Grants and Funding

Version 1.0

Prepared by

Vice Deanship for Postgraduate Studies and Research
College of Medicine, King Saud University

Foreword

Medical research is a crucial component of the advancement of healthcare and the betterment of human lives. To conduct research, funding is a critical component and this is where research grants come into play. A research grant is a financial award provided to an individual or a team of researchers to support research costs. Research grants are essential because they provide the necessary resources to carry out in-depth research and investigation. They allow researchers to explore new ideas, test hypotheses and advance knowledge in a specific field.

Getting a research grant can be a challenging process. It requires careful planning, a thorough understanding of the funding agency's goals and requirements, and a well-written proposal that demonstrates the potential impact of the research. Various research grants are available, including government agencies, private foundations, and universities. To find the right grant opportunity, it is important to do your research and understand each funding agency's specific requirements and goals.

This booklet provides valuable information on where to find research grants for medical research in Saudi Arabia. We hope this will prove to be a useful resource for researchers seeking funding for their research projects. This is the first edition (version 1.0) of the book and we encourage the users to contribute to improving it as more information becomes available.
