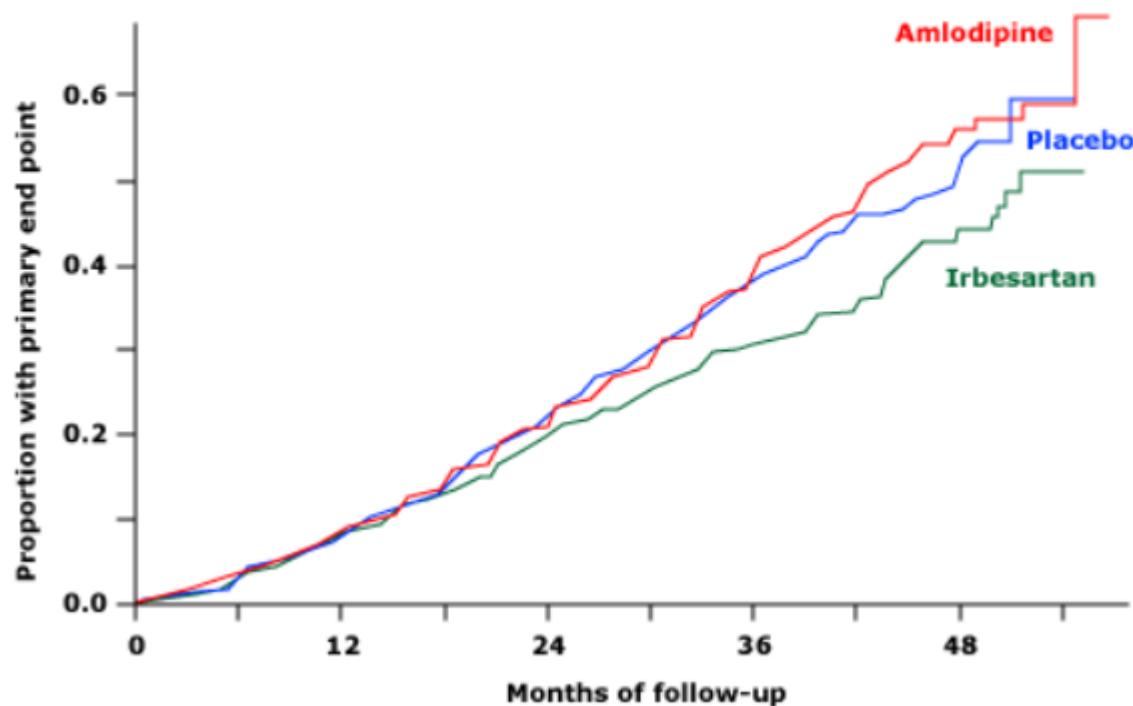

GRAPHICS

Strict glycemic control prevents moderately increased albuminuria (formerly called microalbuminuria) in patients with type 1 diabetes mellitus

The Diabetes Control and Complications Trial
Research Group. N Engl J Med 1993

Irbesartan slows progression of nephropathy in type 2 diabetes
