

Qualitative Research

Noura A. Abouammoh, MBBS,MPH,PHD

Department of Family and Community Medicine

Collage of Medicine

King Saud University

Overview of the presentation

- What is qualitative research?
- Uses of qualitative methods in health research
- Compare qualitative with quantitative approach
- Major qualitative data collection methods: interviews, focus groups, observations
- Overview of qualitative data analysis

Introduction

- What is research?

Systematic approach

General classification of types of research methods

Quantitative research

Qualitative research

Newton's apple

Everything that can be counted does not necessarily count; everything that counts cannot necessarily be counted.

(Albert Einstein)

Example

- 81% of deaths in the hospitals are due to RTAs
- 20% of hospital beds are occupied by RTA victims
- Excessive speeding is the most common reported cause of RTAs
- The young and economically productive age groups are the most affected
- The reported gross loss due to accidents is between 2.2 - 9 %

The magnitude of the problem

SAHER system to reduce RTAs in KSA

- SAHER
- Recognize

How can I reduce RTAs ?

- Why do people speed?
- Why do people cross red lights?

Consider these questions

- Why do people smoke ?
- Why do people eat what they eat ?
- Why don't most people in our part of the world exercise ?
- How do people contract infection ?
- How is such information useful ?

What is qualitative research?

- A strategy for systematic collection, organization and interpretation of textual information.
- Answers how and why a certain phenomenon occurs.
- Uses inductive approach to generate novel insights into phenomena

Why qualitative?

- Focuses on lived experience
- Preserves chronological flow
- Makes sense of incongruent data
- Rich and holistic
- Compliments quantitative data

When to use qualitative research?

- Exploring a health problem or issue about which little is known
- Produce conceptual models
- Investigating the feasibility, acceptability and appropriateness of potential programmes.
- Identifying problems in on-going interventions and suggesting appropriate solutions to those problems

- Can help in identifying cultural and social factors that affect health care positively or negatively.
- Complementing quantitatively collected data by helping to interpret its results.
- Designing more valid survey instruments.

Qualitative approaches

- Phenomenology
- Grounded theory
- Ethnography
- Case study

Comparing Approaches (I)

Qualitative

- Understanding
- Interview/observation
- Discovering frameworks
- Text (words), images, objects
- Theory generating
- Quality of informant more important than sample size
- Subjective
- Embedded knowledge
- Models of analysis: fidelity to text or words of interviewees

Quantitative

- Prediction
- Survey/questionnaires
- Existing frameworks
- Numerical
- Theory testing (experimental)
- Sample size core issue in reliability of data
- Objective
- Public
- Model of analysis: parametric, non-parametric

Comparing Approaches (II)

Qualitative

- **Methods**
 - Focus Groups
 - Interviews
 - Surveys
 - Self-reports
 - Observations
 - Document analysis
 - **Sampling:** Purposive
- **Quality Assurance:**
 - **Trustworthiness:** Credibility, Confirmability, Dependability, Transferability

Quantitative

- **Methods**
 - Observational
 - Experimental
 - Mixed
 - **Sampling:** Random (simple, stratified, cluster, etc) or purposive
- **Quality Assurance:**
 - **Reliability:** Internal and External
 - **Validity:** Construct, Content, Face

Characteristics of Qualitative Research

- Purpose is understanding meanings people have constructed
- “Naturalistic”
- Uses subjective data
- Interpret results in contexts
- The researcher is the instrument
- The researcher’s signature is apparent
- Deals with local conditions not controlled

Exercise

Area of investigation	Qualitative investigation	Quantitative investigation
GP Consultation		
Lung Cancer		

Qualitative Research

Examples of Qualitative Research Methods

- Focus group discussions
- Key informant interviews
- Ethnography
- Phenomenology

Qualitative Methodologies (Example)

- Ethnography
 - An ethnography is a description and interpretation of a cultural or social group or system. The research examines the group's observable and learned patterns of behaviour, customs, and ways of life

Qualitative Methodologies (Example)

- Phenomenology:
 - Phenomenology is the study of human experience and of the ways things present themselves to us in and through such experience (Sokolowski 2000, 2).
- Phenomenology is the study of structures of consciousness as experienced from the first-person point of view. (Smith 2008)

- The main difference between ethnography and phenomenology is that ethnography focuses on the collective experiences of a community whereas phenomenology focuses on the individual experiences of individuals.

Qualitative Research Techniques

- Participant observation (field notes)
- Interviews / Focus groups
- Video / Text and Image analysis (documents, media data)

Qualitative Research Techniques

- Interviews

- # Content analysis

- Observation

Involves Skills of

- Observing
- Conversing
- Participating
- Interpreting

1- Qualitative interviews

- Structured
- Semi-structured
- Unstructured

2- Focus groups

Why do a focus group?

- Little is known about a topic
- At the early stages of a research project
- Mixed methods

3- Observation

- Researcher observes participants in natural environments

Sampling in Qualitative research

- Types of sampling e.g. purposive, snowballing...
- Collect data until data saturation

IMG 11: 47y/o Syrian female, 6 y experience in SA.

N: OK Dr. IMG11

IMG11: OK.

N: Dr. Sonia is a 33 years old Indian physician who works in a PHCC in Riyadh for 3 years as a GP. In your opinion, what are the challenges that she might face living in Riyadh?

IMG11: Ummm...for her the first challenge is language. People in Riyadh speak Arabic only. It is rare to find someone who speaks English. This could be a challenge in the first years however it can be solved quickly after couple of years. Customs and habits are, for sure, are different for a new comer.

N: What about customs and habits?

IMG11: You know, Saudi Arabia is rich in tradition. Saudis usually link their traditions with their religion. A Muslim new comer may find some conflicts. They may be judged by others just because they do not follow a Saudi tradition that is though by Saudis to be part of Islam

N: Can you give me an example for that?

IMG11: For example..ummm...most women here cover their faces. I do not even cover my head in Syria but here I have to cover even my face to avoid being judged by my patients if they see me in a supermarket or anywhere else. And yes, women do not drive and they say it is (Haram) [religiously forbidden], since when driving a car is Haram!? Providing a personal driver is costly and my husband is busy most of the times, he is a cardiac surgeon in X hospital, he is very busy. Sometimes I feel like if I am imprisoned and cannot do anything, you know, taxis are not safe.

N: I want to talk more about patients judging you if you do not try to look like them. How does that affect your work?

IMG11: It may affect trust between my patients and I. People her are so much connected to their religion, which is good of course, so I know by looking d

Data Analysis Steps

- Organize and prepare the data for analysis
- Read all data, get a sense of the whole
- Begin detailed analysis with coding process
- Generate a description of the setting /people as well as categories or themes for analysis
- Represent themes (writing, visual, etc.)
- Interpret and make meaning out of data
- *iterative, non-linear process

Analyzing data

- Cut and past
- Software programmes, e.g. NVivo, ATLAS.ti, NUD*IST

K-State MOOC Feasibility Study.nvp - NVivo

Word Frequency Query Result 10.1007_978-3-642-03278-3_ DelphiMethodology X

Delphi protocol can be applied when a community of experts is required to deliver a consensual answer.

Reference 2 - 0.24% Coverage

an agreement among the experts about what the answer should be. This consensus reaching problem has been already considered in the literature, though its automatization remains as a challenge.

Reference 3 - 1.22% Coverage

The Delphi Process in general is not rigid and its structure depends on the situation. Looking for guidelines, this paper follows the steps and guidelines stated in [5]. The Delphi approach has been applied for several areas for different uses. For instance, Roth [31] used the Delphi approach for acquiring knowledge from multiple experts. Recently, Bryant [4] applied the Delphi method for estimating the risk factors of the terrestrial chemical spill; Hayes [13] did a Delphi study of the future of marketing of the higher education; Miró [21] applied the delphi method to reach consensus among professionals with interest in chronic pain among children and adolescents. The automatization of Delphi is considered first as a set of computers and software assisting human experts in the process. In this line, literature mentions DEMOS [19], which is an on-line discussion system based on Delphi, and Turo [34], who presents a Delphi method with computer assistance.

Reference 1 - 0.18% Coverage

Schema matching, the identification of data elements that have the same meaning, is a critical step to ensure the success of database integration.

<Internals\DelphiResearch\10.1007_978-3-7908-2352-3_14> - § 3 references coded [1.21% Coverage]

Reference 1 - 0.50% Coverage

The Delphi method is commonly used for future studies, and it utilizes experts, who are asked to evaluate different statements or hypotheses about the future.

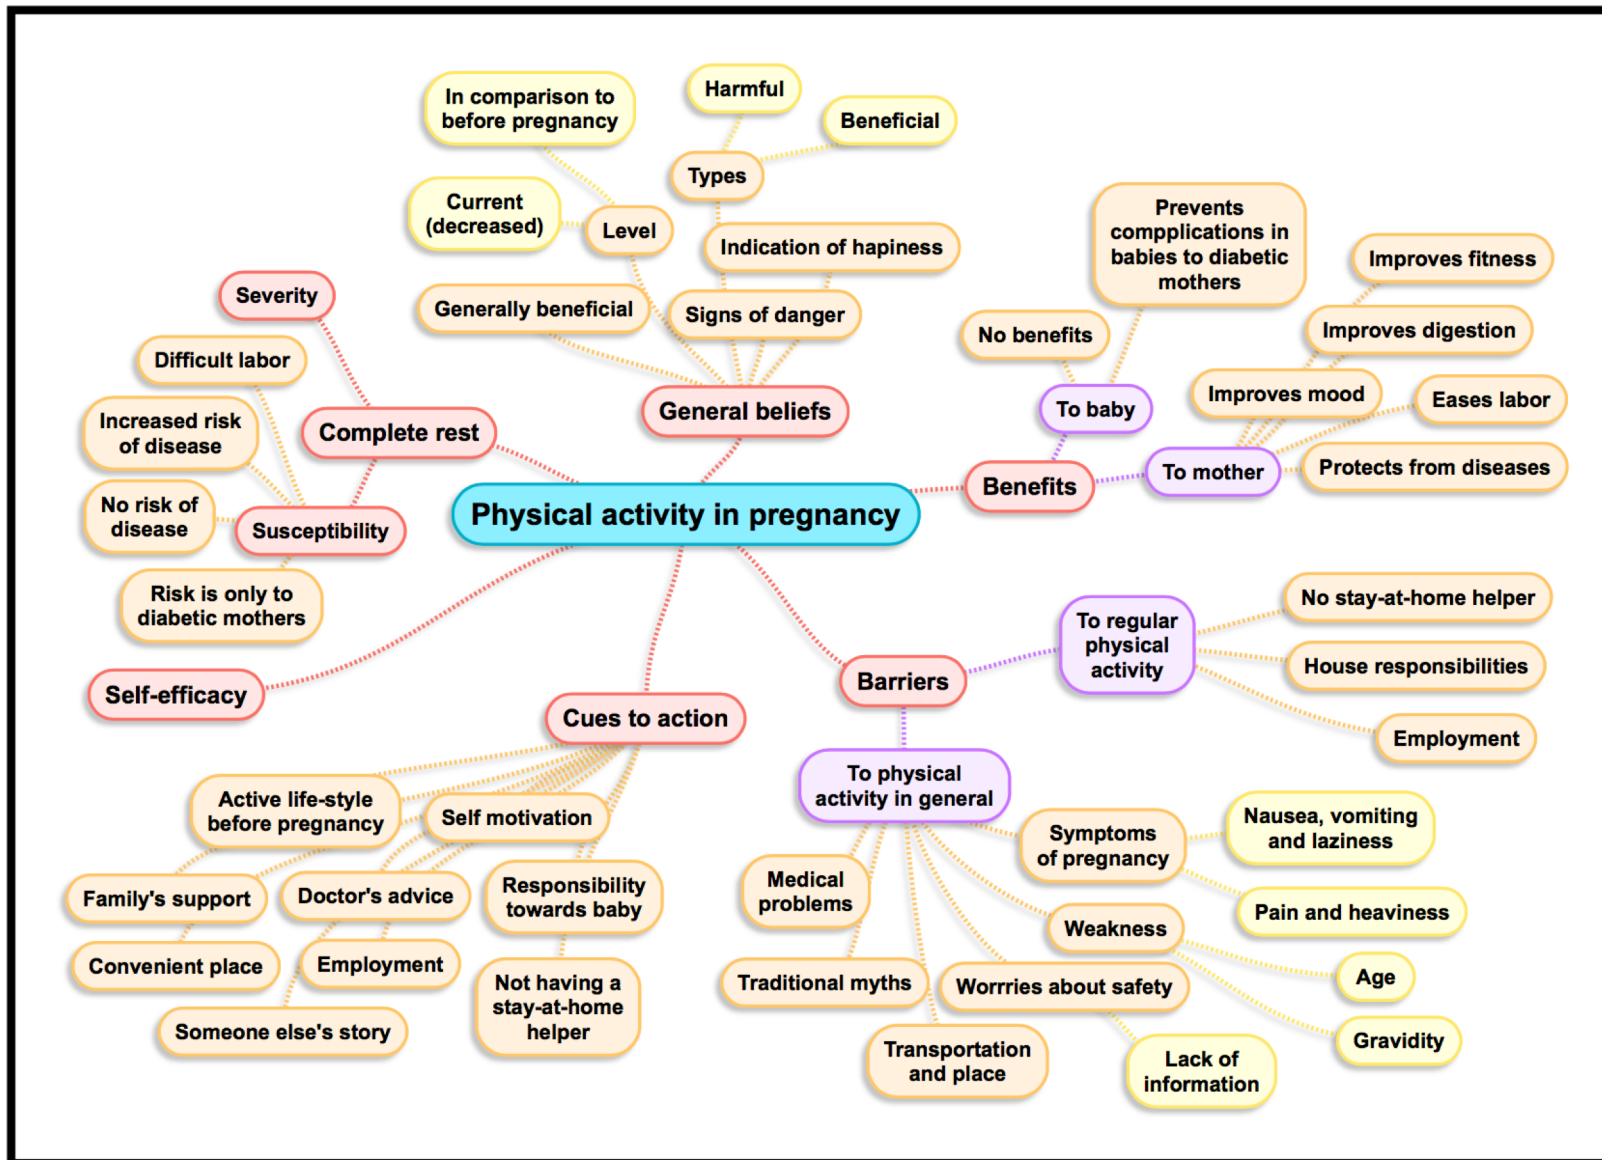

Figure 3.1: Thematic network.

How can I reduce subjectivity in qualitative research

- Reflectivity
- Probing
- Triangulation

- Often, the person most changed by the research is the researcher

Concluding remarks

- Qualitative research identify what really matters for patients and care providers
- Qualitative methods can provide unique contributions to health services and clinical research
- There are widely accepted procedures for study design, sampling, data collection, and data analysis in qualitative research
