Urologic Disorders

Abdulaziz Althunayan

Consultant Urologist
Assistant professor of Surgery

Urologic Disorders

- Urinary tract infections
- Benign Prostatic Hyperplasia and voiding dysfunction
- Scrotal disorders

Urinary tract infections

Urethritis

Acute Pyelonephritis

Epididymitis/orchitis

Chronic Pyelonephritis

Prostatitis

Renal Abscess

cystitis

URETHRITIS

- **■** S&S
 - urethral discharge
 - burning on urination
 - Asymptomatic
- Gonococcal vs. Nongonococcal

DX:

- incubation period(3-10 days vs. 1-5 wks)
- Urethral swab
- Serum: Chlamydia-specific ribosomal RNA

URETHRITIS

Table 17-1. CLASSIC URETHRITIS

Table 17-1. CEASSIC ORETTIRITIS					
	Gonorrhea	Chlamydia			
Organism	Neisseria gonorrheae	Chlamydia trachomatis			
Organism type	Gram-negative diplococci	Intracellular facultative anaerobe			
Incubation period	3-10 days	1-5 wk			
Urethral discharge	Usually profuse, purulent	Usually scant			
Asymptomatic carriers	40%-60%	40%-60%			
Diagnostic test	Ligand chain reaction	Polymerase/ligand chain reaction			
Other tests	Gram stain	Culture			
(37,11,191), 477,192	Culture	Immunoassay			
Recommended treatment	Ceftriaxone 125 mg IM once	Azithromycin 1g PO			
	plus	or			
	Azithromycin 1 g PO	Doxycycline 100 mg PO bid × 7 days			
	or				
	Doxycycline 100 mg PO bid × 7 days				
Alternative treatment	Cefixime 400 mg PO	Erythromycin 500 mg PO qid 7 days			
	or	or			
	Ciprofloxacin 500 mg PO	Erythromycin ethylsuccinate 800 mg PO qid × 7 days			
	or	or			
	Ofloxacin 400 mg PO	Ofloxacin 300 mg PO bid × 7 days			
	plus	0,0000			
	Azithromycin 1 g PO				
	or				
	Doxycycline 100 mg PO bid × 7 days				
	Doxycycline 100 mg rO bid \(\times 7 days				

Epididymitis

- Acute: pain, swelling, of the epididymis <6wk
- chronic :long-standing pain in the epididymis and testicle, usu. no swelling.
- DX
 - Epididymitis vs. Torsion
 - -U/S
 - Testicular scan
 - Younger: N. gonorrhoeae or C. trachomatis
 - − Older : E. coli

Epididymitis

Table 17–3. TREATMENT OF ACUTE EPIDIDYMO-ORCHITIS

Epididymo-Orchitis Secondary to Bacteriuria

- Do urine culture and sensitivity studies
- Promptly administer broad-spectrum antimicrobial agent (e.g., tobramycin, trimethoprim-sulfamethoxazole, quinolone antibiotic)
- Prescribe bed rest and perform scrotal evaluation
- Strongly consider hospitalization
- 5. Evaluate for underlying urinary tract disease

Epididymo-Orchitis Secondary to Sexually Transmitted Urethritis

- Do Gram stain of urethral smear
- Administer ceftriaxone, 250 mg IM once; then tetracycline, 500 mg PO qid for at least 10 days, or doxycycline, 100 mg PO bid for at least 10 days
- Prescribe bed rest and perform scrotal evaluation
- 4. Examine and treat sexual partners

Adapted from Berger RE: Urethritis and epididymitis. Semin Urol 1983;1:143.

Prostatitis

- Syndrome that presents with inflammation± infection of the prostate gland including:
 - Dysuria, frequency
 - dysfunctional voiding
 - Perineal pain
 - Painful ejaculation

Prostatitis

Traditional	National Institutes of Health	Description		
Acute bacterial prostatitis	Category I	Acute infection of the prostate gland		
Chronic bacterial prostatitis	Category II	Chronic infection of the prostate gland		
N/A	Category III chronic pelvic pain syndrome (CPPS)	Chronic genitourinary pain in the absence of uropatho- genic bacteria localized to the prostate gland with stan- dard methodology		
Nonbacterial prostatitis	Category IIIA (inflammatory CPPS)	Significant number of white blood cells in expressed pros- tatic secretions, postprostatic massage urine sediment (VB3), or semen		
Prostatodynia	Category IIIB (noninflammatory CPPS)	Insignificant number of white blood cells in expressed prostatic secretions, postprostatic massage urine sedi- ment (VB3), or semen		
N/A	Category IV asymptomatic inflammatory prostatitis (AIP)	White blood cells (and/or bacteria) in expressed prostatic secretions, postprostatic massage urine sediment (VB3), semen, or histologic specimens of prostate gland		

Prostatitis

- Acute Bacterial Prostatitis :
 - Rare
 - Acute pain
 - Storage and voiding urinary symptoms
 - Fever, chills, malaise, N/V
 - Perineal and suprapubic pain
 - Tender swollen hot prostate.
 - Rx : Abx and urinary drainage

Chronic Prostatitis/Chronic Pelvic Pain Syndrome

CATEGORY II-Chronic Bacterial Prostatitis

 \forall

Antimicrobials (4-12 weeks)

¥

Antimicrobials and Prostatic Massage

Suppressive/Prophylactic Antimicrobials

Surgery (last resort unless specific indication) CATEGORY IIIA

Chronic Nonbacterial Prostatitis

Antimicrobials (4 weeks)

Prostatic Massage (+/- antimicrobials)

Alpha blockers

Anti-inflammatories

Phytotherapy

Finasteride or Pentosanpolysulfate

> Surgery (if indication)

Microwave Heat Therapy (last resort)

CATEGORY IIIB Prostatodynia

ostatodynia

Analgesics
Anti-inflammatories
and/or
Muscle Relaxants

-alpha blockers

-diazepam/baclophen

•

Physical Therapies

- -biofeedback
- -perineal/pelvic floor massage
- -trigger point release

Surgery (if indication)

Reassurance and Psychological Support

cystitis

S&S:

- dysuria, frequency, urgency, voiding of small urine volumes,
- Suprapubic /lower abdominal pain
- ± Hematuria
- -DX:
 - dip-stick
 - urinalysis
 - **■** Urine culture

Table 14-10. TREATMENT REGIMENS FOR ACUTE CYSTITIS

Circumstances	Route	Drug	Dosage (mg)	Frequency per Dose	Duration (days)
Women					
Healthy	Oral	Ciprofloxacin Enoxacin Levofloxacin Lomefloxacin TMP-SMX TMP Microcrystalline nitrofurantoin Norfloxacin	500 400 500 400 160-800 100 100 400	Every 12 hr Every 12 hr Every day Every day Every 12 hr Every 12 hr Four times a day Every 12 hr	3
Symptoms for >7 days, recent urinary tract infection, age >65 yr, diabetes, diaphragm use		TMP-SMX or Fluoroquinolone	160-800 As above	Every 12 hr As above	7
Pregnancy	Oral	Amoxicillin Cephalexin Microcrystalline nitrofurantoin TMP-SMX	250 500 100 160-800	Every 8 hr Four times a day Four times a day Every 12 hr	7
Men					
Healthy and <50 years old	Oral	TMP-SMX or	160-800	Every 12 hr	7
77		Fluoroquinolone	As above	As above	

TMP, trimethoprim; TMP-SMX, trimethoprim-sulfamethoxazole.

Pyelonephritis

- Inflammation of the kidney and renal pelvis
- S&S :
 - Chills
 - Fever
 - Costovertebral angle tenderness (flank Pain)
 - GI:abdo pain, N/V, and diarrhea
 - Gr-ve sepsis
 - Dysuria, frequency

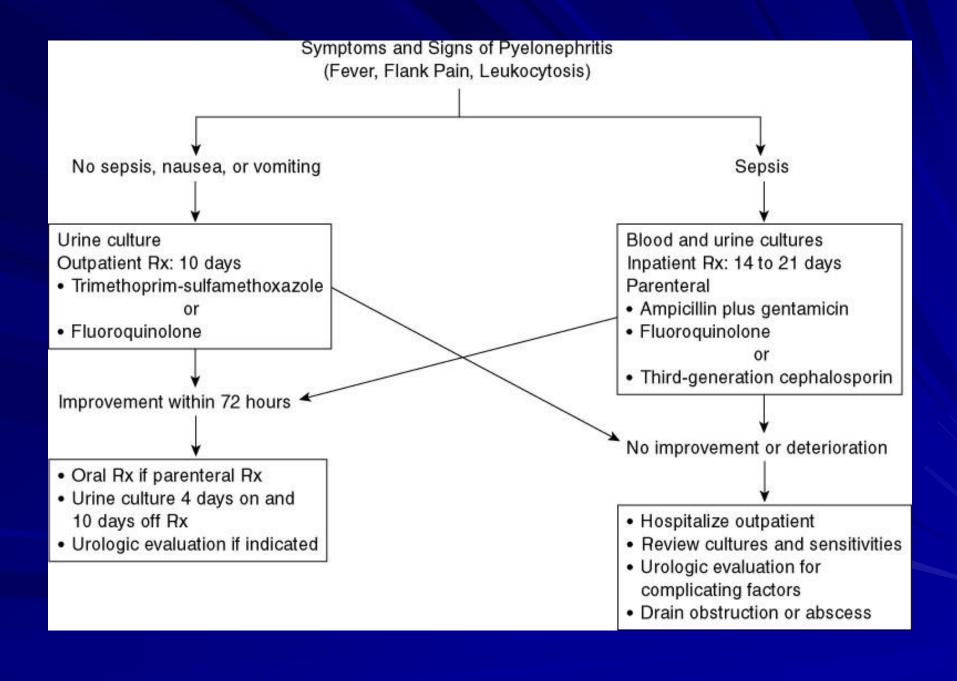

Pyelonephritis

■ Investigation:

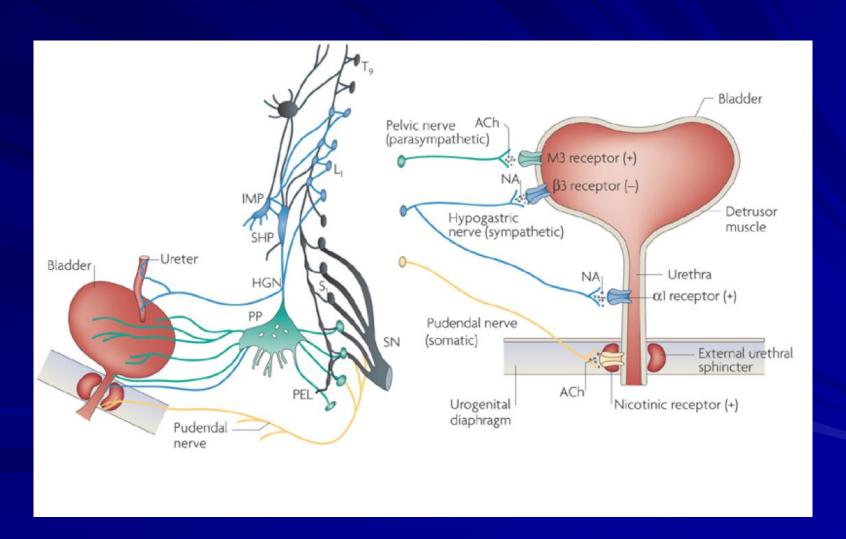

- Urine C&S :+VE(80%)
 - Enterobacteriaceae (E. coli), Enterococcus
- Urinalysis:↑ WBCs, RBCs, Bacteria
- (±) ↑serum Creatinine
- CBC : Leukocytosis

Pyelonephritis

- Imaging:
 - -IVP
 - -U/S
 - -CT

Voiding Dysfunction

LUTS

STORAGE (irritative)

- Dysuria
- Frequency
- Nocturia
- Urgency
- Incontinence

VOIDING (obstructive)

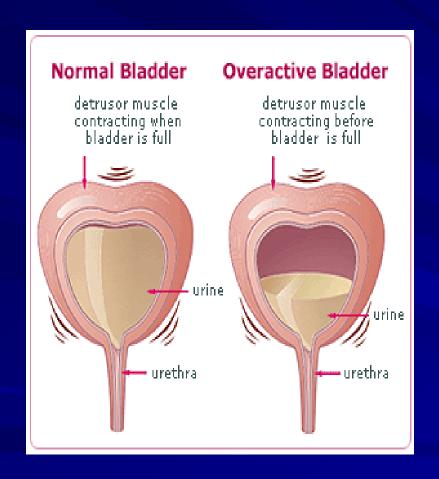

- Hesitancy
- Weak stream
- Straining
- Intermittency
- Drippling
- Retention

Voiding Dysfunction

- Failure to store
 - Bladder problems
 - overactivity
 - Hypersensitivity
 - Outlet problem
 - Stress incontinence
 - Sphincter deficiency
 - combination

- Failure to void
 - Bladder problems
 - Neurologic
 - Myogenic
 - idiopathic
 - Outlet problem
 - BPH
 - Urethral stricture
 - Sphincter dyssynergia
 - combination

Over Active Bladder

Work up

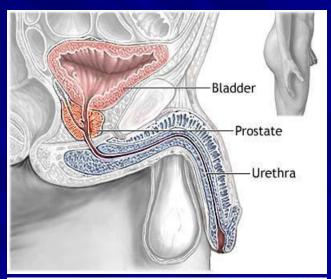

- History
- Physical exam
- UA
- C/S
- US

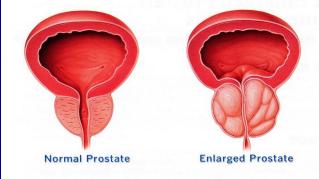

Treatment

- Behavioral
- Pelvic floor exercise
- Anti-cholenirgics
- beta-3 agonist

Benign Prostatic Hyperplasia BPH

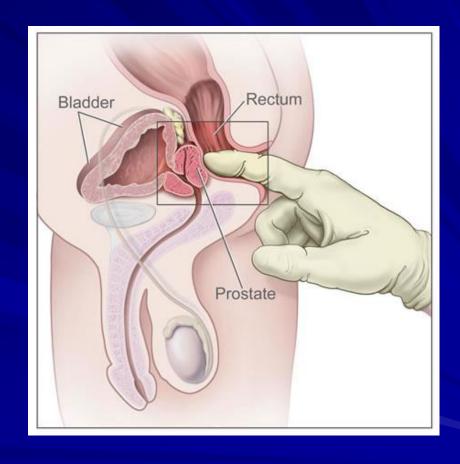

- Clinically:
 - LUTS
 - poor bladder emptying
 - urinary retention
 - urinary tract infection
 - Hematuria
 - Renal insufficiency

Benign Prostatic Hyperplasia

- Physical Examination
 - 1-DRE 2- Focused neurologic exam
 - Prostate Ca
 - rectal Ca
 - anal tone
 - neurologic problems
 - Abdomen: distended bladder

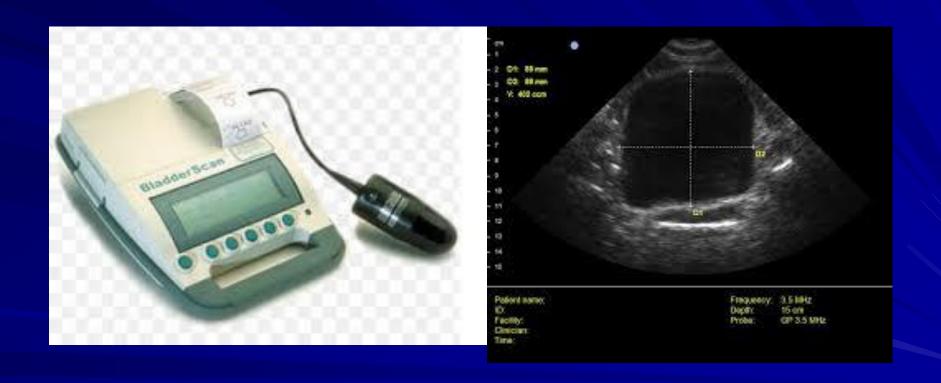

Benign Prostatic Hyperplasia

- Urinalysis, culture
 - UTI
 - Hematuria
- Serum Creatinine
- Serum Prostate-Specific Antigen
- Flow rate
- Ultrasound (Kidney, Bladder And Prostate)

US

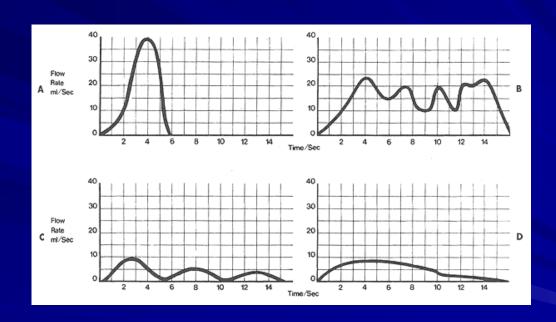

PVR

Uroflowmetry

Complications

- bladder stones
- UTI
- bladder decompensation
- incontinence
- upper tract deterioration
- hematuria
- AUR

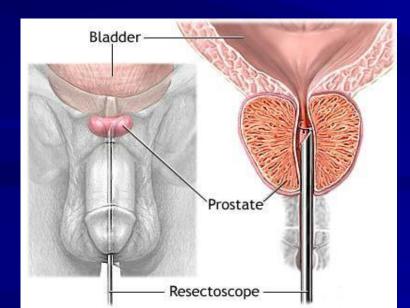

Benign Prostatic Hyperplasia

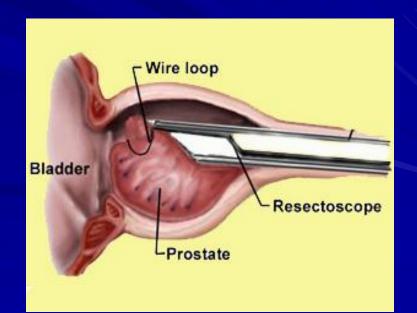

- Treatment options
 - medical therapy
 - ■α-Adrenergic Blockers
 - Tamsulocin
 - Alfuzocin
 - Terazocin
 - Androgen Suppression
 - Finasteride
 - Dutasteride

Benign Prostatic Hyperplasia

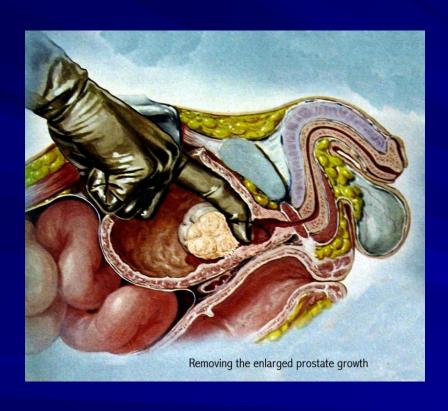

Surgical Rx

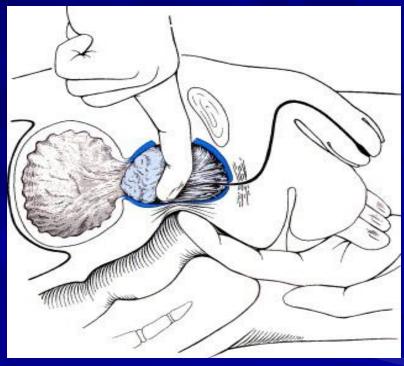

- Endoscopic
- Transurethral Resection of the Prostate TURP
- Laser ablation
- prostatic stents

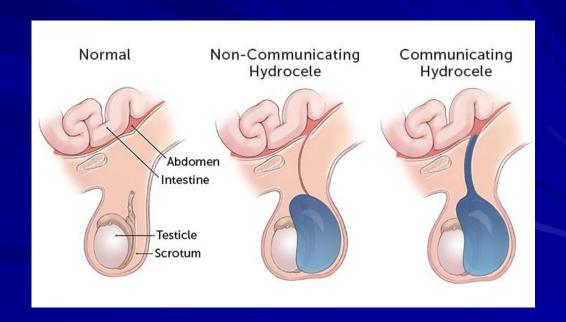

Open Prostatectomy

Hydrocele

- hydrocele occurs in males when fluid fills the scrotum.
- Fluid can surround one or both testicles, causing swelling in the scrotum.
- More common in baby boys, it may also occur in adult men.
- Imaging
 - Ultrasound
- Management
 - Hydrocelectomy

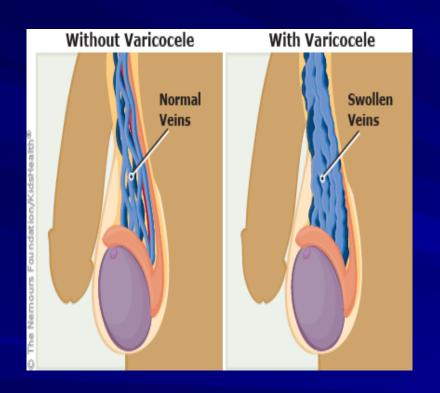

Hydrocele sac

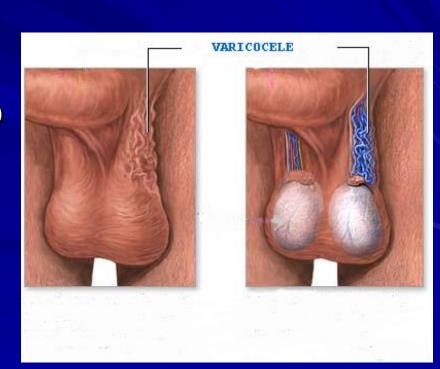

Varicocele

- Most identified common cause of male infertility.
- It affects 20% of male population.
- Not all men with varicocele are infertile.
- It can be graded:
 - 1. Palpable with Valsalva maneuver.
 - 2. Palpable without Valsalva maneuver.
 - 3. Visible.

Varicocele

- More common on the left side.
- It impairs fertility by increase intratesticular tempreture.
- Treatment of varicocele indicated in:
 - Infertility with abnormal semen parameters.
 - Testicular pain
 - Impaired testicular volume.
- Treatment:
 - ligation (open, microscopic or lap)
 - Angioembolization

varicoceles

Varicoceles microligation
