

EBM

Dr. Nada A. Al-Yousefi

Assistant Professor & Consultant

Family Medicine Unit

**Department of Family and Community
Medicine**

College of Medicine(KSU)

nalyousefi@ksu.edu.sa

Feb 27, 2014

Motivation: EBM “Successes”

- Theophylline and asthma
 - We were doing the wrong thing
 - Littenberg, 1988
- Beta blockers and MIs
 - We weren't doing the right thing
 - Yusuf, 1987

Uses of “EBM”

- Use of empirically-verified treatments in the care of patients
- Incorporation of research results into the process of care
- Ability to critically appraise research results

What is Evidence-Based Medicine?

- “The integration of individual clinical expertise with the best available clinical evidence from systematic research.”
 - David L Sackett, W Scott Richardson, William Rosenberg, R Brian Haynes *Evidence Based Medicine--How to Practice and Teach EBM*, 1996
 - Various definitions

Individual
Clinical
Expertise

Patient's
Values and
Expectations

Best Available Clinical Evidence

About 10% of
published evidence
is worth reading

About 1/3 of
worthwhile
evidence is
eventually refuted
or attenuated

About 1/2 of
relevant evidence is
not implemented

"...and, as you go out into the world, I predict
that you will, gradually and imperceptibly,
forget all you ever learned at this university."

Steps of ebm

Critical:

careful, exact evaluation
and judgment

Appraise:

To evaluate, &
estimate the
quality, amount
of validity,
results and
applicability

Topic:

A subject of
discussion or
conversation

“Best Available Clinical Evidence”

- **Therapy**
 - Double-blind, placebo-controlled, randomized clinical trial
- **Diagnosis**
 - Independent, blind comparison with a reference standard
- **Prognosis**
 - Representative and well-defined prospective cohort of patients at a similar point in the course of disease
- See [Centre for Health Evidence](#)

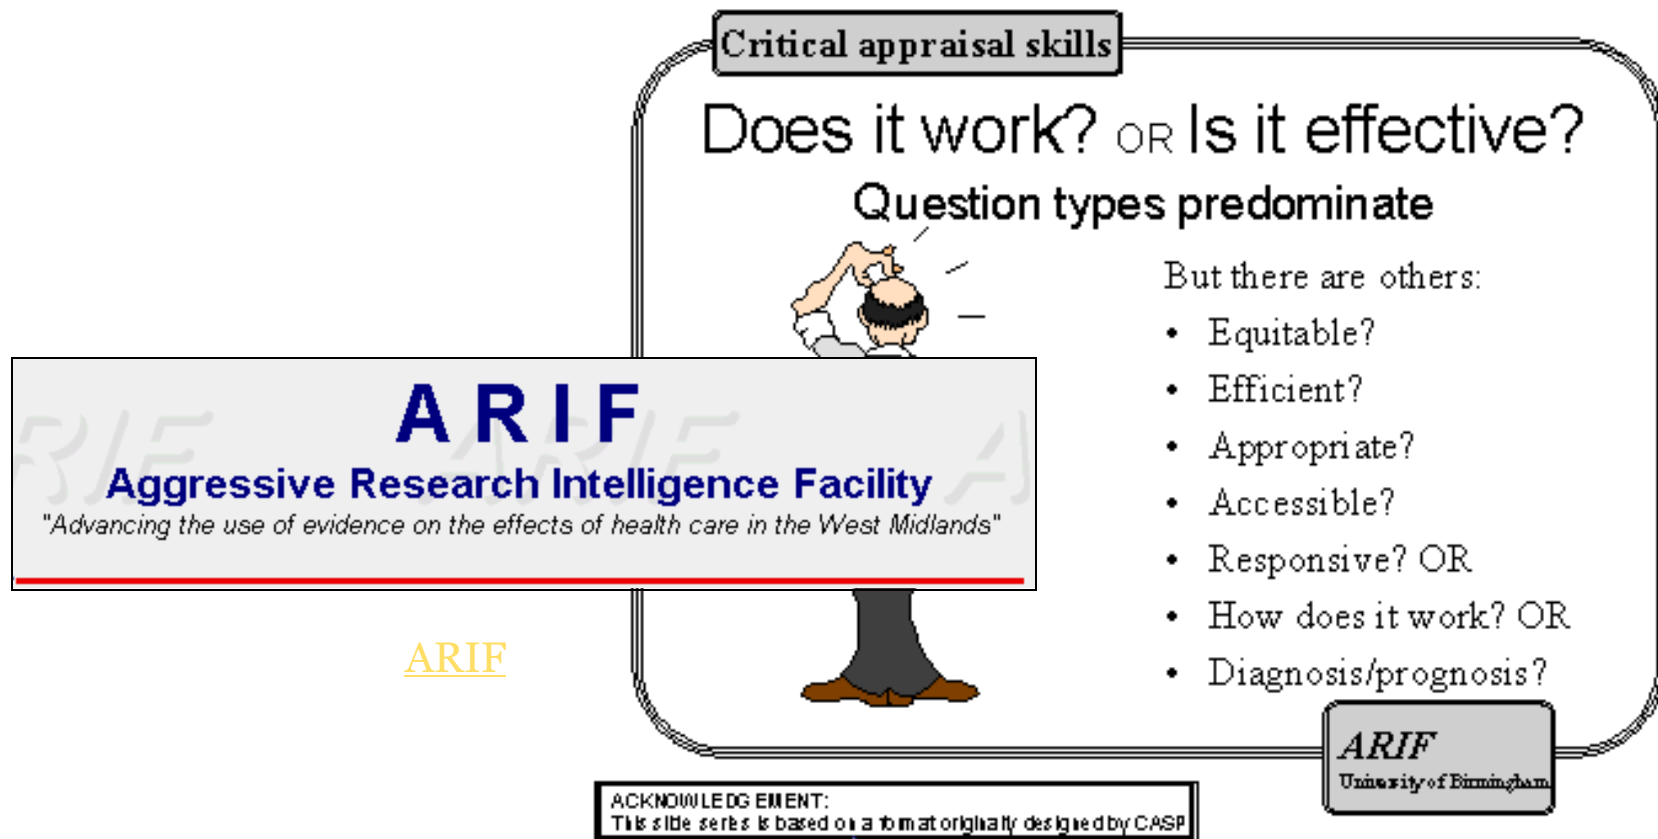

Levels of Evidences

- (I-1) a well done systematic review of 2 or more RCTs
- (I-2) a RCT
- (II-1) a cohort study
- (II-2) a case-control study
- (II-3) a dramatic uncontrolled experiment
- (III) respected authorities, expert committees, etc..
- (IV) ...someone once told me....
 - <http://www.phru.org/casp/>
 - See also [AAFP](#)

“Systematic Research”

- “Meta-analysis”
- “Literature synthesis”
 - From Michael Scriven

Questions

Questions: PICO

	1	2	3	4
	Patient or Problem	Intervention (a cause, prognostic factor, treatment, etc)	Comparison Intervention (if necessary)	Outcomes
Tips for Building	Starting with your patient, ask "How would I describe a group of patients similar to mine?" Balance precision with brevity.	Ask "Which main intervention am I considering?" Be specific	Ask "What is the main alternative to compare with the intervention?" Again, be specific	Ask "What can I hope to accomplish?", or "What could this exposure really affect?" Again, be specific
Example	"In patients with heart failure from dilated cardiomyopathy who are in sinus rhythm..."	"...would adding anticoagulation with warfarin to standard heart failure therapy..."	"...when compared with standard therapy alone..."	"...lead to lower mortality or morbidity from thromboembolism. Is this enough to be worth the increased risk of bleeding?"

USEFULNESS OF MEDICAL INFORMATION

**DISEASE ORIENTED EVIDENCE THAT MATTERS
(DOES)**

**PATIENT ORIENTED EVIDENCE THAT MATTERS
(POEMS)**

DOEs -----> POEM

Drug A lowers cholesterol	Drug A decreases cardiovascular mortality/morbidity	Decreases overall mortality
PSA screening detects prostate cancer most of the time and at an early stage	PSA screening decreases mortality	PSA screening improves quality of life
Corticosteroid use decreases neutrophil chemotaxis in patients with asthma	Corticosteroid use decreases admissions, length of hospital stay, and symptoms of acute asthma	Corticosteroid use decreases asthma-related mortality
Tight control of type 1 diabetes mellitus can keep fasting blood glucose <140mg/dl	Tight control of type 1 diabetes can decrease microvascular complications	Tight control of type 1 diabetes can decrease mortality and improve quality of life

Problems

- Should a 30-year-old woman with recurrent uncomplicated lower UTIs be advised to drink cranberry juice to prevent reinfection?
- For a 63 year old woman with Type 2 diabetes, is gabapentin superior to amitriptyline as first-line therapy for painful peripheral neuropathy?

Educational Prescription

Patient's Name

Learner:

3-part Clinical Question

Target Disorder:

Intervention (+/- comparison):

Outcome:

Date and place to be filled:

Presentation will cover:

- Relavance
- PICO
- search strategy
- search results
- the validity of this evidence
- the importance of this valid evidence
- can this valid, important evidence be applied to your patient

Task

- Well formulated question?
- Formulate the query
- Report back to us on your success
- The whole group reports back in a week

Search for the Best Evidence

- ~~Review articles~~
- Community/professional standards
- Systematic reviews
- Original results

What are the Sources of Good Evidence?

The Johns Hopkins Medical Institutions

Libraries & Cultural Resources combines the expertise and services of many of the University's

information providers to assure provision of full access to the best information in a variety of formats and media. The Libraries and Cultural Resources family includes Archives and Special Collections, University Libraries and University Press. Libraries and Cultural Resources seeks to fully align its information services with the teaching, learning, research, service and administration needs of the University. We are evolving a family of collaborative services that seeks single points of service, both electronic and physical, for our communities. This approach places the emphasis on the needs of our diverse users rather than on sustaining organizational boundaries.

In all our endeavours, our focus is on developing quality collections, quality programs, quality publications and innovative services that will assist the University in its mission to seek truth and disseminate knowledge.

Saudi Digital Library

Saudi Digital Library is one of the pioneer projects of NCEL aiming at enhancing the education process in the Kingdom of Saudi Arabia.

The project objective is to support the learning and educational aspects in general and e-learning and distance learning particularly. It is also aims at covering the requirements of scientific research as well as empowering competency and building a knowledge society.

E-learning service is one of the main objectives of the digital library as it supports the digital curricula with sources and resources important to both learner and teacher. The service also improves and expands the awareness levels and facilitates sharing of information.

The library contains approx. 90,000 titles of digital books and resources from leading publishing houses...all are available for university student and faculty staff.

What is Digital Library+?

DL+ is an advanced system which gives you simple and one step access to all your electronic resources at the Saudi Arabia Consortium Digital Library.

You can browse and search all your **Databases, E-Journals, E-Books & References** in our digital library **Alphabetically (A-Z)** or by subject and also find the relevant ranking information.

You can easily personalize your digital library by **Registering yourself** in DL+ and selecting your favorite topic from more than 280 detailed subject areas.

Have You Registered?

First Time Users: You can register your university has acquired

1. Select your institution
 2. Follow and fill in the registration form and password
 3. Upon completion, you will receive an email with your access and information
 4. You may then log in to the system using your username and password

Restoration of sinus rhythm

- Measures to convert **atrial fibrillation** to sinus rhythm should be undertaken if sinus rhythm does not restore after decrease of heart rate and correction of possible heart failure **[B]**.
- Direct current electroversion is recommended if the patient:
 - Has used several antiarrhythmic drugs
 - Is hypotensive
 - Is in a critical condition because of the arrhythmia
 - Has chronic **atrial fibrillation**
- Drugs used in this indication include flecainide and propafenone; previously, quinidine 0.2 grams 3 times at 2-hour intervals was often used. Monitoring the patient during conversion of the rhythm, and for at least 3 hours after that, is recommended because of the risk of ventricular tachycardia.

Definitions:

Levels of Evidence

A: Strong research-based evidence. Multiple relevant, high-quality scientific studies with homogenic results.

B: Moderate research-based evidence. At least one relevant, high-quality study or multiple adequate studies.

C: Limited research-based evidence. At least one adequate scientific study.

D: No scientific evidence. Expert panel evaluation of other information.

مصادر المعرفة الصحية

تُعنى مصادر المعرفة الصحية بدعم القرار الطبي بالأدلة بواسطة آراء الخبراء والمتخصصين في الشأن الصحي عالمياً، ومن ثم تحظى هذه المصادر بثقة الأطباء لاستخدامها كمراجع في اتخاذ قرارات الرعاية الصحية الصائبة.

وإيماناً من وزارة الصحة بأهمية هذه المصادر لاكتساب المعرفة الطبية في مجال الرعاية وجودتها، فقد حرصت على تيسير الوصول إلى محتوى أهم المصادر المتخصصة في هذا الشأن، وذلك عبر الحاسب أو الجوال، ومن أهم هذه المصادر ما يلي:

مصادر المعرفة الصحية: UpToDate®

مصادر المعرفة الصحية: BMJ Learning

Antiarrhythmic drugs to maintain sinus rhythm after cardioversion in atrial fibrillation: Recommendations

[Morton F Arnsdorf, MD](#)

UpToDate performs a continuous review of over 270 journals and other resources. Updates are added as important new information is published. The literature review for version 10.1 is current through December 2001; this topic was last changed on November 9, 2001. The next version of UpToDate (10.2) will be released in June 2002.

GENERAL PRINCIPLES — DC shock and antiarrhythmic drugs are usually effective in converting atrial fibrillation (AF) to a sinus mechanism, thereby improving symptoms, lessening the liability for the development of a tachycardia-induced cardiomyopathy involving the ventricles and atria, and minimizing the long-term risk of peripheral and cerebral emboli. ([See "Restoration of sinus rhythm in atrial fibrillation: Recommendations"](#)).

However, maintenance of normal sinus rhythm (NSR) is often problematic. Only 20 to 30 percent of patients who are successfully cardioverted will maintain NSR for more than one year without chronic antiarrhythmic therapy [[1-7](#)]. The risk of recurrence is highest in the patient who has hypertension, an enlarged LA, AF for more than one year, or heart failure [[8](#)]. On the other hand, patients who are most likely to maintain NSR usually have one or more of the following characteristics:

- LA size less than 4.5 or 5 cm

ANTICOAGULANTS FOR ACUTE ISCHAEMIC STROKE

Gubitz G, Counsell C, Sandercock P, Signorini D

Date of most recent substantive amendment: 22 February 1999

This review should be cited as: Gubitz G, Counsell C, Sandercock P, Signorini D. Anticoagulants for acute ischaemic stroke (Cochrane Review). In: *The Cochrane Library*, Issue 2, 2003. Oxford: Update Software.

ABSTRACT

Background

Most ischaemic strokes are caused by blood clots blocking an artery in the brain. Clot prevention with anticoagulant therapy could have a significant impact on patient survival, disability and recurrence of stroke.

Objectives

The objective of this review was to assess the effect of anticoagulant therapy in the early treatment of

Anticoagulants or antiplatelet therapy for non-rheumatic atrial fibrillation and flutter

Segal JB, McNamara RL, Miller MR, Powe NR, Goodman SN, Robinson KA, Bass EB

Main results: Fourteen articles were included in this review. Warfarin was more efficacious than placebo for primary stroke prevention {aggregate odds ratio (OR) of stroke=0.30 [95% Confidence Interval (C.I.) 0.19,0.48]}, with moderate evidence of more major bleeding { OR= 1.90 [95% C.I. 0.89,4.04]}. Aspirin was inconclusively more efficacious than placebo for stroke prevention {OR=0.68 [95% C.I. 0.29,1.57]}, with inconclusive evidence regarding more major bleeds {OR=0.81[95% C.I. 0.37,1.78]}. For primary prevention, assuming a baseline risk of 45 strokes per 1000 patient-years, warfarin could prevent 30 strokes at the expense of only 6 additional major bleeds. Aspirin could prevent 17 strokes, without increasing major hemorrhage. In direct comparison, there was moderate evidence for fewer strokes among patients on warfarin than on aspirin {aggregate OR=0.64[95% C.I. 0.43,0.96]}, with only suggestive evidence for more major hemorrhage {OR =1.58 [95% C.I. 0.76,3.27]}. However, in younger patients, with a mean age of 65 years, the absolute reduction in stroke rate with warfarin compared to aspirin was low (5.5 per 1000 person-years) compared to an older group (15 per 1000 person-years). Low-dose warfarin or low-dose warfarin with aspirin was less efficacious for stroke prevention than adjusted-dose warfarin.

Reviewers' conclusions: The evidence strongly supports warfarin in AF for patients at average or greater risk of stroke, although clearly there is a risk of hemorrhage. Although not definitively supported by the evidence, aspirin may prove to be useful for stroke prevention in sub-groups with a low risk of stroke, with less risk of hemorrhage than with warfarin. Further studies are needed of low- molecular weight heparin and aspirin in lower risk patients.

TRIP Database

[Website](http://www.tripdatabase.com)

The screenshot shows the TRIP Database website. At the top is the TRIP Database logo. Below it is a navigation bar with links: Virtual Learning Centre, What's New, About the TDB, Add the TDB your site, Contact Us, Virtual Learning Centre, and Disclaimer. The main content area is divided into two columns. The left column contains a description of the TRIP Database, search options (SEARCH BY TITLE and SEARCH TITLE & TEXT), a search bar with the text 'atrial fibrillation', a GO button, and a WARNING section. The right column contains a welcome message and a large empty search results area.

TRIP Database

Virtual Learning Centre :: What's New :: About the TDB :: Add the TDB your site
:: Contact Us :: Virtual Learning Centre :: Disclaimer

The TRIP Database searches over 55 sites of high-quality medical information. The TRIP Database gives you direct, hyperlinked access to the largest collection of 'evidence-based' material on the web as well as articles from premier on-line journals such as the BMJ, JAMA, NEJM etc.

PubMed Clinical Query

National Library of Medicine PubMed

The screenshot shows the PubMed Clinical Query interface. At the top, there are tabs for 'PubMed', 'Nucleotide', 'Protein', and 'Genome'. Below these is a search bar with 'PubMed' selected in a dropdown menu, followed by a 'for' label and a search input field. To the right of the search bar are 'Go' and 'Clear' buttons. Below the search bar is a row of links: 'Limits', 'Index', 'History', and 'Clipboard'. On the left side, there is a sidebar with the following links: 'About Entrez', 'Entrez PubMed', 'Overview', 'Help | FAQ', 'PubMed Services', 'Journal Browser', 'MeSH Browser', 'Single Citation Matcher', 'Batch Citation Matcher', 'Clinical Queries' (highlighted with a red circle and a mouse cursor), and 'Related Resources'. The main content area has a yellow background with the text: 'PubMed is the National Library of Medicine's search service that provides access to over 10 million citations in MEDLINE, PreMEDLINE, and other related databases, with links to participating online journals.' Below this, there are two sections: 'Books linked to PubMed' and 'The New PubMed!'. The 'Books linked to PubMed' section features a book cover for 'Molecular Biology of the Cell' and text stating: 'In collaboration with book publishers, NCBI is adapting books for the web and linking them to PubMed. The first book, *Molecular Biology of the Cell* by Alberts et al., is now available.' The 'The New PubMed!' section states: 'This new version of PubMed has a single search interface with pull-down menus that display search field limits, indexes, your search history, and a clipboard for gathering selected articles. See [help](#) and [FAQ](#) for more information.'

Clinical Queries using Research Methodology Filters

This specialized search is intended for clinicians and has built-in search "filters" based largely upon [Haynes RB et al.](#) Four study categories--therapy, diagnosis, etiology, prognosis--are provided, and you may indicate whether you wish your search to be more sensitive (i.e., include most relevant articles but probably including some less relevant ones) or more specific (i.e. including mostly relevant articles but probably omit a few). See [this table](#) for details regarding filtering.

Indicate the category and emphasis below:

Category: ☒ therapy ☐ diagnosis ☐ etiology ☐ prognosis

Emphasis: ☒ sensitivity ☐ specificity

Enter subject search (do not repeat any of the words above):

Question (points to the Category section)

Context (points to the Emphasis section)

Exercise

- Use the MeSH Database to build a strategy that will find citations to references discussing the economics of community-acquired pneumonia.

Exercise

- Use the NLM Catalog Journal search page to see if PubMed includes the journal, *Molecular Microbiology*. If so, retrieve all PubMed citations from this journal.

Exercise

- Use the Clinical Queries to find systematic reviews for accidents caused by sleep deprivation.

Search

- What role does pain have in sleep disorders?

Search

- To search for citations to articles written by Bonnie W. Ramsey about gene therapy for cystic fibrosis

Search

- To search for citations to articles about drosophila in the journal Molecular Biology of the Cell

Exercise

- Find citations to articles about the ethics of liver transplantation. Check Details to see how the terms are mapped. Filter to review articles. Select a few items and add them to the Clipboard. Go to the Clipboard and view the selected items in Abstract format to see the assigned MeSH terms.

Exercise

- Use the MeSH Database to build a strategy that will find citations to articles about schizophrenia resulting from prenatal exposure to influenza. Schizophrenia and influenza should be the major topics of the articles.
