

TUTORIAL SESSION
Lymphadenopathy & Hepatosplenomegaly

PROF. FAHAD AL ZAMIL

CASE 1:

3 years old male Saudi boy brought to the clinic with the history of low grade fever for 7 days and loss of appetite. The mother mentions that she noticed a mass in his abdomen while changing his clothes.

Question: How do you approach this child?

CASE 2:

5 years old Saudi girl brought to the clinic with history of low grade fever for 7 days, pallor for 1 month and the mother noticed swelling both in her axil and neck area.

Question: How would you approach this girl?
