

Tamer Mesallam MD, PhD,

**Ass. Professor of Phoniatics
Communication and Swallowing Disorders
Unit (CSDU)
ORL/HNS Department
King Saud University**

Tamer Mesallam MD

Communication and Swallowing Disorders

Tamer Mesallam MD

Objectives

- Understand physiology of communication.
- Recall classifications of communication and swallowing disorders.
- Differentiate between different causes of communication and swallowing disorders.
- Understanding the assessment and management of these disorders.

Language Disorders

Symbolization

LANGUAGE

Articulation

SPEECH

Phonation

VOICE

Respiration

Language

A symbolic arbitrary system relating sounds to meaning.

Speech

A neuro-muscular process whereby language is uttered. It includes the coordination of respiration, phonation, articulation, resonance and prosody.

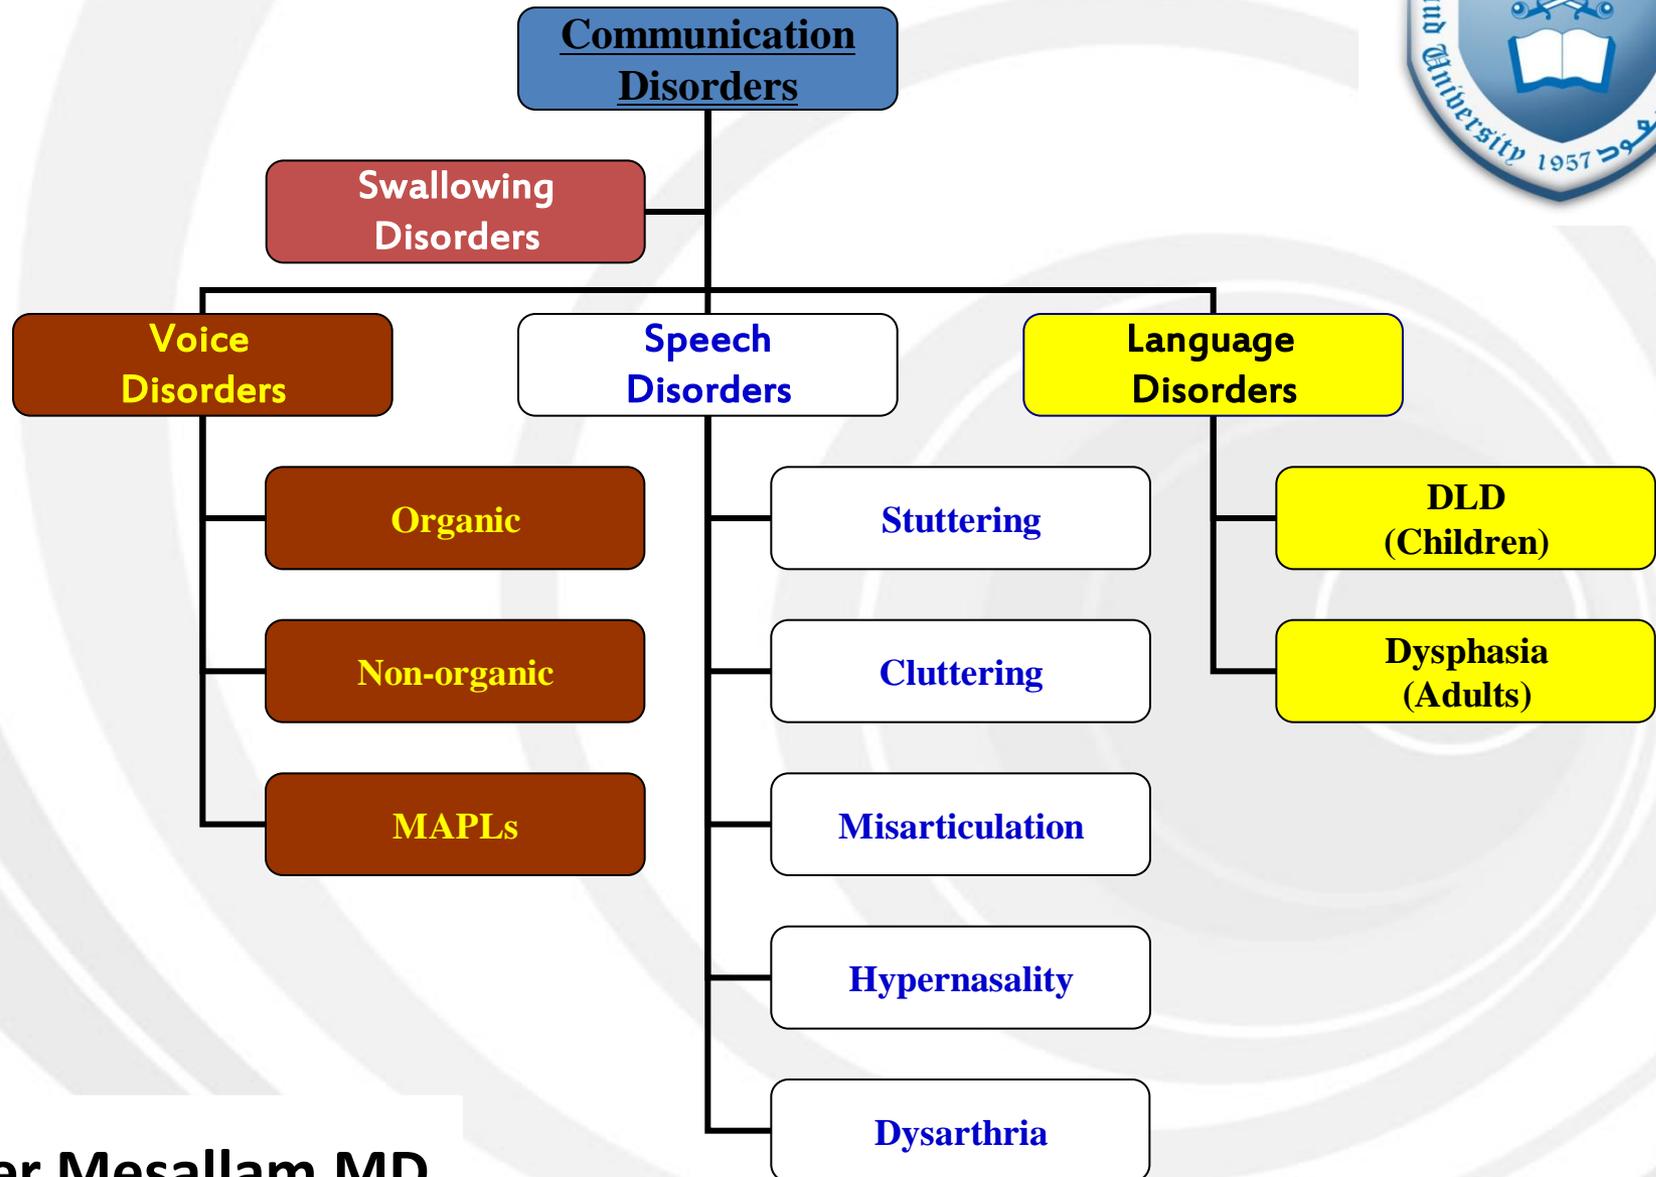

Voice

The result of vibration of the true vocal folds using the expired air.

Swallowing

The process of successful passage of food and drinks from the mouth through pharynx and esophagus into the stomach.

Language Disorders

Tamer Mesallam MD

I. Language Disorders:

[1] Delayed Language Development (DLD)

[2] Dysphasia

[1] Delayed Language Development (DLD)

Definition of DLD:

Delay or failure to acquire language matched with age.

Central language control

- The left hemisphere is the processor of language functions in almost all people regardless handedness. It is the dominant hemisphere.
- Language areas are distributed along the rolandic fissure
- Anterior language area mainly in the temporal region concerned with expressive aspect.
- Posterior language area mainly in the parietal region concerned with receptive aspect.

Structural domains of language;

- ❑ Semantics; meaning.
- ❑ Phonology; articulation
- ❑ Syntax; grammar

Stages of normal language development

- 2-4 months; Babbling
- 6 months; Vocal play
- 9 mo-1 year; 1st word
- 1-1/2 years; 20 words
- 2 years; 200 words, 2 word sentence
- 3 years; 2000 words, 3 word sentence
- 4 years; 4 word sentence
- 5-7 years; Full maturation of all language modalities.

Pre-requisites of normal language development

- ❑ Intact brain functions (conceptual, motoric and cognitive abilities).
- ❑ Intact sensory channels;
 - Auditory
 - Visual
 - Tactile
 - Kinesthetic
- ❑ Intact psyche.
- ❑ Stimulating environment.

Etiology of delayed language development

- ❑ Brain damage
 - Diffuse subcortical lesion (M.R.).
 - Localized brain damage with motor handicap (BDMH).
 - Minimal brain damage (ADHD).

- ❑ Sensory deprivation.
 - Hearing impairment
 - Conductive
 - Sensorineural
 - Mixed
 - Central auditory processing disorder
 - Visual impairment

Etiology of delayed language development (Cont.)

- Psychiatric illness
 - Autism.
 - Autism Spectrum Disorder (ASD).

- Environmental deprivation

- Idiopathic (Specific Language Impairment).

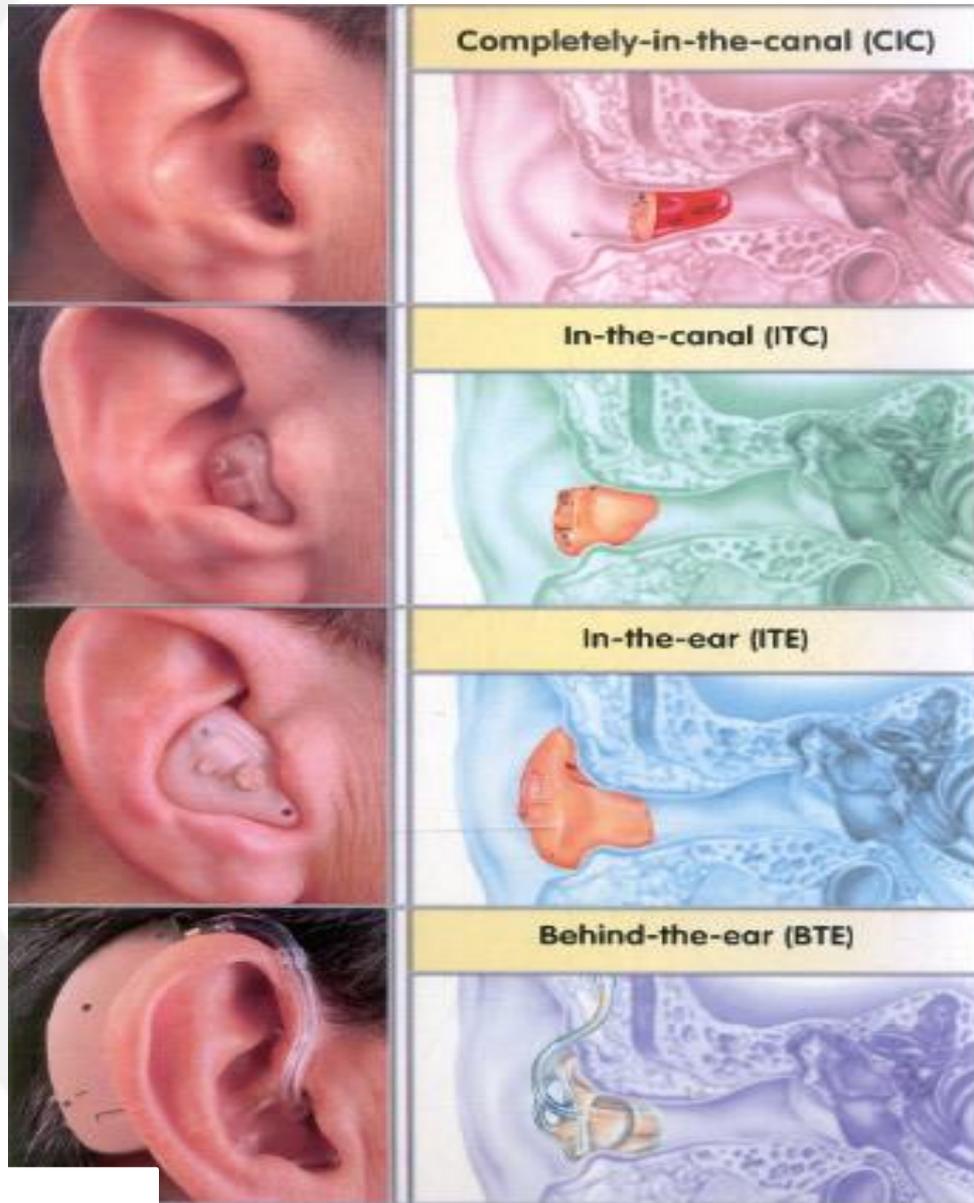

Assessment of language development

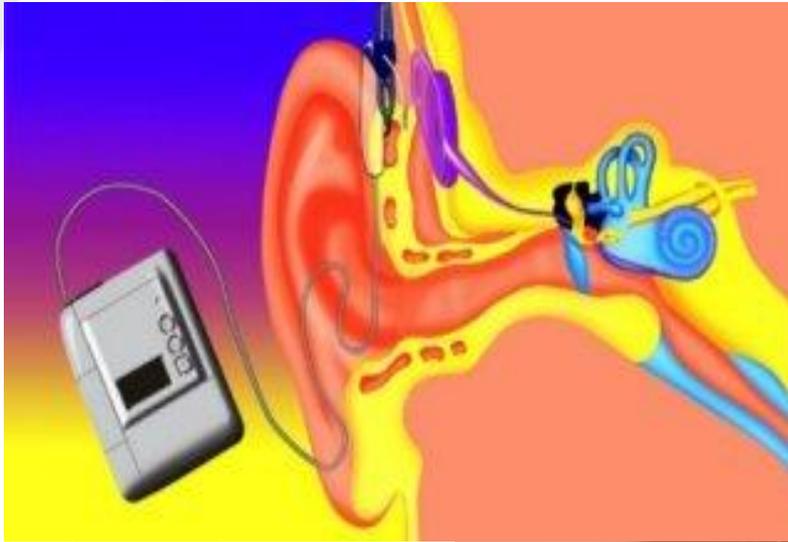

- I. History taking.
- II. Physical examination.
- III. Investigations:
 - Psychometry (IQ).
 - Audiometry.
 - Brian Imaging
 - EEG
 - Ophthalmological consultation

Management of DLD:

- Early detection.
- Providing the suitable aid
 - Hearing (HA or CI). - Visual Aid.
 - Physiotherapy
- Family counseling.
- Direct language therapy (Individual- group).
- Medications (Autism and ADHD).

Tamer Mesallam MD

I. Language disorders:

[2] Dysphasia:

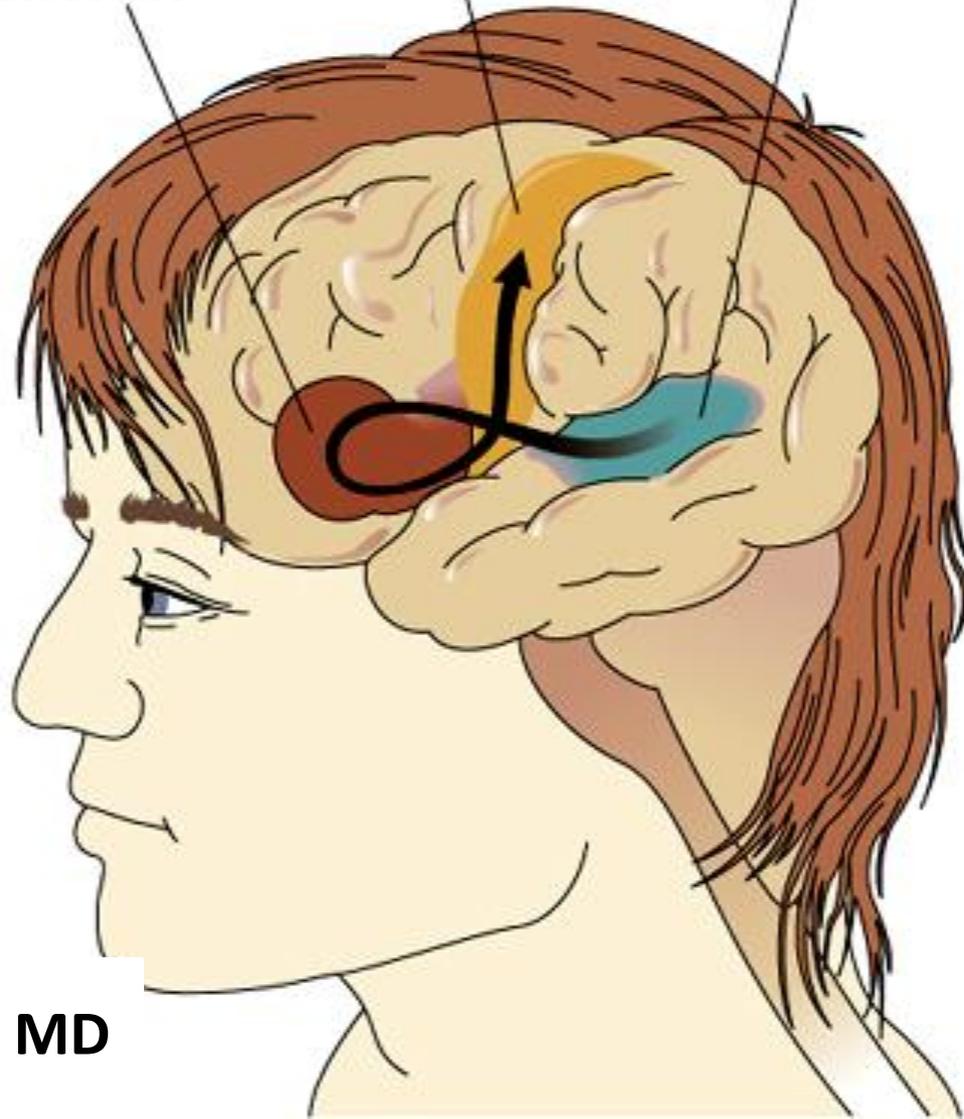

Definition:

Language deterioration after its full development due to brain insult: infarction, hemorrhage, atrophy, etc

Broca's area
Formulates
a speech
response and
stimulates
motor cortex

Motor cortex
Stimulates muscles
that produce
speech

Wernicke's area
Processes
incoming
speech and
comprehends it

Etiology;

- CVA
- Neoplastic
- Traumatic
- Inflammatory
- Degenerative
- Metabolic
- Poisoning

Types of dysphasia:

1. Expressive.
2. Receptive.
3. Mixed predominantly expressive.
4. Mixed predominantly receptive.
5. Global.

Assessment of Dysphasia

- I. History taking.
- II. Physical examination: ... , neurological exam.
- III. Investigations:
 - CT / MRI brain.
 - Dysphasia test.
 - Psychometry (IQ).
 - Audiometry.

Management of Dysphasia

- Management of the cause.
- Physical rehabilitation (Physiotherapy).
- Family counseling.
- Language therapy.
- Alternative and augmentative communication.

Speech Disorders

Tamer Mesallam MD

II. Speech disorders:

1. Dyslalia (Misarticulation):

Definition:

Faulty articulation of one or more of speech sounds not appropriate for age.

Types of dyslalia:

A) Sigmatism (/s/ defect):-

- Interdental sigmatism.
- Lateral sigmatism.
- Pharyngeal sigmatism.

B) Back-to-front dyslalia:-

/k/ /t/

/g/ /d/

C) Rotacism (/r/ defect).

D) Voiced-to-nonvoiced dyslalia:-

/g/ /k/

/d/ /t/

/z/ /s/ etc...

Assessment of dyslalia:

- I. History taking.
- II. Physical examination: ... , tongue, ...
- III. Investigations:
 - Audio recording.
 - Articulation test.
 - Psychometry (IQ).
 - Audiometry.

Management of dyslalia:

- Treatment of the cause:
 - . Tongue tie.
 - . Dental anomalies.
 - . Hearing aids

- Speech therapy.

II. Speech disorders:

2. Stuttering:

Definition:

The intraphonemic disruptions resulting in sound and syllable repetitions, sound prolongations, and blocks.

Normal dysfluency:

- Less than 6 years.
- Only repetitions.
- No associated muscular activity.
- Not aware.

Incidence of stuttering: 1%.

Onset:

- Earliest = 18 months.
- Latest = 13 years.

Epidemiology:

- more in families with history of stuttering.
- can occur in mentally retarded.
- very rare in the hearing impaired.

Gender ratio:

4 : 1 (male : female)

Theories of Stuttering:

The exact cause is unknown.

- Organic theory.
- Neurosis theory.
- Learning theory.

Assessment of stuttering:

- I. History taking.
- II. Physical examination: APA, VPA, ...
- III. Investigations:
 - Audio and video recording.
 - Stuttering severity (eg SSI).
 - Articulation test.
 - Psychometry (IQ).

Auditory Perceptual Analysis (APA):

A. Core behaviors:

- Intraphonemic disruption.
- Repetitions.
- Prolongations.
- Blocks.

B. Secondary reactions:

- Muscular activity and struggle.
- Interjection.
- Word substitutions and circumlocution.

C. Concomitant reactions:

- Fear.
- Breathing (antagonism, interruption, prolongation, cessation, ...).
- Eye contact.
- Skin pallor/flushing.

Management of stuttering:

- ❑ Family and patient counseling.
- ❑ Speech therapy:
 - a. Indirect therapy: if not aware.
 - b. Direct therapy: if aware.

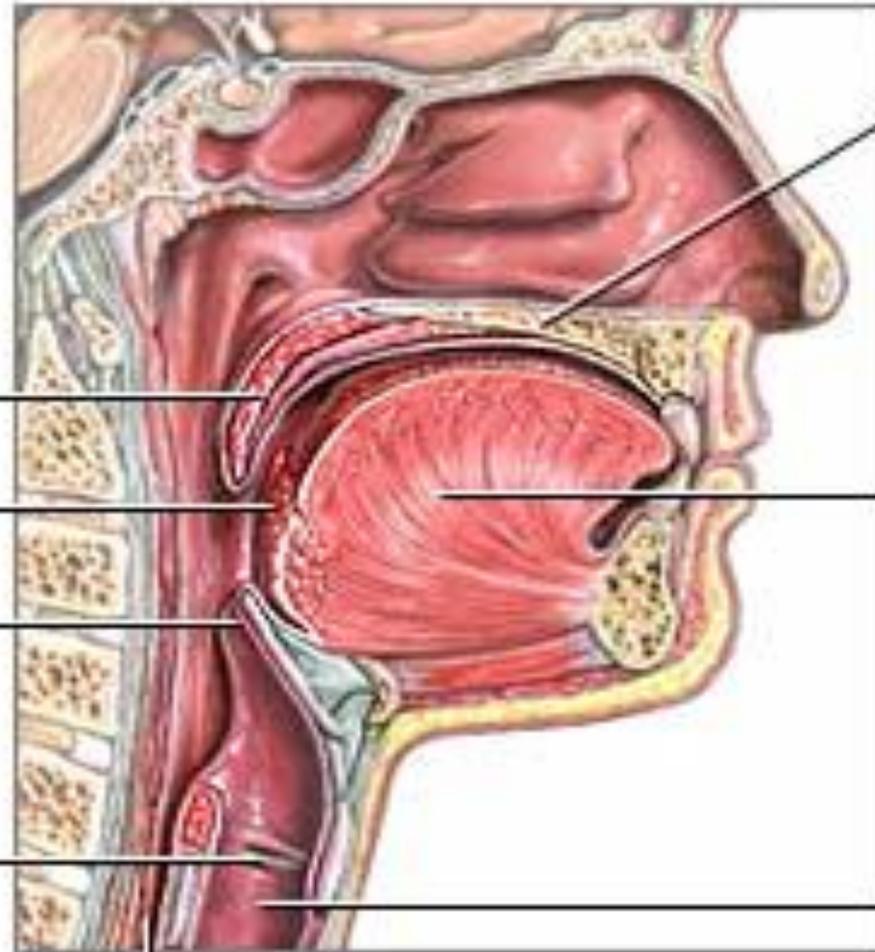

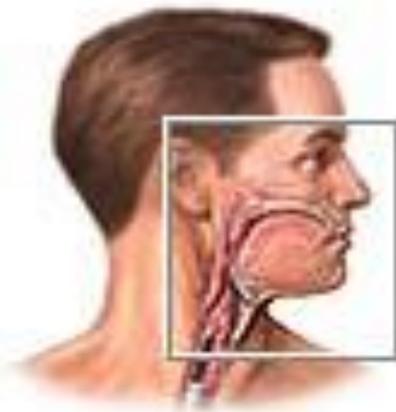

II. Speech disorders:

3. Hypernasality:

Definition:

Faulty contamination of the speech signal by the addition of nasal noise. It results from velopharyngeal insufficiency (VPI).

Hard
palate

Soft palate

Palatine tonsil

Epiglottis

Vocal fold

Tongue

Trachea

Esophagus

Velum: At rest and during speech

Normal Velopharyngeal Function

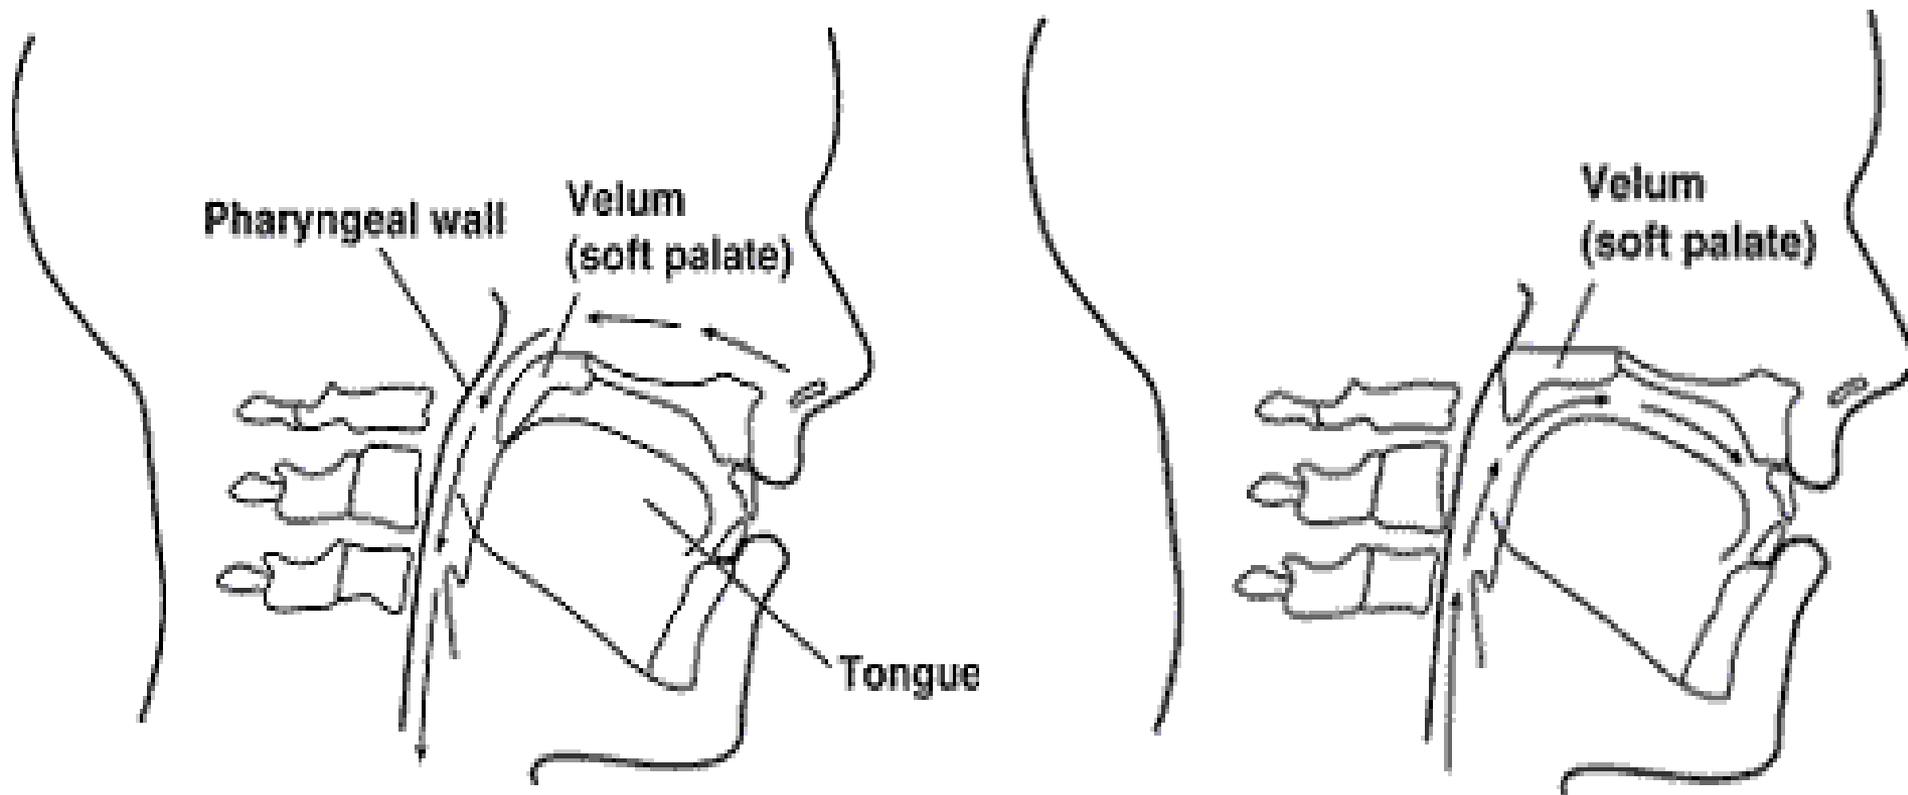

Fig. 1 Velum at rest.

Fig. 2 Velum during speech.

Causes of hypernasality:

I. Organic:

1. Structural: (VP Insufficiency)

a) Congenital:

- Overt cleft palate.
- Submucous cleft palate.
- Non-cleft causes:
 - . Congenital short palate.
 - . Congenital deep pharynx.

b) Acquired:

- Adenotonsillectomy.
- Palatal trauma.
- Tumors of the palate & pharynx.

2. Neurogenic: (VP Incompetence)

- Palatal upper motor neuron lesion.
- Palatal lower motor neuron lesion.

Causes of hypernasality (cont.):

II. Non-organic (Functional) VP Mis-learning:

- Faulty speech habits.
- Mental retardation.
- Neurosis or hysteria.
- Hearing impairment.
- Post-tonsillectomy pain.

Effects of VPD:

- Feeding problems: nasal regurgitation.
- Psychosocial problems.
- Communicative problems:
 - . Speech: hypernasality.
 - . Language: DLD.
 - . Voice: hyper or hypofunction.

Assessment of hypernasality (VPD)

Parent interview

Perceptual

- Simple tests:

. Gutzman's (a/i) test.

. Czermak's (cold mirror) test.

- Resonance

- Articulation

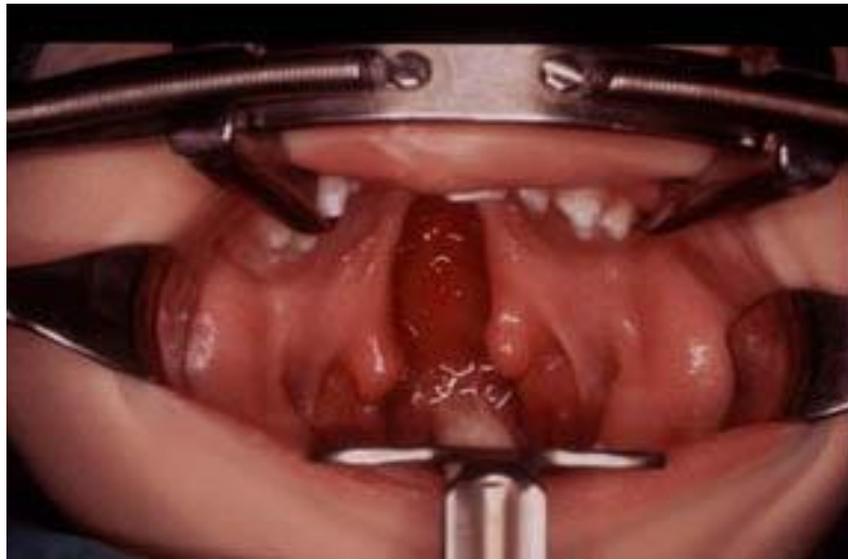

- Nasal air emission

- Voice

Intra-oral evaluation

Instrumental: - Nasopharyngoscopy

- Nasometry

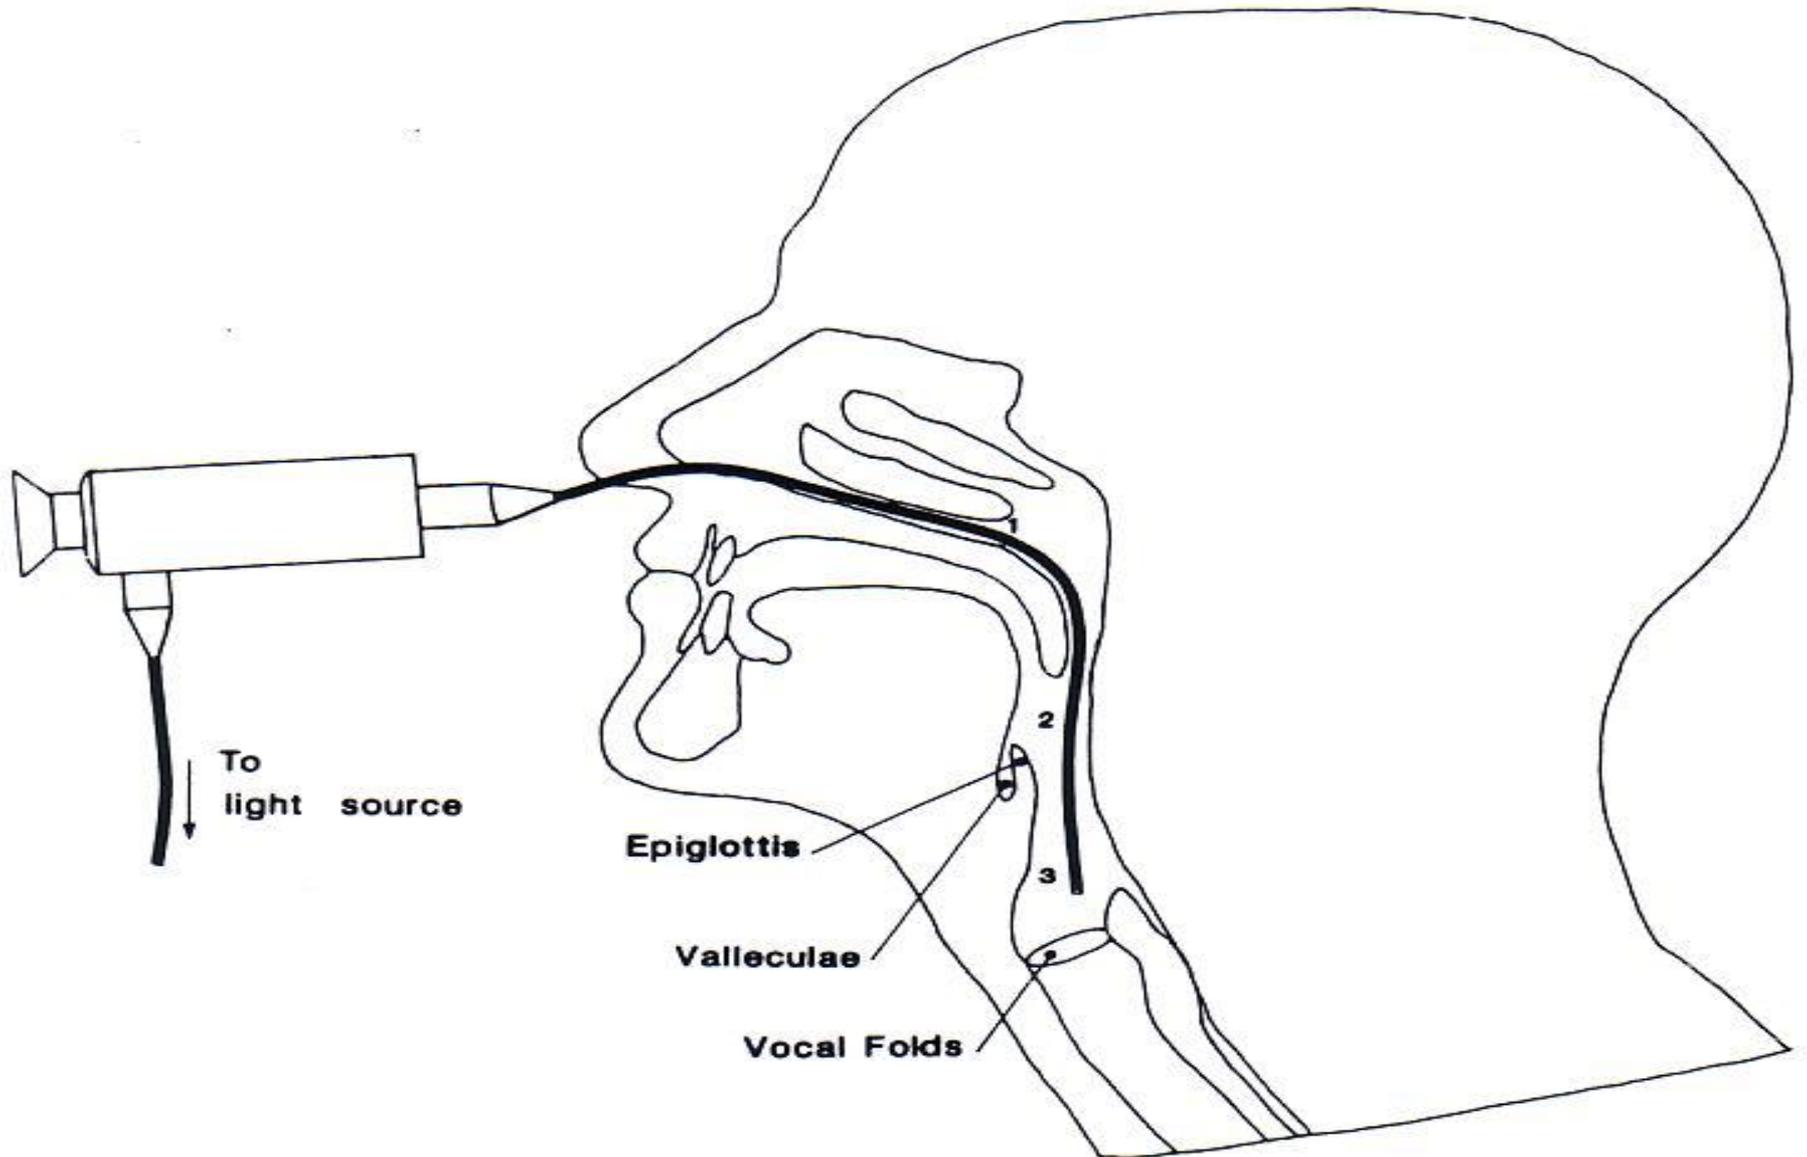

Submucous Cleft

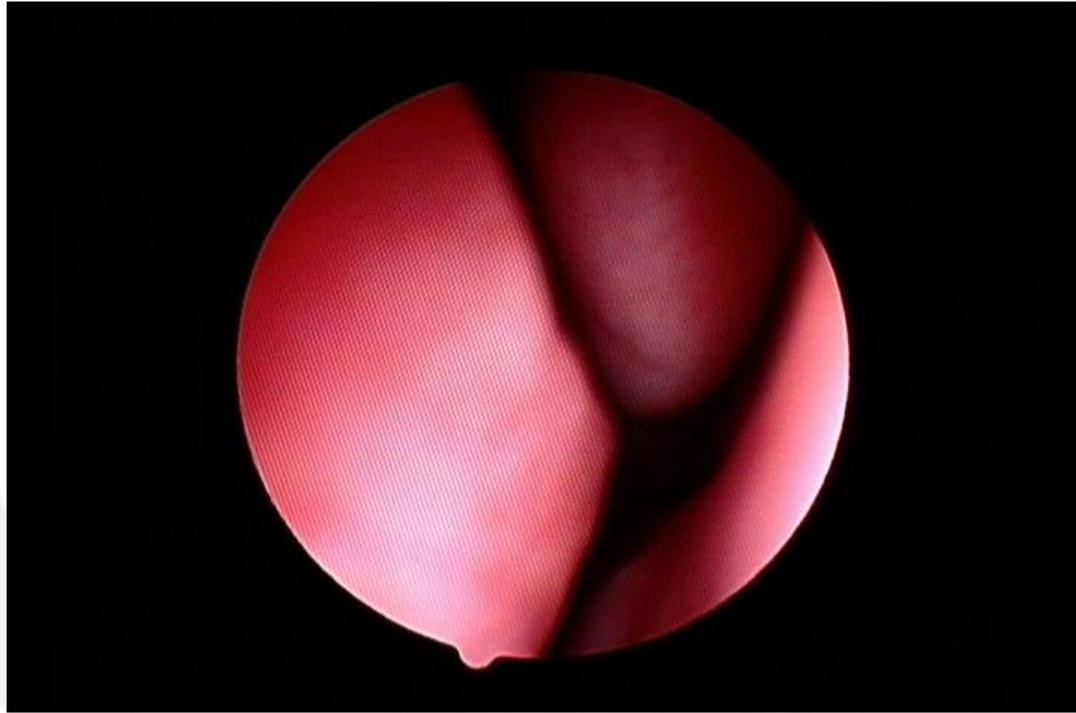

Tamer Mesallam MD

Flexible nasopharyngoscopy

Normal closure

Severe VPD

Nasometry

Management of VPD

- Multidisciplinary team
- Family counseling**
- Management of feeding problem
- Management of otological and audiological problems
- Surgical intervention
- Orthodontic intervention
- Phoniatic intervention (language, speech, voice)

Treatment Decision

- Velopharyngeal insufficiency
 - surgery (speech therapy post-op)

- Velopharyngeal incompetence
 - surgery (speech therapy post-op)
 - prosthetic devices
 - speech therapy

- Velopharyngeal mislearning
 - speech therapy

Surgery

- Pharyngeal flap.
- Sphincter-platoplasty
- Post-pharyngeal wall augmentation.

Pharyngeal flap

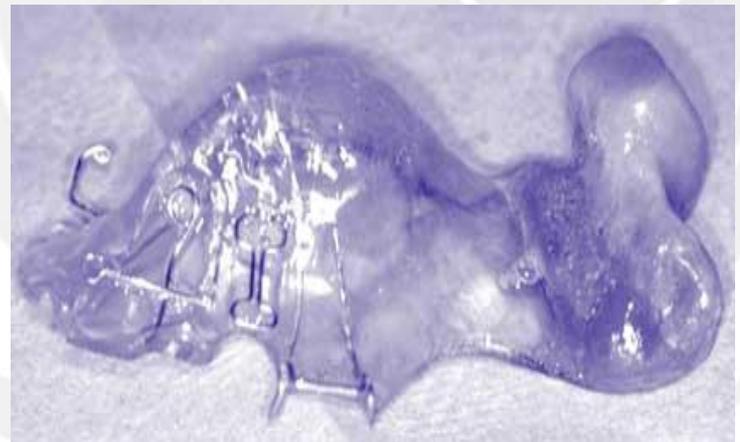

Prosthetic Devices

❑ Palatal lift: to raise the velum when there is poor velar movement (i.e. dysarthria)

❑ Palatal obturator: to occlude an open cleft or fistula

❑ speech bulb: to occlude nasopharynx

II. Speech disorders:

4. Dysarthria:

Definition:

Any combination of disorders of respiration, phonation, articulation, resonance, and prosody, that may result from a neuromuscular disorder.

Types of dysarthria:

1. Flaccid dysarthria:

- Lesion: lower motor neuron level.
- Communication:
 - * breathy phonation.
 - * hypernasality.

2. Spastic dysarthria:

- Lesion: upper motor neuron level.
- Communication:
 - * strained strangled phonation.
 - * labored breathing.

Types of dysarthria (cont.):

3. Ataxic dysarthria:

- Lesion: cerebellum level.
- Communication:
 - * increased equal stresses.
 - * irregular articulatory breakdown.

Types of dysarthria (cont.):

4. Dyskinetic dysarthria:

- Lesion: basal ganglia level.

A. Hypokinetic type (Parkinsonism):

- * breathy phonation.

- * rapid rate.

- * short rushes of speech with final decay.

B. Hyperkinetic type:

i. Quick hyperkinetic (Chorea):

- * variable rate and loudness.

ii. Slow hyperkinetic (Athetosis):

- * slow rate.

Types of dysarthria (cont.):

5. Mixed dysarthria:

- may be the most common.
- Examples:
 - * Motor neuron disease Flaccid + Spastic.
 - * Multiple sclerosis Ataxic + Spastic.
 - * Wilson's disease Ataxic + Spastic + Hypokinetic.

Assessment of dysarthria:

- I. History taking.
- II. Physical examination: ... , mouth, palate, ... , neurological exam, ...
- III. Investigations:
 - Audio recording.
 - Fiberoptic nasopharyngolaryngoscopy.
 - CT/MRI brain
 - Dysphasia test.
 - Psychometry (IQ).
 - Articulation test.
 - Audiometry.
 - Nasometry.
 - MDVP.
 - Aerodynamics (Aerophone II).

Management of dysarthria:

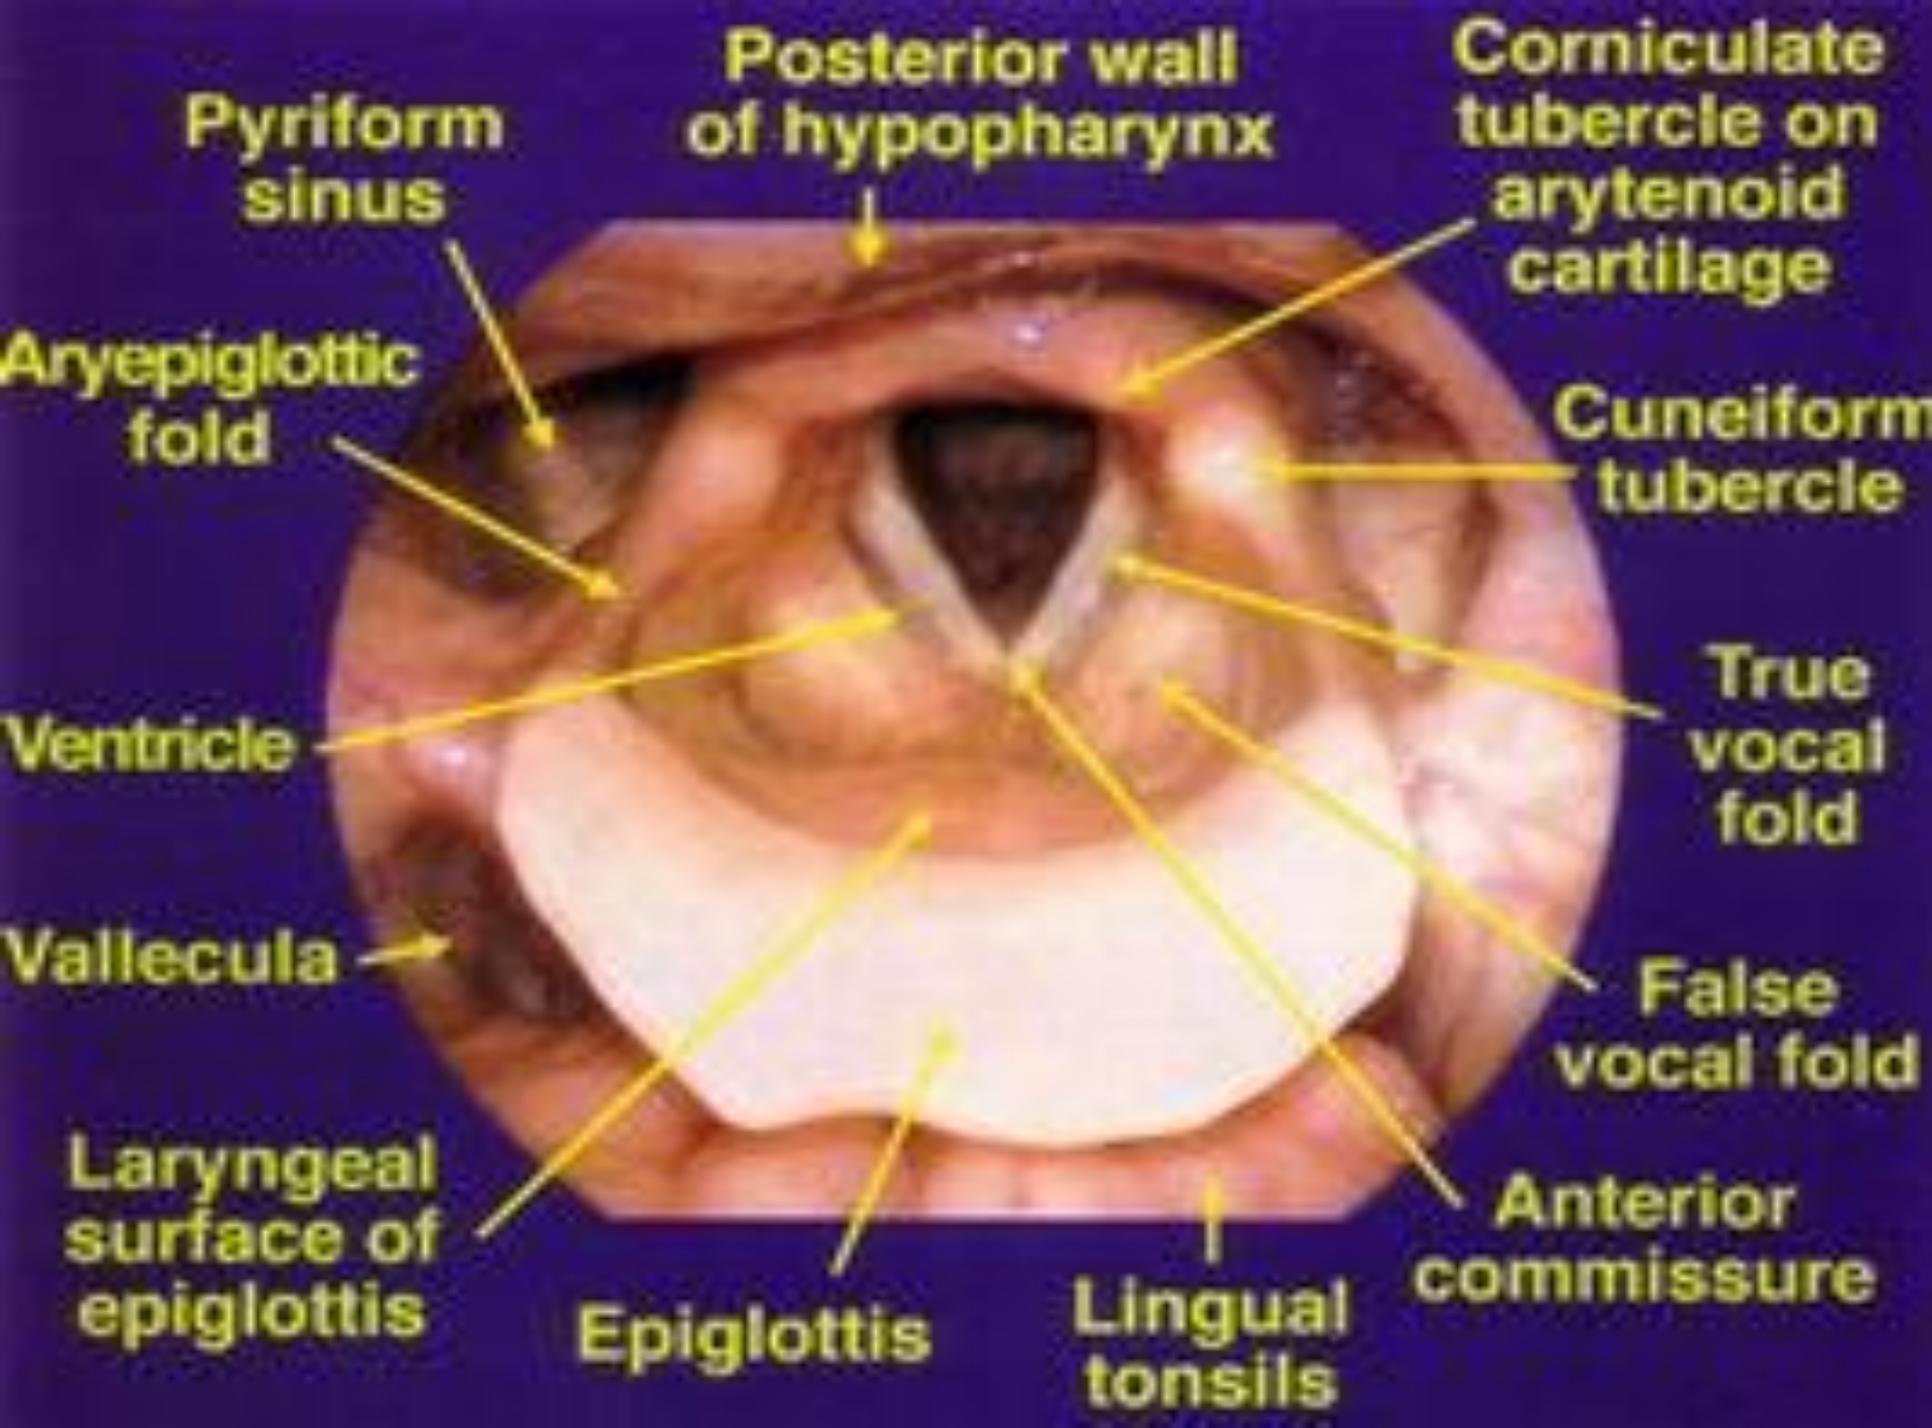

Individualized:

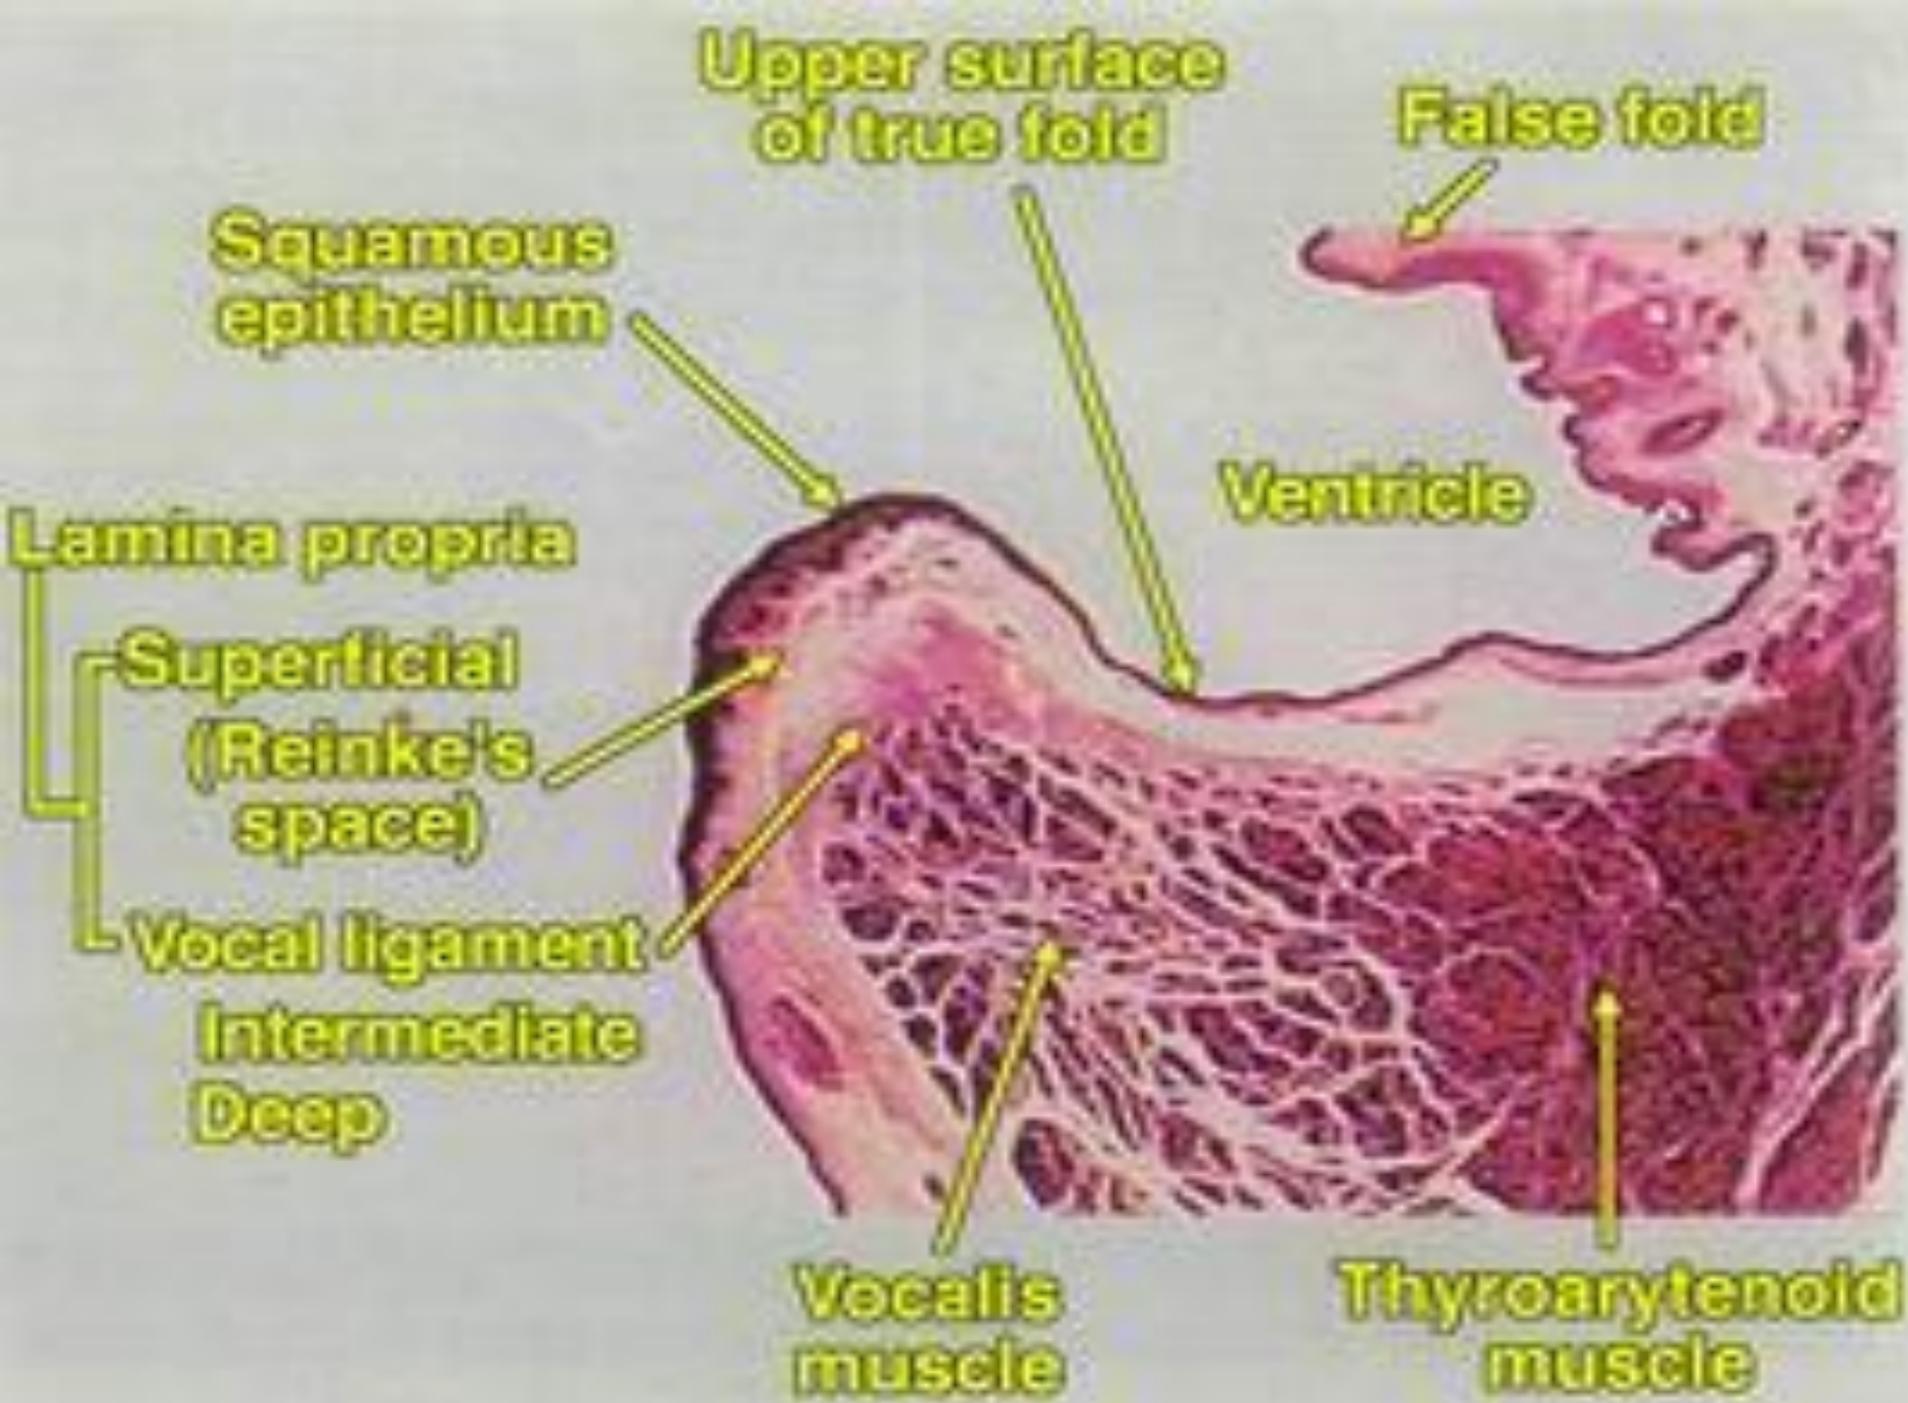

- Management of the cause.
- Patient counseling.
- Communicative therapy:
 - * Articulation.
 - * Phonation.
 - * Resonance.
 - * Respiration.
 - * Prosody.
- Alternative and augmentative communication.

Voice Disorders

Tamer Mesallam MD

Prerequisites of “normal” voice production:

1. Normal range of movement of vocal folds.
2. Normal mobility of mucosa on deep layers.
3. Optimal coaptation of vocal folds' edges.
4. Optimal motor force.
5. Optimal pulmonary support.
6. Optimal timing between vocal fold closure and pulmonary exhalation.
7. Optimal tuning of vocal fold musculature (int. & ext.).

Usually the presenting symptoms in voice disorders are:

- Dysphonia:** Any change of the patient's voice from his habitual one.
- Aphonia:** Loss of the patient's voice (functional or organic).
- Phonasthenia:** a subjective complaint of dryness, tightness, globus feeling and voice fatigue, while the patient's voice and larynx is normal.
- Dysodia:** Change of the singing voice while the speaking voice is normal.

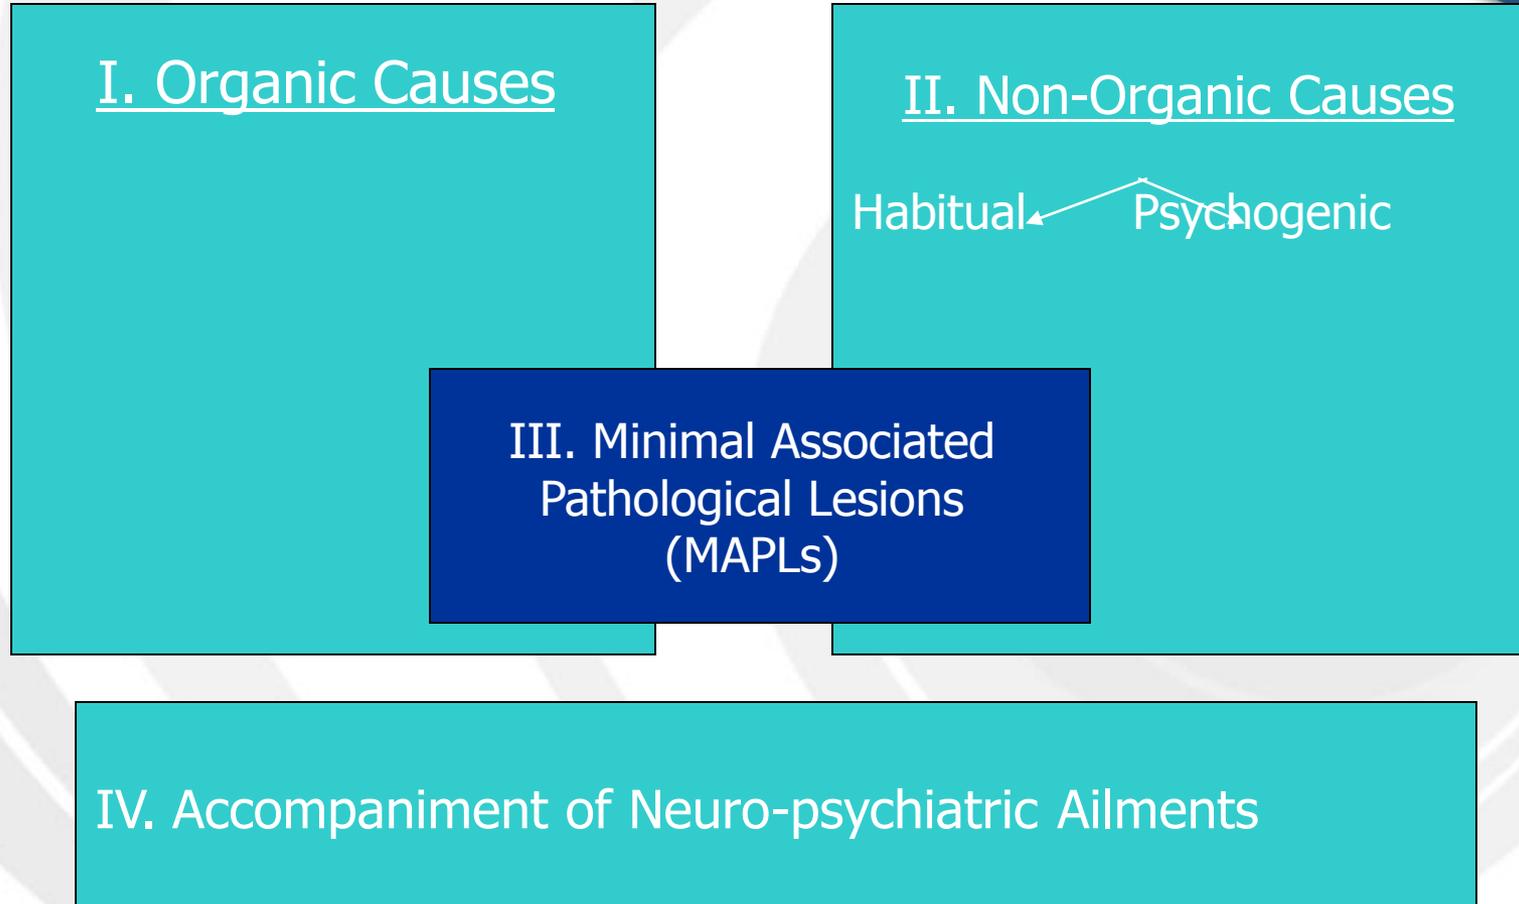

Definition of dysphonia:

- “Difficulty in phonation”.
- “Change of voice from his /her habitual”.
- “Hoarseness” = roughness & harshness of voice.

Etiological classification of dysphonia:

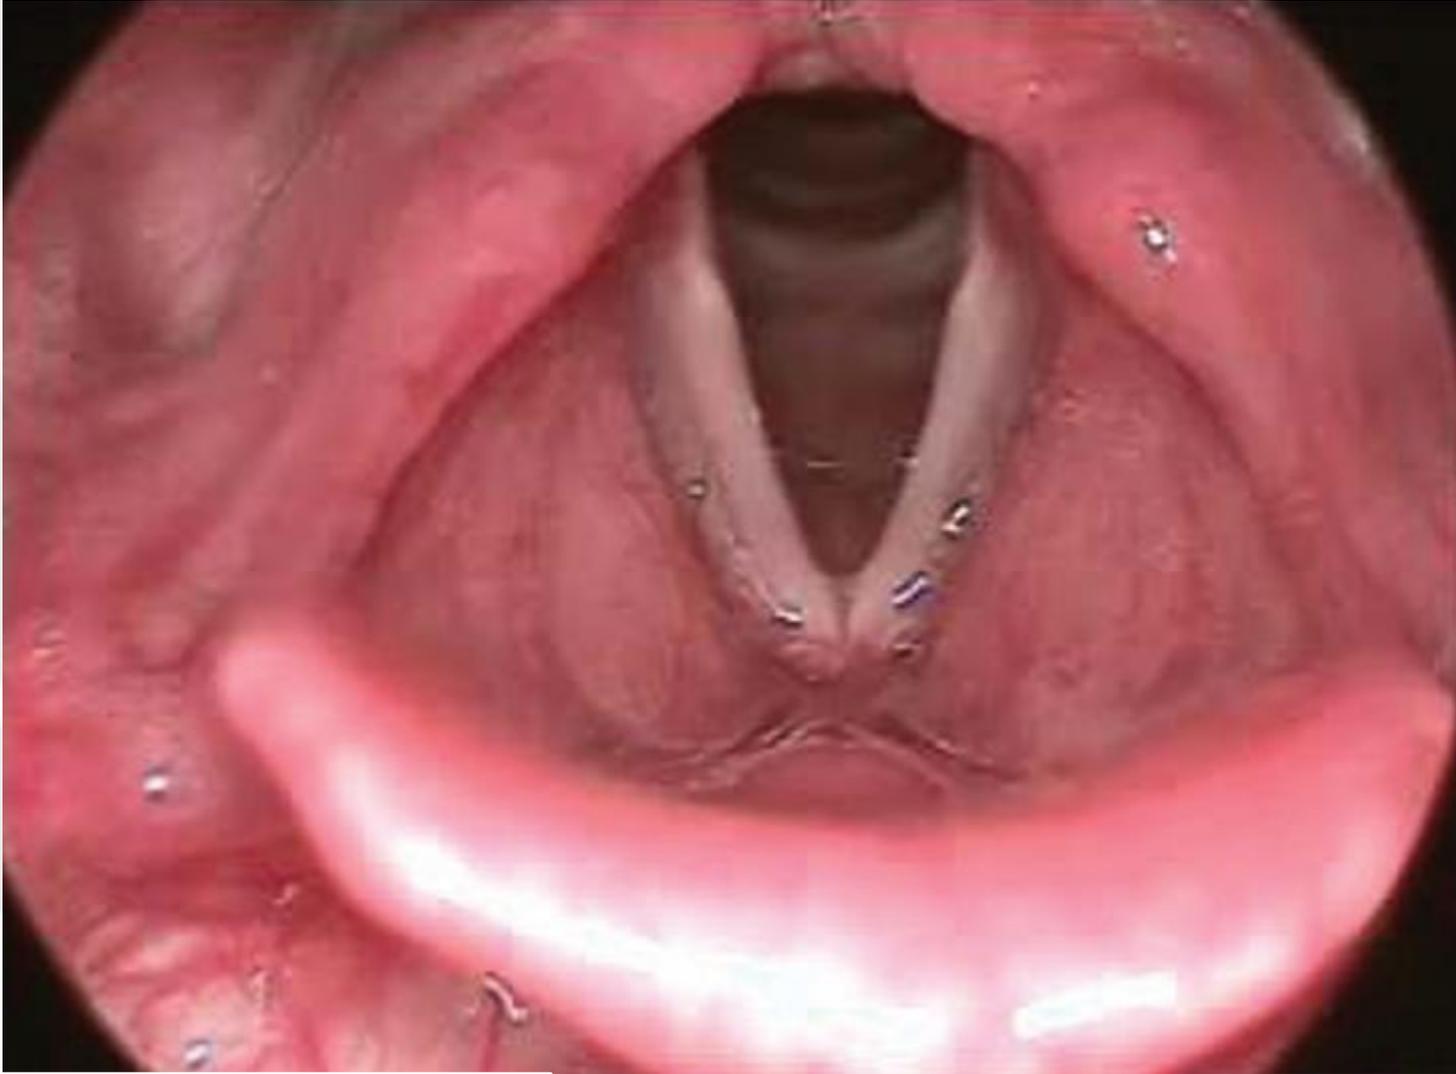

III.Voice disorders:

A) Organic voice disorders:

- . Congenital.
- . Inflammatory.
- . Traumatic.
- . Neurological.
- . Neoplastic.
- . Hormonal.
- . Status post-laryngectomy.

III.Voice disorders:

B) Non-organic voice disorders:

i. Habitual:

1. Hyperfunctional childhood dysphonia.
2. Incomplete mutation.
3. Phonasthenia (Voice fatigue).
4. Hyperfunctional dysphonia.
5. Hypofunctional dysphonia.
6. Ventricular dysphonia.

B) Non-organic voice disorders (cont.):

ii. Psychogenic:

- 1- Psychogenic dysphonia.
- 2- Psychogenic aphonia.

III.Voice disorders:

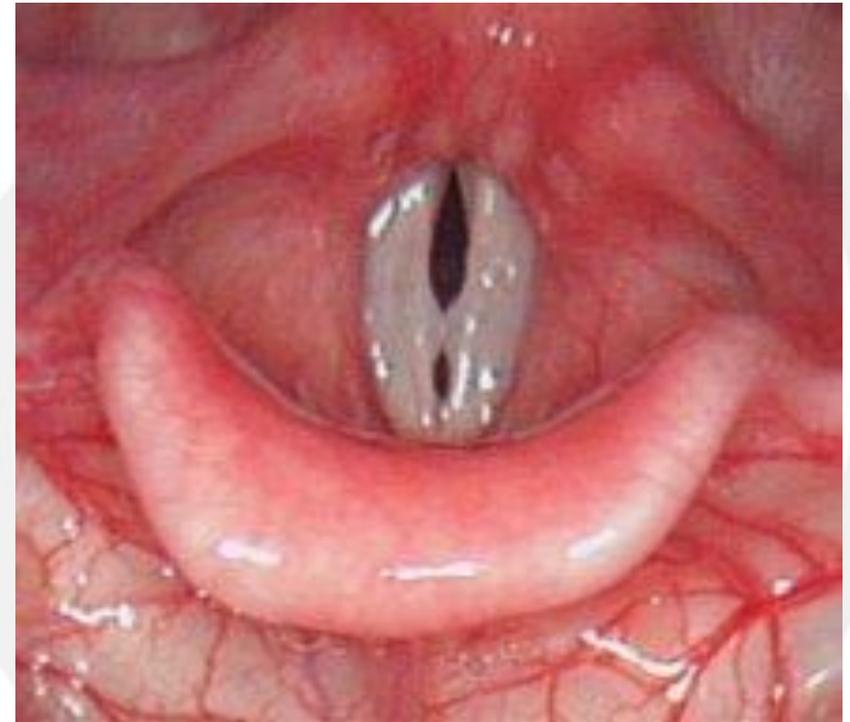

C) Minimal associated pathological lesions (MAPLs) :

1. Vocal fold nodules.
2. Vocal fold polyps.
3. Vocal fold cysts.
4. Reinke's edema.
5. Contact granuloma.

Assessment of dysphonia:

- I. History taking.
- II. Physical examination: APA , ... , neck , ...
- III. Investigations:
 - Audio recording.
 - Digital laryngostroboscopy.
 - Digital laryngokymography.
 - Acoustic analysis (MDVP).
 - Aerodynamic analysis (Aerophone II).
 - GERD (LPR) work-up.
 - CT neck.

KAUH-Strobe Examination Report

Name: Al-Bulaihi, Haila, M Patient ID: 00465849 RKH
Exam Original Date: 3/13/2004 9:46:18 AM

Selected Stills (Image Compression - 15:1)

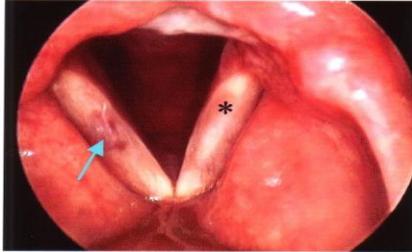

Figure (1) - Fully abducted position

Figure (2) - Fully adducted position

Thank you for referring this patient.

Telescopic videolaryngostroboscopy done, and showed:

I. Continuous light examination:

- ❖ Left vocal fold paralysis (asterisk).
- ❖ Paralytic phonatory glottal gap of about 2-3 mm at maximum width posteriorly (Figure 2).
- ❖ A patch of submucous hematoma at the middle third of membranous part of the right vocal fold (arrow).
- ❖ Mild ventricular hypertrophy.

II. Stroboscopic light examination:

- ◆ Decreased amplitude and mucosal waves on the left vocal fold.
- ◆ Asymmetry in amplitude and mucosal waves between both vocal folds.
- ◆ Aperiodicity in amplitude and glottal cycle time at the left vocal fold.
- ◆ Phase is predominantly open.

Diagnosis:

Left vocal fold paralysis with glottal gap of about 2-3 mm at maximum width posteriorly.

Computerized speech lab. (CSL)

Tamer Mesallam MD

Phonatory Aerodynamic System (PAS)

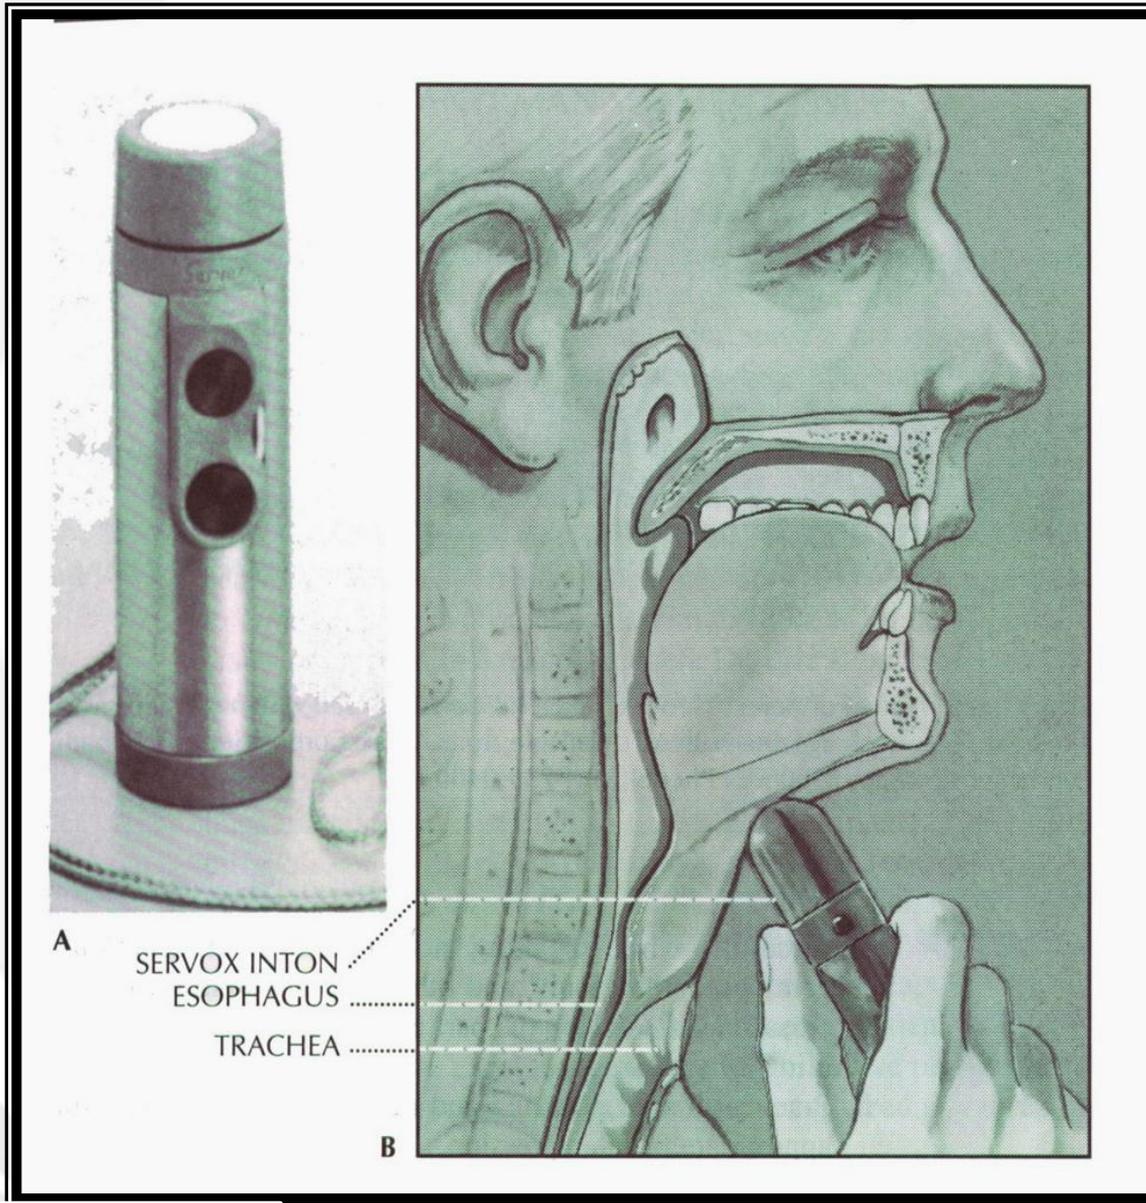

Tamer Mesallam MD

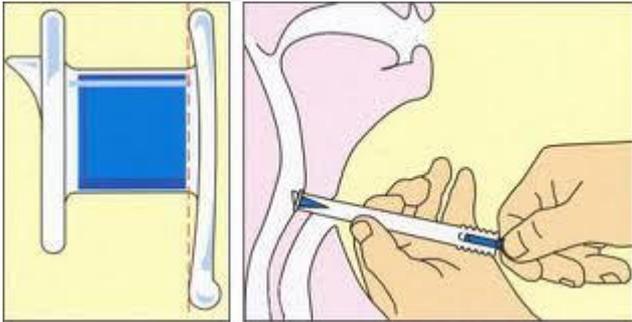

Management of voice disorders:

- Pharmacological agents.
- Surgical procedures (Phonosurgery).
- Technical aid devices.
- Voice therapy.

Tracheo-esophageal puncture

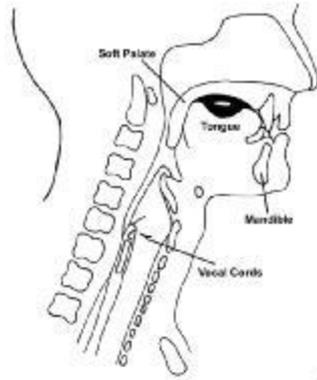

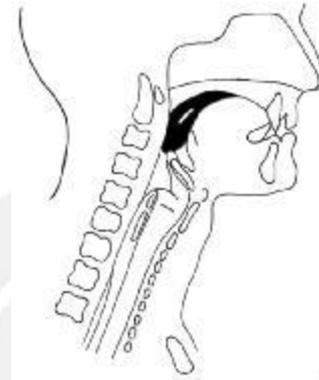

Swallowing Disorders

Tamer Mesallam MD

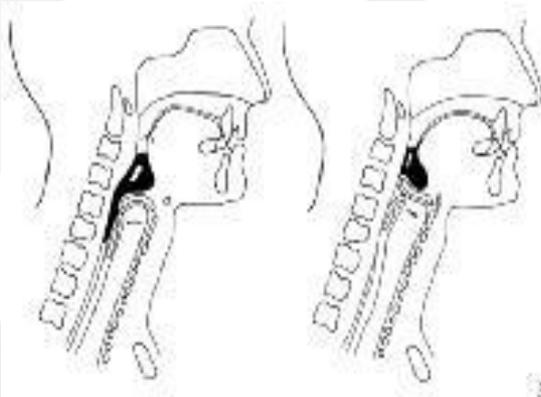

Phases of normal swallowing:

1. Oral preparatory phase

2. Oral propulsive phase

3. Pharyngeal phase

4. Esophageal phase

Definition of dysphagia:

- “Difficulty in moving food from the mouth to the stomach”.
- “Odynophagia” = painful swallowing due to a disorder of the esophagus.

Consequences of dysphagia:

- Dehydration.
- Weight loss.
- Aspiration pneumonia.
- Airway obstruction.
- Loss of joy of eating.

Causes of dysphagia:

Dysphagia

Oropharyngeal

Esophageal

Tamer Mesallam MD

Tamer Mesallam MD

Management of dysphagia:

- Swallowing therapy:
 - Diet modification.
 - Postural techniques.
 - Swallowing maneuvers.
 - Sensory enhancement techniques.
 - Motor exercises.
- Surgical treatment, eg medialization laryngoplasty.
- Medical (Drug) treatment, eg anti-parkinsonism drugs.
- Intraoral prosthesis.
- Alternative routes of feeding, eg NG tube feeding.

Thank You

Tamer Mesallam MD
